The Dutch Resistance and the OSS

Stewart Bentley

On 10 May 1940, the German 10th Army, spearheaded by airborne troops, invaded the Netherlands. The rest of the Wehrmacht force committed to "the overrunning of the West" executed the Manstein Plan through Belgium and the Ardennes Forest. On 14 May 1940, the Dutch commander ordered a cease-fire. Three days later, the entire Netherlands was occupied by Nazi Germany.

The Netherlands royal family, led by Queen Wilhelmina, along with some 4,600 Dutch officers, sailors, soldiers, and policemen, staged a Dutch Dunkirk, assisted by remnants of the country’s Navy and the entire merchant marine. This evacuation to Britain of the royal family and a cadre of the Dutch Government was critical in establishing a government-in-exile and the initial intelligence networks in Holland. Additionally, the emigration to Britain of Netherlands military people and civilians from all over the Continent and from overseas Dutch possessions helped form the core of a reconstituted Dutch Royal Army, Navy, and Air Force.

Stirrings of Resistance

The initial years of the German occupation of Holland were characterized by the removal of Dutch Jews from their homeland and harsh economic and political measures. The Nazis set up a puppet government at The Hague headed by Dr. Seyss-Inquart and established a Dutch National Socialist Party. Some Dutch citizens eagerly joined the new party and took positions in the government. Others, however, joined with the purpose of pretending to collaborate while remaining loyal to the government-in-exile. Their positions enabled them to keep an eye on Dutch collaborators and to influence policy-making and implementation. The Leegsma family provided a good example of this tactic. Agardus Leegsma, his brother, and their father joined the Nazi-organized Dutch National Police. The father had been a professional soldier in the Guards Regiment of the Royal Dutch Army during the interwar years. The family assisted various Resistance organizations during the Nazi occupation. During the liberation of the Netherlands, Agardus Leegsma and his brother joined different Allied units, serving as guides and combatants.

As the harshness of the occupation grew, so did Dutch unrest and resentment toward the Germans. Individual Dutchmen took it upon themselves to strike back. With no central command, these brave individuals began recruiting relatives, friends, and neighbors into the first Resistance organizations. The dangers were exceptionally high: captured members of the Resistance were usually shot or sent to concentration camps. The primary anti-Nazi activity came initially from the Social Democrats and Catholic youth leagues. The Dutch Communists began actively resisting after the Germans invaded the USSR.

Members of the Dutch royal armed forces who had not escaped to Britain and had successfully evaded German capture secretly banded

Maj. Stewart Bentley is a 1996 graduate of the Joint Military Intelligence College. He was an intelligence officer in the US Army.
Dutch Resistance

By operating covertly and passively, members of the Resistance were able to function without attracting undue attention.

The British Military Intelligence Section 9 (MI-9) was set up to exploit available European Resistance networks and assist Allied airmen shot down over Europe in returning to Britain. MI-9, also known as IS-9, infiltrated agents, usually by parachute, into occupied Europe. These agents would link up with a Resistance cell and organize escape-and-evasion efforts in a particular area, usually after being notified by the Resistance of the presence of downed airmen. The agents brought money, maps, and false papers to assist these airmen. The usual route was either south to Switzerland or to southern France and then to Spain and Portugal.

One such MI-9 agent was Dick Kracht, who parachuted into Holland in 1943. He lost his equipment, including his radio, but continued on, armed only with a Colt.45. He managed to link up with a Dutch Jew named Joop Piller, living in the town of Emst, and they built a network designed to hide, protect, and eventually smuggle downed airmen out of Holland.

The Underground Press

Underground newspapers were helpful, especially in areas where the telephone lines were monitored and use of radiotransmitters was too dangerous because of German direction-finding operations. These newspapers helped counterbalance Nazi propaganda and the German-controlled media. Almost as soon as the occupation began, anti-Nazi leaflets began to circulate. By 1943, underground newspapers had attained a collective circulation of nearly 500,000. Although some were amateurish, they were effective. One such paper—a translation and transcription of daily BBC broadcasts—was produced by the Leegmsa brothers working at The Hague.

Another newspaper was also a two-man effort. Working out of a hotel room in Grave, Gerald Peijnenburg and a Dutch Jew in hiding wrote and copied Young Netherlands.
Peijnenburg handled the distribution, and most of his copies were passed from person to person, providing some degree of security.

**Slow Growth**

The Resistance developed slowly for several reasons. Because of the Netherlands' geographic proximity and cultural ties to Germany, many Dutch were sympathetic to the ideas of German nationalism, and a significant portion of the population joined the Dutch Nazi Party and even the Wehrmacht. There were also Dutch civilians who informed on their neighbors.

The swift German victory, combined with Queen Wilhelmina's seeming abandonment of the Dutch population, disillusioned and embittered much of Holland. Many who collaborated really believed that the Germans represented the future and felt that Nazi success was inevitable. For these citizens, occupation was something merely to be accepted. Ruthless German countermeasures toward any anti-Nazi activity further discouraged active resistance. As the occupation grew more repressive, a backlash against the Germans grew, fanned by the government-in-exile.

The government-in-exile made its presence known through the judicious use of BBC broadcasts, listened to covertly by the Dutch population. Queen Wilhelmina became a symbol of hope to occupied Holland, and Crown Prince Bernhard took an active role in Allied planning for military operations in the Netherlands.

Geography also slowed the growth of the Resistance. The lack of mountainous and forested terrain prevented the establishment of hiding areas for large groups of maquis. Moreover, the flat terrain, interdicted by many bodies of water, large and small, confined movement to the established railroads, road networks, and bridges. These were easily controlled by the Germans, who established checkpoints to curtail freedom of movement. Gasoline was scarce, and many Dutch used bicycles for transportation, sometimes riding on the rims because of a shortage of rubber for tires. On the other hand, the Germans were plagued by the Resistance's incessant sabotage of telephone lines and by damage to the railroads.

**Major Resistance Organizations**

By the middle of 1944, there were four major Resistance organizations in Holland. They did not coordinate their activities unless help from one group to another was absolutely necessary; for the most part they did not answer to a central headquarters. They conducted their operations as they saw fit, and members of the groups often did not know which organization they were part of. Many did not learn the identity of their particular group until after the war.

"Central Government Organizations For Help To People In Hiding" (LO) was the most important such group. Its primary goal was the protection and exfiltration of onkerduikers. Another activity centered around the coupons used by the Germans and the Dutch Nazi government to ration food and keep tabs on the population. The LO made counterfeit coupons; it also obtained authentic coupons from loyal Netherlands citizens in the employ of the Dutch Nazis. Other groups conducted raids and robberies to steal authentic coupons from government agencies. And some Dutch civilians gave up their own coupons to the LO.

Besides keeping an eye on Dutch collaborators, local LO groups engaged in whatever resistance they could without endangering themselves. Occasionally, the Leegma family in The Hague was able to use its position in the police force to tip off the LO before the impending arrest of an onkerduiker would occur. The family also was able to funnel genuine food coupons to the LO.

While the LO maintained a low profile, the "Central Government Fighting Group" (KP) carried out sabotage operations at the local level. Its estimated strength was 550 members nationally, but this figure is probably low. Without central direction, the KP attacked targets of opportunity in and around the hometowns. It tended mostly to target railroad tracks, telegraph and telephone lines, German supply points, and motor pools, but it occasionally assassinated individual German soldiers and Dutch collaborators. Such activities were dangerous. The Germans would crack down on the local population in the locale where a killing had occurred; sometimes they carried out a tit-for-tat retribution. The Germans would also step up their counterintelligence efforts in the area in an attempt to eradicate any underground cells.

A third organization, the "Council of Resistance" (RVV), engaged in both
communications sabotage and protection of onkerduikers. Allied planners regarded this group as "sound from the security point of view." With several thousand members, the RVV was in radio contact with the Bureau Inlichtingen (BI), the government-in-exile's intelligence service, and demanded arms and ammunition.

Another organization, the "Order of Service" (OD), focused on preparing for the return of a Dutch Government following Holland's liberation. The OD was made up primarily of former Dutch officers and government officials who found themselves supplanted by the Nazis and by Dutch collaborators. Its main missions were to collect intelligence and develop "plans for the maintenance of administrative services and civil order on the liberation of Holland." Although the OD was thought to have been penetrated, Allied intelligence estimated that most OD cells were still loyal and could be depended on to provide assistance during the liberation of Holland.

A subgroup, the "Dutch Secret Service" (GDN), functioned as an intelligence agency for the OD. There were also some 20 other intelligence entities in wartime Holland. Most Resistance groups conducted some level of intelligence operations, even if it was only counterintelligence for security purposes. When organized at the national level, the groups were divided into regional geographic areas of administration.

At the national level, the National Steunfonds (NSV) was an umbrella financial organization which received money from the government-in-exile and conducted covert fundraising to finance KP and LO operations. There was some overlap in responsibilities among members of the local and regional groups. For example, in the Nijmegen district, the LO commander was also the chief of staff of the district OD.

Almost every town of any size had one or more of these groups. It was also possible for one person to belong to more than one such organization. In some groups, members simply were referred to by nicknames, and their true identities remain unknown. Many of the groups were named after their leader.

### The Eindhoven and Nijmegen Undergrounds

Some organizations, established locally by individual Dutchmen, operated with no formal, structured links to any other groups. In Eindhoven, a group known as the "Partisan Action Nederlands" (PAN) functioned along the lines of the KP but did not consider itself part of that organization.

PAN was founded by Hoynck van Papendrecht. He studied engineering at the Technical University in Delft until April 1943, when the Germans closed the Dutch universities and began forcibly relocating Dutch students to Germany as a manpower and professional talent pool. Van Papendrecht went into hiding and eventually moved to Eindhoven, where he established the PAN. By June 1944, the PAN had reached its full strength of 80 to 100 young men and women. The PAN had several small cells operating in the small towns around Eindhoven. These included the Group Sander, named after its leader, which worked as a KP and LO subgroup. Margarethe Kelder and her sister were members of the Group Sander. They smuggled downed Allied airmen and Dutch onkerduikers to a crossing site on the Belgium border, coordinating their activities with a Belgian Resistance group. The female members of the PAN were primarily couriers, but they were also valued intelligence collectors. In early September 1944, Kelder and another female Resistance member were asked to go into the woods near Eindhoven to confirm the presence of a German antiaircraft battery. On the pretext of gathering mushrooms, they conducted their reconnaissance and, when confronted by German guards near the battery, were able to convince them of their innocence.

Another PAN group in a town north of Eindhoven conducted sabotage operations. It put salt in gas and oil tanks of German vehicles and blew up railroad tracks, using smuggled explosives provided by mining engineers.

After D-Day, many in the Dutch underground grew impatient and wanted to conduct more aggressive operations against the Germans. The PAN did so by launching raids against, among other targets, the 20- to 30-man German garrison at the Eindhoven airport on 5 September 1944. It also began conducting a form of psychological warfare; PAN members would approach German soldiers they knew and try to persuade them of the hopelessness of Germany's situation and to surrender. Some PAN members were reported by German soldiers and arrested. The punishment for belonging to a Resistance organization was summary execution.
In June 1944, the PAN set up its headquarters in a house in Eindhoven. Van Papendrecht had little contact with the other groups in the Eindhoven area, including the RVV, which numbered only three of four members, but he was aware of their existence. The PAN leader did conduct some joint activities with other groups when he felt the operational need for outside assistance. One of his outside contacts was the KP leader in Rotterdam, Jan van Bijnen, whose nom de guerre was "Frank." "Frank" was Van Papendrecht’s periodic source of weapons and explosives, couriered by such women as Margere the Kelder and her sister.

To the east of Eindhoven, in the small town of Helmond, a KP Resistance group was led by Johan Raaymaerkers, a former Dutch artillery captain who was a technical engineer and owned his own factory. Hans Bertels, a member of the group, began distributing an underground newspaper in 1941 in the Helmond area. Bertels’ contact was a man named Knaapen, who provided him with the newspapers and occasional operations orders.

South of Eindhoven, in the town of Roermond, a small LO group consisting of only 15 members had its headquarters in a vault in the local cemetery. Anya van Lyssens, later awarded the Military Order of William for her actions in the Resistance, was a member. The group had a radio, with which it maintained contact with a Belgian Resistance group, and smuggled downed Allied airmen over the border. By September 1944, it was credited with saving the lives of 29 airmen.

The Resistance groups in the Eindhoven area had a total of several hundred members. The local GDN was led by Arie Tromp, a director for the Phillips electrical firm office in Eindhoven. His nom de guerre was "Harry." By placing their headquarters in the Eindhoven Museum, GDN members were able to come and go without arousing German suspicions. The GDN began receiving taskings and orders from the BI following its establishment in November 1942. Tromp and his agents used the underground electrical cables in the Phillips factory, which also had telephone lines, as their primary means of communication.15

There were several underground groups in the Nijmegen area. In the city itself, some Resistance activities apparently were centered around Saint Canisius College. Jules Jansen was an engineering professor at the college and one of the leaders of the local KP. He set up a laboratory in his house for manufacturing explosives and an indoor firing range in his basement to teach KP members the basics of marksmanship.

OSS Involvement

The Resistance organizations were part of the largely unknown story of the strategic OSS mission into occupied Holland. This story essentially began in May 1944, when Lt. Jan Laverge constituted the one-man Netherlands Section of Special Intelligence (SI) of the OSS in London. The American-born son of Dutch émigrés, he had been personally recruited for the job by Col. William Donovan. As planning progressed for the invasion of Europe, Lt. Col. De Vries, the chief of SI, asked Laverge to develop a plan for using an OSS team to assist in the liberation of the Netherlands. On 25 May 1944, Laverge submitted his preliminary plan, which called for two officers and three enlisted men with associated vehicles and communications equipment.

Following the Allied invasion of occupied France, Laverge looked forward to having a chance to operate an OSS mission in Holland similar to the OSS mission, codenamed Sussex, which had operated in France. In July 1944, the Netherlands Section came under the control of SI’s Continental Division. De Vries ordered resubmission of plans for the liberation of occupied countries, and Laverge reviewed the initial work. The OSS team designated for Holland would come under the control of the Supreme Headquarters Allied Expeditionary Force (SHAEF) military mission to the Netherlands. The OSS team grew to six officers and eight to 10 enlisted men.

Later that month, Laverge consulted with the BI and used its contributions for the final plan, submitted on 5 August 1944. Both the BI and the OSS approved the mission, which was given the codename Melanie. The Minister of War in the Dutch exile government also approved the mission, which was to gather intelligence and focus on “transmitting information obtained from the Dutch service’s intelligence nets, trying to recruit...
agents, and extending Dutch nets into Germany.”

After Lt. Laverge got the green light for the mission, he began recruiting soldiers for the team, choosing men he had worked with before in England. He also began building up his team to ensure maximum self-sufficiency. In addition to his radio operators and two Dutch BI analysts, he recruited an American Army mechanic, a radio repairman, and a Dutch-American major with no previous intelligence experience. The presence of a Major on the team would provide Laverge with enough rank to obtain resources.

Melanie Moves Ahead

As operations on the Continent speeded up, so did Laverge’s preparations. The target date for the start of the mission kept getting moved forward, and Laverge began to worry that he would not have enough time to prepare properly. The decision was finally made to deploy an advance team of two Dutch and two American officers not later than 7 September 1944, with the remainder of the team to follow as quickly as possible.

When the advance team arrived in Normandy, it reported to the SHAEF G2 Forward. On 9 September 1944, Lt. Laverge met with a Major Krick of the SHAEF G2. Krick apparently offered little or no guidance to Laverge as to Melanie’s intended intelligence-gathering priorities and requirements. According to Laverge’s report to his OSS superior, Krick only made suggestions, which Laverge developed into the following requirements:

- German unit composition and positions behind the Siegfried Line.
- Location of enemy headquarters of any kind and names of Germans located there.
- Locations of the planning and archival sections of German industrial interests.
- Information on “controlling personalities” at all levels of the Reich.
- Locations of command, control, and communications nodes.

The OSS team was attached and ordered to report to Field Marshal Bernard Law Montgomery’s 21st Army Group. In early September, Laverge moved his team to the Palace Hotel in Brussels, in preparation for deployment into Holland. He also reported in at Montgomery’s headquarters.

Operation Market-Garden

In early September 1944, Montgomery, seeking to maintain the momentum of the Allied breakout from Normandy, conceived an operation to outflank the German “West Wall” defensive line. Encouraged by Ultra SIGINT intercepts which portrayed a disintegrating German Army, Montgomery persuaded Supreme Allied Commander General Eisenhower that his bold plan of forcing a narrow corridor through Holland and establishing a bridgehead across the Rhine River into northern Germany’s Ruhr Valley industrial complex held the promise of bringing about a German collapse by the end of 1944.

Montgomery’s Operation Market-Garden had two parts. He proposed dropping the First Allied Airborne Army to seize seven canal and river bridges in Holland as well as the bridge across the lower Rhine at the Dutch town of Arnhem—the “Market” portion of Montgomery’s operation. Simultaneously, the British XXX Armored Corps would rapidly advance 60 miles along a narrow road corridor crossing the captured bridges to link up with the airborne forces in Arnhem—the “Garden” portion. The operation began on 17 September.

The Melanie mission, with no prior coordination with the British XXX Armored Corps, deployed into Holland over the Albert Canal and reached Eindhoven on 21 September 1944. The team established its base of operations in a house at No. 2 Vestedijk Street.

The Dutch telephone network was a vital communications link between
Melanie and the Resistance cells scattered throughout the country. Using a TR-4 wireless telegraph radio set, the team’s radio operators established contact with the OSS SI section in Paris. In addition to the TR-4, the team used a TR-1 for local communications with the Dutch Resistance groups in the Market-Garden area of operations.

Even though the team was attached to the 21st Army Group, it apparently did not provide intelligence to Montgomery’s G2. Instead, its reporting channel was directly to Paris and the OSS Continental Division of SI. The exclusion of the 21st Army Group G2 from the intelligence reporting chain probably stemmed from the sensitive, compartmented nature of all OSS missions. The team had no contact with the 101st Airborne Division, whose Market-Garden objective was the seizure of Eindhoven and vital bridges nearby. The only American paratrooper the OSS team saw was a lone GI who wandered past the house one day and asked for a cigarette.

Laverge quickly made contact with Arie Tromp, the chief of the Eindhoven Resistance. With Tromp’s assistance, Laverge recruited four Dutch civilians to work as interpreters and telephone operators. A Resistance member named A. Jongbloed was employed as the mission’s intelligence and liaison officer with Dutch civilian authorities in Eindhoven. The OSS team used the Dutch telephone system to make contact with various Resistance groups throughout Holland. This reporting network began yielding excellent information almost immediately.
The team's first message to SI in Paris, on 21 September 1944, reported that it had begun recruiting possible agents for work behind the German lines. As the Market-Garden battle raged up and down the corridor along "Hell's Highway," the OSS team continued its intelligence-gathering mission. On 22 September 1944, the team reported the location of the Gestapo headquarters in Kleve, Germany, a border town just east of Nijmegen, and the location of the telephone exchange there. This information was passed via the telephone network by Resistance members. A report dated 24 September 1944 from a "reliable source" stated that, as of 22 September, all "troops [are] leaving Rotterdam, except demolition squads." The team also reported on other concentrations of enemy troops and artillery.

In addition to the Melanie operation, which was to provide strategic intelligence on the situation throughout Holland, OSS/SoE Jedburgh teams deployed with each Allied airborne division during Market-Garden. The Jedburgh teams worked closely with their respective division commanders and staff. These teams performed civil affairs and unconventional warfare missions in much the same manner as latter-day special forces units do, but they were primarily concerned with obtaining tactical intelligence provided by Resistance members.

During Market-Garden, intelligence supplied by the various Resistance networks, because of its noncompartmented nature, was passed through the Jedburgh teams to the various tactical commanders. The commanders received intelligence on the composition and disposition of German forces, as well as information on terrain and the conditions of the bridges. Once the paratroopers were on the ground, this information flow continued. Some of the Resistance cells were aware to some extent of Market-Garden before its implementation, but the decentralized nature of the underground network guaranteed that not everyone would know the time and place of the attack. As Allied parachutes began blossoming, those previously unaware of the
operation reacted by mobilizing their cells and recovering arms caches.

Some Resistance members carried out independent actions during the operation. Others actively sought out airborne soldiers and attached themselves to any unit that would take them. In cases where their loyalties were suspect, Resistance members were vetted by the Jedburgh teams. Once this was done, they were farmed out to different units as the need arose.

Jedburgh Team Claude, attached to the British 1st Airborne Division, was too small to conduct effective operations. One four-man team per brigade would have been enough, but not one team for the entire division. The splitting of this team had disastrous consequences, placing the entire responsibility for the vetting and administration of the available Resistance on the junior member of Team Claude, Lt. Knottenbelt.

The British plan for using the Resistance fell apart after Col. Barlow, the officer in charge of civil affairs and of working with the Resistance in the Arnhem area, was killed. Dutch naval commander Wolters was attached to the British division, but his stated mission was focused on Dutch civil affairs after the liberation of Arnhem. His unplanned, ad hoc actions during the fighting demonstrated his considerable abilities; if his responsibilities had been broadened before D-Day, he could have been even more effective.

The communications failures suffered by Market forces, especially the 1st Airborne Division, are legendary. Team Claude’s loss of communications occurred because the team carried only one radio for the operation, which was
lost during the initial drop on D-Day. Team Edward’s inability to communicate with Team Claude and the physical isolation of the two teams prevented a clear assessment of the situation at Arnhem.

**Intelligence Failure**

Market-Garden ranks among the most serious intelligence failures of the war. Critiques of the operation have focused on the overly optimistic interpretations of SIGINT as well as on the failure of planners to credit airborne reconnaissance indications of recent German armored reinforcements in the Arnhem area.

Similarly, the operational planners, in their haste to meet Montgomery’s deadlines, paid too little attention to route, terrain, and weather assessments. These assessments, moreover, suffered from insufficient basic intelligence information. Selections of drop zones, especially at Arnhem, were ill-considered, and estimates of the road system’s ability to support the armored column were critically flawed, although this latter shortcoming was as much a planning failure as it was an intelligence failure.

The Dutch Resistance was not alerted to the Arnhem drop because British intelligence believed the Germans had penetrated their Dutch networks. If the British had heeded word from their agents in Arnhem, they would have been alerted to the presence of two enemy panzer divisions.
**A Bridge Too Far**

Operation Market-Garden turned into a military disaster. Although the American airborne divisions eventually achieved their objectives—the 82nd Airborne parachuted into Grave and Groesbeek and controlled the strategic river crossings, while the 101st Airborne seized the bridges at Eindhoven and Veghel—the Germans managed to demolish one of the bridges. In addition, the British 1st Airborne Division, reinforced by a Polish airborne unit, was dropped too far from its target, the Arnhem bridge.

More fundamentally, German strength in Arnhem was substantially greater than anticipated in the intelligence estimates. Lightly armed Allied paratroopers found themselves up against two SS panzer divisions that had recently been refitting in the area. The British/Polish force, suffering from the loss in the airdrop of critical vehicles, artillery, and communications, failed to seize the Arnhem bridge despite a heroic fight.

The situation in Arnhem grew increasingly perilous. The British armored column which was to break through to relieve the airborne forces fell behind schedule as the tanks crawled along the narrow, congested roadway. The operation ended less than 10 days later, with the British and Polish airborne troops surrounded in Arnhem and the armored column stalled 10 miles away.

The British were able to pull back some of their forces, but not before the Germans killed or captured more than 7,000 paratroopers; the two American airborne divisions fighting along the corridor lost more than 3,500. With the debacle in Arnhem, hopes of an early end to the war quickly faded. In the words of the British airborne Commander General Boy Browning, Market-Garden was "a bridge too far."

**Carrying On**

After Market-Garden, the Melanie mission continued to collect military, economic, and industrial intelligence. A detailed report dated 14 December 1944 provided the specifications on a Mauser small-arms factory in the town of Oberndorf, Germany. The team also provided reports regarding German atrocities committed against Allied prisoners and Netherlands civilians.

The unleashing of German secret weapons such as jet aircraft and the V-2 rocket made information about these weapons critical. Melanie responded by providing information on the location of V-2 launching sites, with detailed sketches. Information on industrial infrastructure was also provided. A report dated 3 March 1945 stated that V-2 parts were being manufactured in the Croecke textile factory in Hohenlimburg, Germany.

In late December, coinciding with the German attack through the Ardennes, Melanie developed intelligence indicating a secondary, supplementary German attack across the Maas River. Maj. Van der Gracht reported to his superior, Philip Horton, that in the period of a few days more than 30 German commandos wearing British uniforms had been captured in Eindhoven, some only a few blocks from the team's quarters. Van der Gracht also reported, however, that Eindhoven had received numerous V-2 attacks "with some accuracy." The threat became so ominous that Van der Gracht made plans for the destruction of those files which could not be evacuated.
On 8 February 1945, Melanie reported that Field Marshal Goering had established his headquarters in a train with three coaches at the Niederaul train station and that he had been there for several months. Dutch intelligence agents were routinely able to report the locations of German regimental and higher headquarters along with descriptions of vehicle and uniform markings. Reports on German units were usually able to identify the name of the commander and sometimes what decorations he wore. This type of information came from underground sources living in the occupied towns and villages.

SI also tasked Melanie to conduct and submit battle damage assessment reports on the results of Allied bombing raids in the Netherlands. Again, such reports could only be obtained through eyewitness accounts provided by Dutch Resistance members and Melanie agents.

A 24 December 1944 memorandum from Lt. Laverge states that the team had recruited nine Dutch citizens—five observers and four wireless telegraph operators—and was training them in Eindhoven to penetrate German lines and collect information. Armed with only their wits and the TR-1 radio, these Netherlanders tried, with varying degrees of success, to accomplish their assigned missions. From September 1944 until May 1945, several secondary missions were conducted, each including at least one agent. These missions involved contacting various Resistance groups and establishing radio contact between the groups and Melanie for intelligence-gathering purposes. Some of the agents did not survive.

Armed with only their wits and the TR-1 radio, these Netherlanders tried, with varying degrees of success, to accomplish their assigned missions. From September 1944 until May 1945, several secondary missions were conducted, each including at least one agent. These missions involved contacting various Resistance groups and establishing radio contact between the groups and Melanie for intelligence-gathering purposes. Some of the agents did not survive.

From 25 to 31 March 1945, the Melanie mission sent 251 reports, messages, and maps/sketches to the OSS/ETO SI section. From September 1944 to April 1945, Melanie sent approximately 3,200 courier reports and 750 cable messages to the OSS SI section in Paris. According to an after-action report written by the SHAEF G-2 in 1945 evaluating Dutch intelligence production and reporting, the Melanie mission "supplied more reports for SHAEF's Daily Digest than any other OSS mission from September 1944 to May 1945."23

Undeserved Obscurity

Despite its achievements, Melanie has hardly been mentioned in most OSS histories. The only sources on Melanie are surviving participants and the declassified OSS records at the National Archives at College Park, Maryland. These records include daily situation reports, financial accounting records, operational reports, and debriefs of Dutch agents sent behind the lines. There are important gaps in the records; some documents have been pulled from the files and reclassified.

But the SHAEF G2, at least, gave some credit where it was justly due, when he reported that Melanie provided the most accurate and complete intelligence picture for its assigned area of any intelligence operation during the war.24 As he indicated, Melanie's efforts and the cooperation and sacrifices of its Dutch Resistance agents contributed substantially to Allied intelligence operations in Holland at a crucial stage.

NOTES

5. The BBC also broadcast messages and codewords targeted at various underground groups. Some messages were orders to conduct certain operations. Others notified particular groups that arms and supply airdrops would occur at a predetermined location.

6. Author’s interview of Gerard H. J. M. Peijnenburg, Dutch Secretary of the Army and Resistance member; Wassenaar, Holland, 18 June 1996.

7. Ultimately, the BI was responsible for establishing a network of intelligence agents inside occupied Holland. The BI also maintained communications with the Dutch Resistance, providing the Allies with valuable HUMINT.

9. Author’s interview of Gerard H. J. M. Peijnenburg, Dutch Secretary of the Army and LO member; Wassenaar, Holland, 18 June 1996.

10. Author’s interview of Leo Heinsman, LO member; Beek-Ubbergen, Holland, 18 June 1996.

12. Author’s interview of Hoynck van Papendrecht; Eindhoven, Holland, 14 June 1996.

14. Van Papendrecht was against the random killing of lone German soldiers. He seems to have regarded this as ungentlemanly and serving no purpose.

15. Author’s interview of Jan Laverge, Captain, USA (Retired); OSS veteran; Richmond, VA., 2 November 1995.

17. NJARA RG 226, Entry # 148, Box 26, Folder 378, Melanie Weekly Report.

18. XXX Corps’ advance (the Garden portion of the operation) to link up with the three airborne divisions at Eindhoven, Nijmegen, and Arnhem was restricted to a narrow two-lane highway and the areas the paratroop units had secured. This road won the nickname “Hell’s Highway” for the ferocious fighting there between the Wehrmacht and Allied units.

20. OSS/SOE Jedburgh teams were joint Allied special operations teams that infiltrated into occupied territory to recruit and train local Resistance organizations for strategic intelligence operations and sabotage.
