The objection that blood transfusion may stimulate neoplastic growth is countered by the statement that the blood to be used can be evaluated as to its hormone content, e.g., one should use the blood of a young female donor when estrogen therapy is indicated. Results are reported of blood transfusions administered in two Odessa institutions to 337 patients with various types of neoplasms. A beneficial effect (higher blood pressure, increased body weight, improved appetite) was noted in 270 cases. The princi-

(7 figs. omitted).
Order from LC or SLA mi$1.80, ph$1.80 61-15056

Trans. of Swedish patent 135,902, cl. 72 b; 3, by See Fabriks Aktiebolag, appl. 29 Apr 50, granted 28 Feb 52, pub. 27 May 52.

An archer's bow with limbs of highly resilient material (e.g., hardened steel tubes) is described that is characterized in that each bow limb close to the bow middle or fastened to the handle is bent backward with respect to the shooting direction in a sharp bend and has at least over a greater portion of its length a relatively slight forward curving with respect to the shooting direction. The bending and curving are adapted to each other in such a manner that in the strung position each bow limb is substantially straight between the bend and the contact point of the string, (Engineering, TT, v. 5, no. 4) (over)
