CAMBIO Reports. 240.1

Show [] Mon []

REF: MOKE-30599

1. Referenced questions were asked CAMBIO by CAUTERY at a recent meeting. CAMBIO evaded answers on phototechniques, but came forward with attachment which is too fantastic to swallow. The CAUTERYs intend to pursue more detailed questioning on this score at a later date. Consequently, we are unable to answer reference now.

2. CAUTERY 1 had occasion to sound out CAUTERY 14 on this as well as other information which CAMBIO has collected on the Schneeburg area, and CAUTERY 14 indicated that the information is pure fraud. We are inclined to go along with CAUTERY 14.

3. Because CAMBIO has been caught in several lies, we are currently using him on assignments where he can generally be checked. In all likelihood, he will soon be dropped. In the meantime, we will check further on the "generator" though we believe it is pure hoax. CAMBIO states that he is no longer in contact with Kleinheupel and Schwurs, but that he will try to recontact them.

1-OCB w/1 attach.
1-SCB w/1 attach.

SECRET

SECRET

Attached sketch should illustrate the entrance to the generator Plant. The entrance is the shaft (Himmelsleiter) in Schneeberg-Neustadt. The top is about 70 meters above the base of the mine in the direction of used-up mine at the fork of the Wildbach-Oberschlema road. The entrance is in the region of the chemical preparation (washing) works of Objekt 2. Dynamiting work necessary for this Generator plant was begun in June by workers of Objekt 11, and completed in July by Red Army units. All other entrances were re-routed or sealed. The path taken by Kleinhempel, Schwarz, and myself is a tunnel 60% fire-gatted during the years 1800-1840. This tunnel ends in a depression behind the regular entrance shaft. By means of rocks one can reach the ground level of the mine. There is about a 40 meter tunnel to the generator plant. I myself found this closed. I took wax impressions of the lock and made reproductions thereof. I found no security measures or electric alarms despite careful search. I hereby state I saw this personally. Kleinhempel and Schwarz showed me the way and were present.
