M.I.A.S. BULLETIN

A COMMUNICATION FROM THE MONROE INSTITUTE OF APPLIED SCIENCES

#PR31280

HEMISYNC SEMINARS

The purposes of the Hemisync Seminars are to familiarize the individual with the methods and techniques developed by the Institute, and to explore the application of such processes in specific areas of interest. The Seminars are open only to Professional Members of the Institute and their associates.

Each Seminar is conducted by a Professional Member or researcher experienced in Institute methods and techniques. The early periods are devoted to exposure of the participant to Hemisync as a subjectively direct and personal experience. This is followed by demonstrations, reports, and discussion of related applications then completed and available. The later periods are devoted to synthesis of appropriate patterns of treatment in the designated areas of specialization. The Center, on the Institute grounds in Virginia, is uniquely designed and equipped to s serve these functions.

The Sessions are held periodically at the Center in Virginia, generally on a long weekend from Thursday evening through Sunday afternoon. Attendance is held to a maximum of twenty, with food, housing, and materials included. Registration Fee per participant is $285.00. Reservations in advance...a deposit of $50.00 is required due to a limited space available.

The following Professional Seminars have thus far been scheduled in 1980. Each will be conducted provided there is sufficient interest in the proposed content. A Professional member may attend more than one Seminar if he so desires.

STRESS-TENSION: Control, learning to cope, perspectives.
GENERAL ANALYSIS TECHNIQUES: In group and individual therapy.
CHRONIC PAIN CONTROL: Specific treatment, familial ancillaries.
WORKING WITH CHILDREN: Autistic, disturbed, retarded.
DE-HABITUATION: Drug and alcohol abuse, treatment of both physiological and psychological addiction.
ADVANCED LEARNING: Accelerated, rate techniques, synthesized experiences, problem solving.
REHABILITATION: New approaches to behavior modification in prison inmates and similar personalities.
TERMINAL CASE: For treatment of both patient and family.
