Homage to CIA Drug Fight Ironic

By JUDITH RANAL

The American Medical Association, which predictably offers few surprises at its annual meeting, achieved the unexpected this year.

As one entered the convention's exhibition hall in San Francisco's Civic Center, one's nostrils were assailed by an odor more appropriate to the city's Haight-Ashbury district — an aroma strongly suggestive of the burning leaves and blossoms of the female Cannabis sativa plant.

The scent fired the curiosity of all in the hall who had ever sampled marijuana and drew from the wife of one physician attending the meeting the remark that she had smelled that odor many times in the back of the school bus she drives.

That was only the beginning of the surprise. Following one's nose, one soon came upon a booth housing an exhibit on drug abuse which featured a display about many drugs, including pot, and a device that generated a synthetic smoke that was close to, if not identical with the real thing.

Grant ed, the crusade against drug abuse needs all the help it can get. But the trouble with the CIA exhibit is that it does not tell things strictly as they are. For example, it implies that the use of marijuana sets the stage for later use of heroin. This issue is by no means settled, and as a matter of fact, there is a good deal of evidence to suggest that alcohol, rather than marijuana, is the first drug to be abused by most people who subsequently become heroin addicts.

In any case, many experts believe that there is any connection whatever between pot and heroin, it is their illegal status and that if the former were "decriminalized," the link with the latter would tend to disappear.

More important to this discussion than an argument about the casual relationship of the two drugs is the point that the CIA does not come into the campaign with completely clean hands. Reporters have been hearing for more than a year that the agency has been supporting the heroin traffic in the Golden Triangle region of Laos, Thailand and Burma, and that this opium byproduct has been one of the more important cargoes carried by Air America, an airline operating in Southeast Asia whose charter business is almost exclusively with the CIA. The Golden Triangle region, incidentally, is said to grow 70 percent of the world's illicit opium from which morphine base, morphine and eventually heroin are derived.

For more details on the CIA's complicity in the heroin mess, one might consult an article entitled "Flowers of Evil" by historian Alfred W. McCoy, in the July issue of Harper's magazine. Part of a forthcoming book called "The Politics of Heroin in Southeast Asia," the article spells out in detail how Vag Pao, long the leader of a CIA secret army in Laos, has become even more deeply involved in the drug traffic and what role this traffic has played in the importation of heroin into the United States and its use by our troops in South Vietnam.

WASHINGTON CLOSE-UP
