16 July 1962

MEMORANDUM FOR: Chief, Data Management Division

SUBJECT: Binary Code Reader

25X1A

25X1A

1. Two engineers from [REDACTED], will be at NPIC Wednesday morning between 0900 and 1000 for the purpose of examining the binary code reader which was built by your people. I have the fourth floor conference room reserved for this period should you desire to move the instrument there. Neither of these men is cleared to see our material so I would suggest using some of the simulated binary codes that you have had prepared.

25X1A

2. In order not to jeopardize the possible patentability of the equipment, [REDACTED] has suggested, after checking, that a statement be prepared for their signature after examining the equipment. The statement should note that they have examined the device, witnessed a demonstration of its performance and understand the working principles involved. According to Carl such a signed statement should protect the Government and the men involved.
