TITLE: TR-0 heavy water zero-power reactor of Nuclear Research Institute of Czechoslovakian Academy of Sciences

SOURCE: Jaderna energie, no. 5, 1966, 161-165

TOPIC TAGS: research reactor, heavy water

ABSTRACT: The zero-power heavy water reactor TR-0, a pulsed neutron source and an exponential heavy water system, is described. This reactor has rod-shaped fuel elements of natural uranium. The active zone has a diameter of 3500 mm and a height up to 4000 mm. Its auxiliary layout was selected so that long-term studies on heavy water reactor lattices could be carried out. The principles of the long-term experimental program are outlined. The engineering solutions with respect to the reactor vessel and its system for the automatic adjustment of the lattice support and to the reactor circuits are described. The principal circuits considered are the heavy water circuit and the inert gas circuit in which dry air is used. A brief description is given of the construction work. This article was presented by F. Klik. Orig. art. has: 2 figures and 6 tables. [NA]

Metal

The Use of Wooden Frames in the Pouring of Steel. K. Riha. (*Hutník*, (Prague), 1953, 3, (11), 246–248). [In Czech]. A crust of slag floating on the rising metal surface in the bottom-pouring of steel is objectionable as it is likely to stick to the mould wall and may cause inclusions. Control of this crust through variations in the pouring-rate is insufficient. Frames of soft wood, dried at 70° C. for 48 hr., fitting just inside the mould, are inserted into the empty mould, close to the bottom. The rising steel ignites the frames which burn slowly, as the moulds are covered and little air enters. Combustion products aid the mould dressing, the frame prevents any slag crust from floating to the edges of the mould, and the dilution of the air by combustion products reduces the rate of surface oxidation of the steel. If the frames are correctly dried and dimensioned the risk of gas bubbles at the mould walls is slight. Good results are claimed. With some low-grade steels the rejects of products forged from them has been reduced by 30%.—P. F.

1380. RIHA V. Tuberk. Odd. KÚNZ. Olomouc. *Imunobiologicke reakce u dospelého obyvatelstva zemedelske oblasti. Immunobiological reactions in the inhabitants of an agricultural district ROZHL. TUBERK. 1956. 15/10 (456-463) Tables 3

A report is presented on the results of immunobiological tests carried out in 31,684 adult subjects in 2 agricultural districts, together with fluorographic examination. Reactions to the BCG test in 10,874 men and 15,131 women are described. Positive reactions to the BCG test and to the Mantoux test with 10 tuberculin units are compared for various age groups of both sexes. The curve for positive allergic reaction for these age groups has 2 peaks. The first in the younger groups, who had been given BCG vaccination; the second, corresponding to post-infection allergy, occurs in men between the ages of 30 to 40 and in women from 40 to 50. In women, positive reaction in the vaccinated group is higher than the maximum positive reaction of post-infection allergic tests. After 40 (or 50) there is a decline in positive reaction. Bacterial allergy dies down with increasing age more rapidly than allergy to tuberculin. Both types of allergy show bigger variations in men than in women. Some causes of differences in positive reaction to the tests in various parts of agricultural areas are pointed out. (XVII, 15)

TITLE: Method of treating manganese ores to obtain higher oxides of Mn

SOURCE: Hutnicke listy, no. 1, 1965, 72

TOPIC TAGS: metal melting, manganese, manganese compound, sulfuric acid

ABSTRACT: Article is an abstract of Czechoslovak Patent Application Class 40a, 47/00, PV 421-64, dated 24 Jan 64. Solid sulfates, preferably the monohydrate are exposed at 900°C to a mixture of steam and nitric acid vapors. In the reactor Mn is oxidized, and sulfuric acid regenerated. Reaction space vapors are cooled to recover sulfuric acid as a condensate, while nitric oxides are recovered in the usual manner. The advantage of the process is that Mn is recovered as solid oxide suitable for metallurgical uses, and sulfuric and nitric acids are regenerated.

3433. ARC SUPPRESSION COIL WITH CONTINUOUS REGULATION. J.Kopeček and V.Říha. 621.316.933

Elektrotech. Obzor, Vol. 48, No. 12, 688-90 (1959). In Czech.

The inductive reactance of an arc suppression coil should be equal to the capacitive reactance of the transmission line for correct functioning. The design provides a coil in which continuous regulation of the reactance is achieved by the variation of an airgap in the magnetic circuit of the coil, so that tappings for varying the number of turns become unnecessary. The shell-type apparatus of 800 kVA, 50 c/s, 23/√3 kV rating has a concentric cylindrical core, split in a plane of the axis, consisting of radially disposed laminations. The cores may be displaced by a control gear radially, so that a gap of 2.5 mm or less will result. The reactance can be adjusted to a ratio of 1 : 10, i.e., from 6 to 60 amp. current. The losses of the apparatus are 11.5 kV. The weight is 3350 kg, including 1080 kg of oil.

TITLE: Method for treating phosphorus containing ferromanganese ores

SOURCE: Hutnicke listy, no. 3, 1965, 219

27

TOPIC TAGS: sulfuric acid, phosphorus, ferromanganese, oxidation

ABSTRACT: The article is an abstract of Czechoslovak patent application Class 18a 1/04 PV 6186, dated 9 Nov. 1963. The ore is repeatedly leached by sulfuric acid; the solution obtained has a pH of 1 - 3, and the reaction mixture is heated to 60 - 100°C, and at the same time oxidized by hydrogen peroxide ; the oxidation is continued until the bulk of phosphorus is eliminated, when a new amount of ore is added, corresponding to the remaining P content in the ore. The content of Fe can be adjusted by addition of iron ore. The iron content in the filtrate may be adjusted by an oxidizing agent, such as a peroxide of manganese or hydrogen. [JPRS]

Pulmonary function was studied in 34 patients, 23 of whom had partial resection and the remaining 11 pneumonectomy, both before and after operation, by means of total spirometry and simultaneous bronchospirometry. Particular attention was paid to the residual air which was estimated separately for each lung in several patients. After lobectomy with partial thoracoplasty reduction of oxygen consumption on the side operated upon was approximately identical with that following upper lobectomy without additional collapse. Lung function after operation improves as time passes but relative reduction of vital capacity per min. may occur. In the presence of reduced expiration speed a reduction of the absolute one minute vital capacity may arise. The importance of sparing resection and meticulous after-care for later lung function is stressed.

Říhánek, Ladislav V. and Postranecký, Josef, **Bouřky a ochrana před bleskem.** [Thunderstorms and lightning protection.] Prague, Československá Akademie Věd, 1957. 507 p. numerous figs., 5 charts fold., refs., bibliog. p. 473–478. Review (in Czech) by J. Podzimek in *Meteorologické Zprávy*, 11(2):52–53, 1958.—In this thorough monograph, problems of thunderstorm electricity and lightning protection are treated in a general and an applied section. The general section includes a brief discussion of atmospheric structure and circulation and a thorough review of theories and knowledge on atmospheric ionization, electrical fields in the atmosphere, the formation of convective clouds, thundercloud electrification, classification of thunderstorms, thunderstorm distribution over the globe and in Czechoslovakia (map, tables, graphs), the structure and mechanism of various types of lightning strokes, electrical currents induced by lightning and their measurement, grounding under various soil conditions, etc. A survey is also made of thunderstorm and lightning research in various countries (p. 147–205) including the U.S.S.R., Sweden, Switzerland, U. S., Great Britain, Germany and Czechoslovakia. An extensive chapter on instruments and techniques (p. 205–294) concludes the general section. The whole section is profusely illustrated with explanatory diagrams, photographs of lightning and of instruments, block diagrams, sample records, etc. (illustrations are, to a large extent, reproduced from foreign literature). The second (applied) section was written for lightning rod designers and inspectors. It contains excerpts from the Czechoslovak official specifications for the protection requirements of different objects, and detailed review and comparison of the Soviet, American, British, Polish, Swiss, South African, Swedish, Dutch and German specifications. Numerous examples of lightning rod design for various structures are given in diagrams and photographs. Added features which contribute to the interest of the book are: a historical summary from FRANKLIN, LOMONOSOV and DIVIŠ (first grounded lightning rod, 1754) to the present; a bibliography of Czechoslovak and foreign literature (some 450 items listed by author, title and source) which supplements the lists of references given at the end of each chapter; a polyglot dictionary (Czech-Russian-English-French-German) of over 600 meteorological and electrical terms; a list of symbols, abbreviations and units; a short glossary of technical and engineering terms

Říhánek, Ladislav V., Engineer, and Josef Postránecký, Doctor, Engineer

Bouřky a ochrana před bleskem (Thunderstorms and Protection from Lightning) Praha, Nakladatelství Československé akademie věd, 1957. 507 p. (Series: Československá akademie věd. Sekce technická. Studie a prameny) 2,300 copies printed.

Sponsoring Agency: Československá akademie věd. Sekce technická.

Scientific Ed.: Josef Stránský, Professor, Engineer, Doctor, Corresponding Member, Czechoslovak Academy of Sciences; Reviewers: Bohumír Novák, Engineer, and Josef Podzimek, Doctor of Natural Sciences; Resp. Ed.: Ladislav Hrdina; Tech. Ed.: František Končický.

PURPOSE: The book is intended for electrical engineers and scientists specializing in problems of protection from lightning

COVERAGE: This is a comprehensive scientific survey of lightning phenomena and lightning protection devices. The book is divided into a theoretical part which discusses the nature of lightning, surge phenomena, and instrumentation. The practical part is devoted to methods of installing

lightning arresters. The book presents both Soviet-bloc and Western theories, instruments, and standards. The first part deals with measurement and recording practices, the theory of magnetic links, surge propagation, and the concept of surge voltage distribution patterns. The practical part outlines means of protection, types of arresters, protective ranges of conductors, and apparatus against overvoltage caused by surges. A 600-term glossary of Czech terms with equivalents in four languages is appended. Acknowledgements are extended to: Josef Stránský, Professor, Doctor, Engineer; Bohumír Novák, Engineer (deceased); Josef Podzimek, Doctor of Natural Sciences; Mirko Zapletal, Engineer; Bedřich Fröhlich, Engineer; and Vojtěch Rohlíček, Engineer. There are approximately 450 references, mostly Western.

AUTHORS: Doležalík, Vítězslav, Říhánek, Stanislav, Foniok, Alfred

TITLE: Preparation of pure formaldehyde with a low content of formic acid

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 2, 1963, 401, abstract 2N24 (Czechosl. patent 100705, Aug. 15, 1961)

TEXT: The mixture obtained by dehydrating an aqueous solution of CH_2O in the presence of an aliphatic or alicyclic alcohol is distilled in the presence of an organic liquid forming no stable compounds with the components of the mixture, and having a boiling point $< 120^{\circ}C$. It is more convenient to use a liquid that has a relatively high vapor pressure and is able to absorb alcohols, HCOOH, and water from gaseous CH_2O. Such liquids are, e.g. water-soluble ethers [n-dioxan (I), trioxan, $(CH_3OCH_2)_2$], and also C_6H_6, C_6H_{14}, cyclohexane. The dissociation of the dehydrated mixture in the presence of a liquid, having a boiling point lower than the

dissociation temperature of the mixture, takes place at temperatures $< 120°C$. There is no increase in the acidity of the product, as the Cannizzaro reaction does not occur. An example: 71.5 parts of 58%-aqueous solution of CH_2O and 60 parts of cyclohexanol are introduced into a still and water is removed by vacuum distillation. With water, 1.5 parts of CH_2O are also removed. Subsequently, 100 parts of water-free I are added into the still and boiling is conducted at the usual pressure. I returns to the still from the reflux condenser, whereas the condenser discharges the purified and water-free CH_2O, containing 33% less of HCOOH than the raw material. [Abstracter's note: Complete translation.]

Title : The Possibility and Methods of Selection in Bees.

Orig. Pub. : Socialist, kmet., 1957, 8, No 1-2, 38-44

Abstract : The harmful effects of breeding closely related bees have been proven by the experiments of O. Makenzen, as well as by the studies of Taranov, Winkler, Armorister, and others; it is noted that up to 70 percent of eggs are destroyed in the seventh generation, that the body's size is reduced by 2-5 percent, that the length of the proboscis decreases by 4.6 percent, that the resistance becomes lower and diseases occur. An experiment was set up at the

TITLE: Shell bodywork from sandwich panels, CZ Pat. No. PV 5802-64. Class 63

SOURCE: Vynalezy, no. 12, 1965, 25

TOPIC TAGS: foam plastic, sandwich structure

ABSTRACT: A shell bodywork of sandwich panels is described which is made from foam plastics between two cases. The distinguishing feature of the device is that the profiles are fixed to the panels by the bending of the cases around the frame of the profiles which have the form of a die and a punch which are wedged against the frame of the adjoining profile for joining the panels.

"Clinical Importance of the Determination of Thrombocyte Life Span I."

Budapest, Orvosi Hetilap, Vol 108, No 7, 12 Feb 67, pages 299-302.

Abstract: [Authors' Hungarian summary] The life span of thrombocytes was determined by means of Cr^{51} labelling. The syndromes accompanied by thrombopenia are classified on the basis of bone marrow cytology and immune serological data. 1) A decreased thrombocyte life span was observed in numerous syndromes in which a normal or decreased number of megakaryocytes were present in the bone marrow. Similarly, a decreased life span was observed in diseases accompanied by megakaryocytic hyperplasia as well. Idiopathic thrombopenic purpura, in which a normal life span has also occurred at the time of remission, was also classified in this group. 2) Another group was formed by diseases based on a defective blood-platelet formation with a normal thrombocyte life span. 2 Eastern European, 23 Western references.

TITLE: Structure of the subtilis-polyglutamic acid

SOURCE: Academia scientiarum hungaricae. Acta chimica, v. 43, no. 2, 1965, 161-163

TOPIC TAGS: organic synthetic process, polymer, glutamic acid, nonmetallic organic derivative

ABSTRACT: A method was described with the aid of which it is possible to obtain γ-L- and γ-D-polyglutamic acid at a yield of 25% from the dipeptide L-L- and D-D-p-nitrophenyl ester. The nitrophenyl ester was synthesized from carbobenzoxy-glutamic acid-α-methylester-γ-p-nitrophenyl ester by coupling it with the aid of glutamic acid-α-methyl ester to yield carbobenzoxy-γ-glutamylglutamic acid-α,α'-dimethyl ester. The mechanisms of the reactions involved were discussed in terms of the structure of subtilis glutamic acid polymer. [JPRS]

Title : Effect of Antibodies in Nutritive Medium on the Growth of Salmonella Paratyphi B.

Orig Pub : Ceskosl. mikrobiol., 1956, 1, No 2, 59-62

Abstract : When Salm. paratyphi B was inoculated on a nutrient medium, to which was added rabbit serum immunized by this organism, no effect of antibodies was observed either on the growth of Salmonella, or on their biochemical activity even after 31 transfers. A decreased virulence appeared simultaneously with the transition of phase S into R. Addition of antibodies to a suspension of S. paratyphi B. caused an increase of metabolic activity of the organisms (greater consumption of O_2), which was not
