SUMMARY: SITE IS A NATURAL PLACE. IT IS
 NARROW, ^{LONG,} DEEP, AND BRANCHING. THERE ARE
 CURVED + ODD SHAPES. MOSTLY DARK ROCK.
 FROM ABOVE, IS DEEP; FROM BELOW, SIDES ARE
 HIGH, SLOPING, NORM VERTICAL. OPEN FEELING
 LENGTHWISE, BUT VERY CLOSED-IN FEELING SIDE-TO-
 SIDE. COOL FEELING, DRY, QUIET (WIND SOUND +
 FEELING). ^{PASSAGE} HAS MULTIPLE LEVELS.

Wind Cave National Park

This park is located in the Black Hills of southwest South Dakota about 10 miles north of Hot Springs. The park is named for the wind that blows in or out of the mouth of Wind cave, which is the main attraction. Established in 1903, the park has an area of about 28,000 acres, mainly rolling, light-colored prairies and wooded hills used as a game preserve.

Wind cave, perhaps once the sacred Cave of the Winds of the Sioux Indians, was officially discovered by cowboy Tom Bingham in 1881. It was formed by the action of groundwater dissolving limestone. About 7 miles of the cave are known, including chambers 30 to 100 ft high. The cave is famous for its intricate boxwork-delicate veins of calcite deposited in fractures of limestone-and for its frostwork-tiny white crystals that hang from the ceilings and on the walls. A trip in the cave covers about 1.25 miles and takes about an hour and ten minutes. The route is lighted electrically, and a tour guide is in charge of each trip. Tours are not available in the winter.

Other attractions within the park include prairie-dog towns and large herd of bison. Other animals include deer, elk, pronghorns, badgers, coyotes and raccoons.

Activities include camping, guided tours, hiking, nature walks, picnicking and scenic drives. The park is operated by the National Park Service.
