: Operational/CART  
: Penetration of HBCROPING Security Formations

REFERENCES: A. [ ] Case.  
B. EQGN-19858 dated 13 January 1958.  
C. EQGN-91879 dated 14 August 1957.  
D. EQGN-906 dated 28 March 1958.

ACTION REQUIRED: For your information, and see paragraphs 3 and 4.

1. There has been recently increased attention to the subject of penetration of HBCROPING Security Organs. maintained by a number of fortuitous circumstances. For example, [ ] as a result of liaison contact, virtually offered himself to us and appears to have no ulterior reason for doing so. The correspondence indicates that FOE is not proceeding slowly and methodically on this one. Given the encumbrance to both ODYKE and LIBARK inherent in the discovery of such a contact, this is obviously an easy suspicious method. Nevertheless, we wish to emphasize the importance of giving very thorough attention to the possibility that each "volunteer" may have been played in our direction by a hostile service in the hope that we would recruit him and thereby provide convenient AIS cover for what would be essentially a hostile penetration of HBCROPING elements. The possibility of such an approach is, of course, no idle theory since this technique has been successfully used in Germany by the Soviets in several important cases to date. (For example, the Schmidt-Schmeiser-Albert case; the HOFER case illustrates this principle also, but with a reverse twist.)

2. We are sure it is also your view that although penetration of HBCROPING security services is desirable, such efforts must be put in perspective with the BRD priorities and the depth of operational commitment of the base CE component concerned. A penetration of a Federal agency is clearly more desirable than of a Land agency, if only for efficiency's sake. On the other hand, although much lower in priority than the penetration of a Land agency may be justified if it is vital to the success of a particular base's mission. We are not so far convinced that the [ ] operation falls in either of these categories, although we have admittedly not yet seen the full scope of his capabilities. The CARELM contact, despite our excellent lead-in to it, and the reference B suggestion, strike us as peripheral to our interests. We are, in short, not interested in this type of penetration on the local level, where in most cases close working relationships would seem to produce the important information we require.

3. In connection with penetration at the Federal Level, there were and still are as far as we know, a number of identified opportunities in CAVATA previously reported from the field which could stand some closer scrutiny. It is our impression that since the device of OROPAL'S ill-fated CAMPUS operation, CODEX has no active program of this sort. However, the information on which such an effort is based is constantly available to, and to a degree being consciously gathered by, OROPAL liaison officers. Since this is information to which we should, under NSCID 5, have access, we ask you to consider discussing this with NYMANDOLA making certain information available to us for this purpose on request. You will have to determine the form in which this is done, since naturally we would want the specifics of our interest to remain as closely held as possible in each individual case.

4. In all cases where actual recruitment is contemplated, however, we deem it most mandatory that the principle of non-attributability to KURARI is maintained. Thus, in connection with opportunities to recruit CAVATA personnel outright, the recruiter should be someone not previously identified as a KURARIer. This in no way inhibits the discreet way paving or softening up process being performed by a liaison officer.
