REPORT ON OSS ACTIVITIES
FOR THE MONTH OF FERUARY, 1944

Nashington appointments, the four theaters of operation,
ETO, NATO, METO and PETO (SEAC, China, and Detachment
101) and reports on the following Branches: Communications,
Vield Photographic, Voreign Nationalities, R & A, Security
Office and Schools and Training. Other Branches are not
covered separately because it was believed their activities
would more properly be treated under the respective theaters
in which they operate.

terms of theaters subdivided by branches, and of certain washington activities. As the system improves, an attempt will be made to relate the activities of the branches in the respective theaters and of the branches here, to the number of personnel assigned and to the amount of money expended. Thus, in viewing what has been accomplished from month to month there will be some basis for gauging the effectiveness of the efforts being made.

SUMMATION OF PRODUCES AF ONE ACTIVITIES DURING FREEDARY, 1944

Some of the activities in the field have shown substantial

procures during February. Of these certain ones may be worthy

of special mention, as follows:

()

- of the Dustor are pointed toward D Day and relate to preparation rather than operation during the intervening period. All
 the major plans seem to be proceeding satisfactorily, with
 equipment and personnel needs substantially fulfilled and our
 two radio stations ready to operate. R S & is now active in
 numerous fields, so many in fast that there is a question shather
 it should not begin limiting itself to specific objectives. Air
 setivities show signs of improvement with 22 sireraft sirenty
 eveilable; and highly favorable comments have been required on
 the improvement in quality of SI intelligence. We and to a
 lesser extent MC are the only branches in the Suropean Pheater
 - 2. In the Borth African Theater the number of intelligence missions within Boyth Italy and France has been expanding.

 Matters of unusual interest include a highly organized pough service out of 'rance through Spain and the organization of a Spanish Desk to develop these operations. Air autivities during the month of February were completely frustrated by the lack of plane facilities to carry containers. A development of interest in this Theater is the agreement pursuant to which NO has become

- 2 -

 $(\bar{})$

Ũ

an autonomous unit within the FWB structure conducting black propagands satisfies, particularly in the forward greas. Forhaps the outstanding difficulty noted was the fact that because of the shortage of agent sets 60% of the drops of agents scheduled for march had to be cancelled. Sowever, this is being worked out successfully by Communications.

- 3. In the Middle Eastern Theater our mission with Mihailovitch has been withdrawn pursuant to agreement between the U. S. Jovernment and the British, but our operations with the Partisans are on an expanding scale. In Greece, one of our representatives in the military mission was instrumental in negotiating the truce between the principal resistance groups.
- the done on SEAC. In China there has been a clarification of the SACO-OSS relationship pursuant to which DSS and the Mavy will each have individual commends and each report to General is it direct. All but two of the seven camps in China started under the direction of Capt. Hiles will be henceforth strictly Eaval operations. Missions into indo-China seem to be held up by political considerations among the various French groups there. Detachment 101 is still the major bace of our operations in FETO and is discussed at considerable length in the attached report.

SUNCTRACE STRACTURE OF OPERAPTORS

PERSONAL A 1944

I. GENERAL

The personnel strength of CSS in ETO totaled 1,605 on 25 February, representing an increase of 304 since 30 January 1944.

DITELLIGENCE

II. <u>81</u>

A. Sesser Plan

The edaptation of the Sussex Plan presented 26 January and discussed in the January report was approved by the Commanding General of the Theater 10 Petronary.

The four members of the Sussex Pathfinder Hissien were disputched to France on the night of S Pobruary. Subsequently, on the Sind and Sith of Pobruary, two signals have been received from the Pathfinders in France. This advance contingent of the Sussex Hissien is operating in France at this time solely for the purpose of finding safe landing points for the Sussex agents who will go into France in advance of D-Day.

A meeting of the Sussex sub-Committee was held on 17

Pebruary to determine the last possible date on which information
must be received from the Pathfinder Mission in order to dispatch Sussex teams during March. All of the equipment for the
agents and most of their elothing have been gathered together.

TOP SECRET

10P SECRET

governty-nine Sussex agents are now in training at 25-7, and 96 are now in England (52 operators and 44 V/T operators.) The Sussex contingent is almost complete, with only 56 agents needed, most of them already recruited in Borth Africa. In late Pobrusry 17 men were dispatched from there for Sussex.

Detailed cover stories have been prepared for the first nine Sussex teams, four of which will be American teams. Briefing for the first group of Sussex agents communed in late Pebruary and will continue until all the men are dispatched. Information on towns where they will be landed has been gathered from the French, and a black list for each of the first teams has been obtained through X-8.

Regetiations continued in connection with the proposed use of "accomplen" and the handling of intelligence received by the use of such equipment. (Accomplent is a means of picking up extremely week radio signals from our agents or recistance groups through the use of steel tape receivers installed in our aircraft dispatched over enemy territory specifically for that purpose.)

B. Other Special Plans

l. Proust Plane-As a direct result of discussions with General Donevan during his visit in Lenden, a reserve pool of 5G French agents is being recruited for the use of field intelligence in France after D-Day. This project, under the direction of Col. Neave, will be referred to as "Proust." Ten of the fifteen men recruited

SECRET

during Pobreary are already in vigorous training.

2. Labor Section

i,

- (a) Mission Varling--One of the first two
 Mission Varlin agents who landed in France for the
 purpose of establishing labor contects with resistance
 groups died as a result of injuries after a safe
 landing had been reported. The mission is to continue,
 however, and a W/T operator is being trained to
 lighten the burden on the comrade of the man who was
 land.
- (b) "Penet B" Plane-Consideration is being given to integrating the "Panet B" plan for the penetration of Gormany with Mission Varlin. The "Panet B" agents may be dispatched from Switzerland, provided they can be dropped or landed in France, and make their way to Switzerland.
- 3. <u>Horwagian Group.</u>—The Horwagian group of nine students and five staff members were given a week's training in Pebruary — the first of a two-part training program.
- 4. Respecting the "Cotopus Project," training of men qualified to act as organizers on the continent under the direction of American staff officers has reached the stage of training at the Prochold training area. A group of six will receive general SI indestrination, with special emphasis on undercover techniques.

C. Strategie Intelligence

1. Pour agents sets and two Signal Corpe ecaverters were delivered to BRAL (the intelligence section of the SECh

Prench Committee of National Liberation) during the month. Also during Pebruary, a BRAL agent established sentant with OSS in Switzerland, and as a result a new chain of intelligence communications will be established from French resistance movements to London through OSS Switzerland.

2. Arrangements have been completed for SI participation in the British-American-Horwegian intelligence agreement under the terms of which SI will contribute instruction personnel and W/T sets in return for all telegraphic intelligence received (except purely Waval intelligence). W/T messages from Horway are new being received regularly through Broadway.

a detailed white list is being prepared. As the Luxumbourg military intelligence service is closely tied in with the Belgian and British services, information secured from Luxumbourg will be available to OSS when the request to receive military information from the Belgian service is settled. Plans for a Belgian project similar in its objectives to the Mission Varlin are under discussion and show promise of materializing.

D. Reports

()

l. Extremely favorable comments have been received from Admiral Limpenny, of the Seconomic Section of M16, on the improvement in the quality of SI intelligence over the last three months. A copy of his memorandum has

-4- SECKLI

been forwarded to Washington.

hemseforth be restricted to a maximum of eight to ten reports a week which are to be of the highest quality. The remaining reports will be turned over to the Research and Analysis Branch in London, which in turn, will make them evailable.

5. An SI laboratory has been established.

III. X-8

The training of counter-copiesage officers and enlisted men for the SCI teems has continued in Lenden. The required personnel is en hand and total 35, including 15 for the Army Group, 16 for the lat Army, and 10 for the find Army.

The deek personnel there are conscituted on the proparation of special counter-espionage handbooks which are to be used by the Allied Forces. As part of their training, some of the SCI teem members are assisting in the proparation of the handbooks. SHAEF (Supreme designanters, Allied Expeditionary Forces) has indicated that some additional SCI field teems may be required and the necessary plans are being made. Consideration is also being given to the responsibilities and work of the X-S Branch in enemy and enemy-escupied territories once those territories come under Allied control.

All necessary vehicles have been secured from ETO, and all other supplies are either on requisition from ETO or Washington.

.- TOP SECRET

There have been preliminary senversations with SHARP ecneerning the Central Counter-Intelligence Bureau which SHARF is proposing to create when Cormony is eccupied, for the purpose of coordinating counter-intelligence information and policy. Section V of MI-6 and the X-8 Branch of OSS are the two agencies recognized by SEARF for ecoperation in planning and executing this program.

IV. 104

Rai Branch was in the midst of a recrientation of functions during Pobreary and any description of its activities can be only tentative. Until recently the fact that active military activity in the European Theater was limited largely to the Air Porce tended to limit what to servicing Washington, ecoporating in research work of British agencies, and establishing liaisen with allied and U.S. agencies, inche intelligence field. During Pebruary the entire staff worked on requiremt items, such as answering requests from Washington, reports for other OSS branches, lectures to Civil Affairs and OSS personnel, and lisison work. Current intelligence reports were prepared for Ambassedor Winest and G-8 including the pelitical annex fer the weekly G-E intelligence Report. The Beonomic Warfare Division of the U.S. Embasey, of which the Intelligence Division is jointly staffed by PRA, State Department, and OSS continued to channel all american limisons with the British Ministry of Economic Warfare and to process economic intelligence for American Army clients. Reports have been completed concerning Russia, including Seviet requests for, and British shipment of,

TOP SECRET

'nen-ferrous metals, and an interim report on the Ministry of
Resnamic Warfers's estimate of Soviet oil refining separity
in 1940.

Flans were made for developing the general economic work for R&A so that other U.S. agencies in the field can have the benefit of our economists' knewledge. For many months R&A personnel have contributed to the Basic and Zonal Handbooks, which are published as a joint product of British Political Warfare Executive and CSS.

As of 29 Pebruary the extent of RhA's contribution to Civil Affairs had not been defined. RhA personnel took part in the Civil Affairs training program at Shrivenham, and it is hoped that RhA will have more than a reporting and evaluation function in connection with Civil Affairs, SHAEF (6-5).

Plans are being formulated for joint intelligence teams of

FWE and RAA personnel. RAA now hopes to provide a minimum of

two men or three each for France and Germany. Ultimate particle

pation will depend on the RAA personnel available when the

teams move into the field with the Army. They will form part

of teams to be on 24-hour duty once operations begin, and should

be capable of making appreciations of intelligence on the spet.

Finally, on RAA representative will be assigned to the Apprecia
tions Section of the Psychological Warfare Board at SHARF

headquarters.

Special work is being done for the American members of the European Advisory Commission, which includes Ambassador Winant and General Wickersham.

TOP "SECRET

Militimal personnel arrived in Lenden Saring the month,

including a company of geographers who are to set up a deegraphic Research Unit.

purely W.S. agencies and carrying on ecoperative projects with British agencies. With the arrival of more personnel, the current tanks will become casier to perform and new opportunities can be exploited, especially after the start of military operations, which bring with them the chance to undertake the type of field work new carried on in the mediterranean Theater.

v. 💇

VI. 30

As Jedburgh Plan

getire complement is practically filled. 41 N/T operators and 50 officers are being trained as Jedburgh landers, and are all located in the main school at Peterbers. During the past month their morals has improved considerably. Late in February the school was inspected by General Declittle, Allen and Novima.

One evernight exercise and a four-day field exercise were completed during February in the area known as Henley. One of the objects of the exercise was to test and put into practice communications in the field.

The Jedburgh W/T set is new working ext more satisfactorily and the W/T operators are ensouraged about its performance.

There is an adequate supply new on hand.

a memorandum outlining proposed activities of resistance groups in assisting an opposed invasion of the centiment was submitted to the G-3 section 1st U.S. Army. An "SOE/SO" plan was also propared and is expected to be inserperated in the lat Army plan.

B. Scendinavien Project

This project is primarily for the purpose of obtaining military information for special operations and providing aid to resistance groups in enemy eccupied areas in Scandinavia.

He further information is available.

VII. AIR ACTIVITIES

period, of which twenty were successfully completed. In contrast to this figure, only eighteen sortion were flown in the James period, eight of which were successful. The February sortion secounted for the delivery of 240 centainers to resistance groups in France.

Tunnty-Two of the thirty-two Liberators assigned are now based on the sirdrome at Alsonbury. At the end of Pebruary, the remaining ten were being modified and were to be delivered within a few days.

The Airdrome at Matten, Merfolk, to which USE squadrons were dispatched, was found to be unsuitable for operations until runway repairs and lighting installations have been made.

Operations will continue from the Airdrome at Alconbury until the repairs at Watten have been completed.

Two hundred thirteen enlisted men and four officers arrived at Holme on 12 February from the United States, to man the

... TOP ESECRET

air operations pasking station. It was found n turn down 83 who were found to be unsuitable, and replacements will be obtained in the Theater. Arrangements have already been made to recruit 58 additional enlisted men and 6 officers for this work in the Theater. Delays in construction postponed the completion date for the work at Area N, the packing station, from 27 February to 5 March.

Curing the menth there was an investigation of the pessible use of helicopters as a means of delivering and picking up agents behind enemy lines. After a discussion with Commander Peat, who is in charge of helicopters in the European Theater, it was construct that models now available are not suitable for current OSS needs.

To supply resistance groups, three million rounds of earbine ammunition have been premised by Procurement and Supply in Weshington. Fiftom thousand OSS Patiens and 6,850 carbines are being procured for delivery to resistance groups. Two thousand five hundred medical kits requisitioned in February must arrive in London by the first of April.

VIII. NO

General information with respect to MC organization and activities in this theater was not available during the month of February.

A mission known as the "Sioux Mission" was cleared with the Acting Chief of the Northern European Section of the State Department. The State Department informed Ambassador Johnson, in Stockholm that it had knowledge of the objectives of the

mission and had approved it subject to his concurrence. In this connection, it was decided that Mr. Lonegren should go to Stockholm to explain the mission in person to Mr. Johnson.

The introduction into Germany and other countries of a work on Hitler has been planned. A "scientific edition" is suggested, the origin being assigned to a neutral country; it is said to require a psychiatrist in order to give it an authoritative character.

IX. W

At the end of the month, the personnel situation of this Branch was sleven on hand, siz regruited, and twenty to be recruited.

Suppose Hendquarters, allied Expeditionery Forces formally approved the Maritime Unit's plan to obtain and use four SC*s and three Pirts, but the latest information is that the allocation of specific boats to MU has been disapproved. The procedure authorized is that MU shall file any clan necessitating the use of craft with SHARF which, upon approval, would request the Commander of the U.S. Navy in European waters to furnish the vessel.

The training group at Oxford is preparing to move to "The Cottage", a large barge with accommodations for twelve, on a river close by the sea, near Suffolk, where the group will have facilities for more advanced and realistic training. There the maritime organization has set up what is known as L-Units, consisting of individual teams to attack water-borne targets, including enemy ship and dock facilities, cables, etc.

- 11 - TOP SEUKEI

*

4.7

vis: "A" operations in MIO are divided into three categories:

vis: "A" operations - pick-up missions of classicatine maritime

ferrying; "B" operations - direct attacks by American Maval er

military under-water swimmers (under G-3 SHAEF); "C" operations
sabotage attacks accomplished under water, which are perfermed

by resistance groups or in classat cooperation with such groups

(under authority of SOE/SO).

mp" operations are contemplated for the "L" unit at the present time, with one in late April and four or five in Mage.

Request for authority from G-S ETOUSA to recruit an CSS Polish OG of five officers and twelve enlisted men was sent in this month.

A plan was prepared for the use of the Norwegian OG's in the event of German Porces! withdrawal from Borway.

At the present time the OG's are undergoing special training.
Their morels is high and improving.

XI. COMMUNICATIONS

This station, now complete, is communicating with the mobile units now on exercises in the field, and considering the lack of experience of the grows, the more has been satisfactory.

There is a plan to pick up the Horwegian schedules later on.

B. Station Vieter (for SI, including Sussex and X=2)
This station has not yet been completed. However, it could
put five transmitters on the air in a few hours, if necessary.

With the alletment of frequencies approvedly the W/T Board, the plan is to arrange a schedule with ifrica 101 to handle direction finding (DF) traffic.

C. Agents! Equipment

with respect to Sussex equipment, an adequate supply is reported to be on hand. With respect to Jemurgh, the British are to supply the sets and they also report an adequate supply.

A new type agent set is being received at the present time from the United States. These are found to be far superior to the old in many ways, both mechanically and electrically.

A conference was scheduled in mid-February with Lord Semiburst to collaborate with SIS in the assignment of agent frequencies.

XII. SERVICES AND SUPPLIES

A standard operating procedure for supply was submitted at the end of February. It sats forth the desired procedure to be used in the requisitioning, delivery, and storage of all supplies.

in Linden would receive adequate information as to the contents and ultimate destination of cargoes. This is regarded as of great help and will expedite the delivery of cargo to the user. It resolves a problem respecting which Services in London had previously complained.

XIII. OTHER BRANCHES

A. Field Photographie.

sork being done during February included: a) setting up a small camera for the agent training section; b) experimental work in connection with OSED; e) the coastal sommand project,

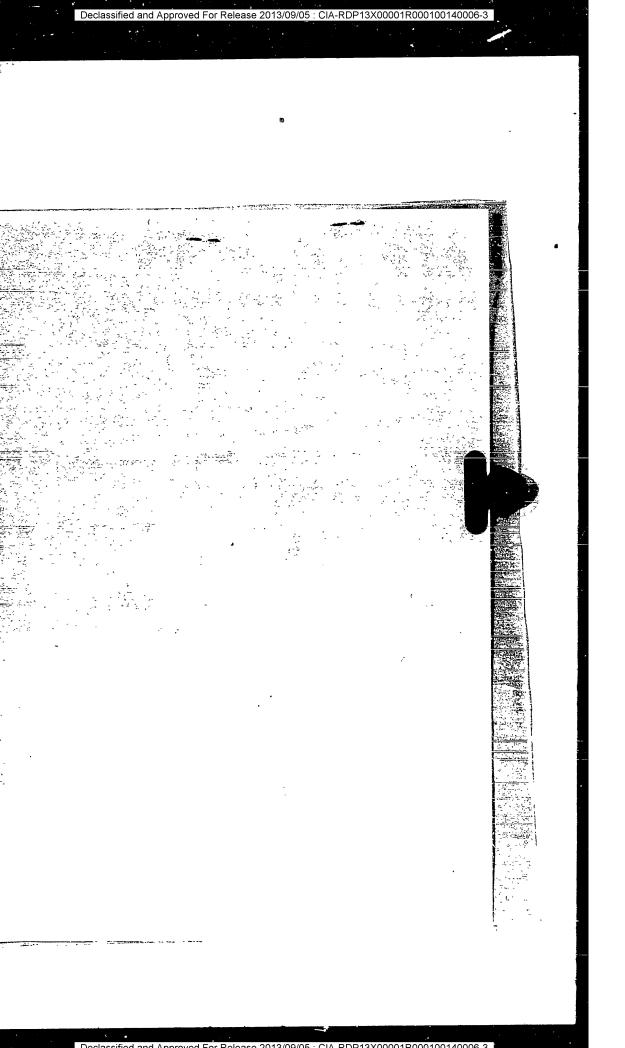

secret

new in its second phase, in which they are shooting at bases in the United Kingdom.

tentative story policy was set up which would: a) show German fortifications; b) photograph the training of Maval personnel in the various types of assault craft; e) cover the air softening up of the channel defenses; d) deal with the setual investor itself. The first two phases are almost entirely completed with material presently available.

TOP SE.

has done extensive work on the Balkans, having completed
145 mosaics covering airfields there and in Sungary, together
with a special airfield report on the Zagreb area, all for
the 15th Air Force, A-2. Intelligence was also developed
concerning 27 emergency landing grounds in Yugoslavia as
far as Budapest, together with photo-interpretation work
for Force 133, covering the Dalmatian coast. In addition,
the organization cooperated with the Acting Chief of Staff
of A-2 and A-3 on close ground intelligence covering the
Ansio beachhead.

Targets requested by Partisan Headquarters were submitted to the 15th Air Force. According to recent reports
the findings have been that the Partisans know more about
the condition of targets, frequently from experience, than
we can get from information that seeps out of the country.
It is believed, however, that we can assist by indicating
the intelligence targets we are anxious for them to destroy.

G. Labor Section. -- Arrangements have been made for contact with various Arab labor organizations in the Middle East through an Egyptian labor leader who is making an official trip through the area.

Training in small arms and close combat is being given the two men of the mission (PERICLES) which will go into Greece to work with LA', and they will soon be ready to leave.

One nemines was secured from the Greek Sequents Union,

The proposal to establish a separate underground organisation for intelligence in Grote was not favored by the British ISLD, since adequate intelligence is already being secured from there.

H. Reserve Section. Pererable comments have been heard with respect to DSS reports, the ISLS representative stating that the number in the "useful" category were definitely on the increase, and indicated that they considered our economic reports of great value, filling out an important gap in their own intelligence which is predominantly military.

Reports for recent months may be compared as follows: December 262, January 407, February 500. With respect to January, they covered the following subjects: Yugoslavia (57); Greece (55); Albemia (48); Bulgaria (45); Iraq (25). Utiline sources were: Istanbul (126); Hear Hast (90); Bari, Yugoslavia and Greece (over 50 each).

In addition, Bari reports, which are separate, are given as 21 for the last week in January, 74 for the week ending 5 February, and 64 for the week ending 12 February.

III. I-2

()

X-2 has been obtaining and cataloging material on personalities. An unusually complete file of German Intelligence Service records on German and Japanese agents were purchased from a German agent in Istanbul, and photographs of these

SECRET

recurits have produced a considerable number of names formerly unknown to this section and the British.

An agreement was reached between 20 and Z-2 regarding the type of publicity to be given the descrition to the Allies of the Axis agents in Istanbal.

EV. RAA

The projects under ver include Balkan and Hiddle Bast intelligence communies, air intelligence communies, current intelligence on Balkan reilreads, and a continuing study of Greek shippards and timber supplies. Material is also being analyzed for a report on ship-building and repair facilities in Greece.

In experimental Rungarian Intelligence Summary was drawn up and has been submitted to Washington for comments and suggestions; also a memorandum was propared concerning the Dalmatian coast, requested by military government authorities in Borth Africa. Seneral information was collected on Middle Hast affairs and Russian activities in the Middle Hast, and also on the military geography of Greece.

V. CD

OPERATIONS

VI. 20

The principal and perhaps only important activities of 50 relate to Yugoslavia and Greece.

.. TUr SECRET

TUP SECRET

A. <u>Yumaniania</u>.—According to a report from Lt. E. G. Wilson, the Partisens now have ten corps headquarters, and we shall have at least one officer with each of these. There are now nine American officers with Tito. Major Weil went into Tugoslavia as semior/liaison officer on February 27. At the present time we must rely on the British air force to arrenge for the transportation, but the British are coeperative and have suggested that more officers be brought in. All principal costs for this activity are being paid initially by the British.

 $(\bar{})$

Lt. Green, also in Yugoslavia, has reported that the Partisens are greetly encouraged by the recent sorties and are enthusiastic over Allied aid. One of our senior representatives in Yugoslavia (Parish) has trensmitted an offieial request from Tito's Ministry of Information that a party of two visit America to establish an emchange of information.

Captain Mansfield was evacuated from Mihailovitch territory and has reported on his observations in the field. Since the British have decided to withdraw their mission to Mihailovitch, the Director has ordered our sole remaining liaison officer to return with them. The matter of American intelligence officers in Mihailovitch territory is still being considered.

B. Greece. Lt. Wilson's report states that there are eight important corps areas in Greece, and an Allied military man with each. We have at least one officer available for each

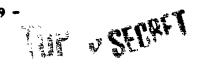

SECRET

of the missions. At the present time, guerrilla activities will activities was finally signed on February 29th. From information swall able, the possibility is that the Greek organisations will go home and not fight among themselves. Colemal Woodhouse, head of the Allied Military Mission to Greece, has sent several messages that without the help of Major Wines he could not have had the success he did with arranging the agreement that missions to be signatures of the three bands (MAM, MDES and MMMA), Colemal Woodhouse and Major Wines.

 $(\hat{\ })$

ef American officers operating in the Boros section, in an attempt to organise and mediate between guerrilla groups there. It also has as its second mission to destroy the bridges on the main railroad line leading north. In addition, one man has been working on the caique supply line to and from Greece; he reports that the route has now been laid out and part of it gone over. During February it was not in use pursuant to a ruling by the British Mavy.

to rescue the three remaining nurses who force-landed in Albania. When he has accomplished this mission, he has specific targets which he intends to ambutuse, and will try to find out what can be done to organize the guerrillas.

TOP SESECRET

VII. AIR ACTIVITIES

During the month, 17 planes (all British controlled) made 74 successful sorties out of 150 flights flows -- 100 tens of material and nine persons were dropped. Two hundred fifty sorties are planned for March, April, and May and a minimum of 10 Fortresses are needed.

10h genera

TOP SECRET

VIII. 10

According to Lt. E. G. Wilson's report, there are several phases to MO work which are being carried out in this Theater. One of these is "rumors," which are agreed upon at a weekly meeting attended by OSS and FWE. Of the number used, one-third to one-half are invented by our group. They have had some success in producing riots and the surrender of individual aviators.

There is also at the present time a black news service which is sent by radio from Cairo in Morse code. This is sade available to some thirty publishers of underground newspapers in Greece. It appears to come from within Greece and the source is not supposed to be American. Each broadcast contains from 600 to 800 words. Our SI and SO men in Greece are contacting publishers and advising them of this service. In addition, an agreement has been reached with FWE to work jointly on black pamphlets. The plan is to prepare and sauggle these into the Balkans to be distributed to the German and Quisling forces and certain groups in Amania, Hungary and Bulgaria. There will not be mass distribution. There is also a proposal to send an MO liaison to Tito's headquarters and to recruit a few officers to be sent to the PWE school.

Arrangements have also been completed here for the reprinting of four pages from Life Harasine to be on the sant to Cairo for use in the Theater to secure desertion of German soldiers by exploitation of the facts with reference

to good treatment received by German wer prise country, This material, plus colleteral data, will be sent, piecemeal, by air pouch.

Besides the activities specifically covered above, there are plans jointly with OWI to prepare special material to be dropped by Force 133 to the Mapslav Fartisans, including monthly news summaries. The Partisans are proving anxious to receive American material and therefore several hundred capies of "YARK" with a Serbe-Crost translation have been prepared to send in.

Also, recently, information has been obtained from Yugoslav refugees at the Sues Camp which will enable MO to intensify its work in the Dalmatian Islands. In addition to the work above, 058 and Bivision PWE have joined in steps taken to coordinate a BBC and American radio warning to Slovene war criminals.

IX. MU (Including Shipping Operations SO)

()

Shipping Operations and activities take similar forms in the two principal areas in which MA is operating, i.e., in the Adriatic and the Aegean seas.

Yusoslavia .- In general, the shipping work out of Bari consists of maintaining and operating supply vessels to Yugoslavia and establishing maritime points on the Dalmatian coast to receive personnel and supplies.

According to the report from Lt. E. G. Wilson, OSS has managed to gain control of 37 Yugoslav ships from 30 to 150 ton capacity each, which now constitute a shipping service

between Bari and the Dalmatian Coast. These are manned by Yugoslav crews. We work with the British at Dari and have an officer located at Vis to supervise at that end. Supplies have been shipped to the Partisans by this service, consisting principally of small arms, munitions, food and medicines. Recent reports Indicate that one British and nine Partisan vessels left for Vis, carrying 796.5 cargo tone, including heavy AA guns, jeeps, etc. This is in connection with the joint OG-British operation. Early in February, Partisan vessels were loaded and despatched from Monopoli, carrying 613.5 cargo tons. Also, a schooner left for the name area loaded with barbed wire, while in still another week, five more Partisan vessels and one British LTC were despatched, carrying 425.9 tone of cargo. Judging by these reports, it may be concluded that the average sent curing the month is in the neighborhood of 500 tons per week. A sticker bearing the British and American flags is being placed upon goods delivered to the Partisans. (A sketch of it was forwarded here.)

The shipping service is also being used to bring back refugees on return trips. Recently, there were three cargo schooners returning from Greece bringing a total of 965 refugees.

area continue to be that of supplying various bases by the use of calques. At this time there are two marine bases

- 13 -

MP SECRET

located in the Aegean, f.e., Boston and Dahlin; also, there is a large maritime base located in Cyprus at Karavastasi on the northwest coast of the Island. In a report dated 21 Pebruary, from Cairo, it has been stated that there was at present 22 caiques in operation, the largest being 25 tens and the smallest 37 tens. To break a supply bottle-neck, a 120-ton cargo schooner has been requisitioned for one north. Several new caiques have been secured, with the plan of installing new engines in them.

At the present time there is a plan under way that, with one fast boat svailable, raids can be made upon the German calques operating in the Aegean. This is especially important since the Germans occupying the various islands in the Aegean are greatly dependent upon these supplies transported by the calques.

A successful attack on ten enemy torpedo boats by British was made possible by intelligence supplied by one of our missions in the Aegean.

A training area for a special group of the Greek contingent has been opened at Manfredonia on the Italian Coast, where intensive work on D-Day plans is being carried on.

X. 94

Twenty officers and 191 emlisted men, including OG's, and British Commandos, under the command of Lt. Col. Churchill, are now based on the Island of Vis. Since the Termans occupy most of the islands, and threaten Partisan supply lines, they

- 11 - TOP SECRET

TOP SECRET

have been sent to Vis to help keep the supply lines open.

Partisans have put up fortifications on the Island with pill homes, anti-tank gums, etc. The presence of Allied troops is helping the morals of the people. If Vis is successfully held, the units plan to conduct raids on energy garrisons, assumition and shipping hidden among other islands. A reconnaissance party from Vis, led by an OG officer, landed on the neighboring island of / Hvar on February 20. He energy shipping was found and the energy was too strong for the raiders to attack. However,

OZNIK MARCHES

XI. COMMENCATIONS

valuable intelligence was secured.

()

The most significant feature of Communications 44 that new weather report circuits were successfully inaugurated between Vis, Bari and Cairo. Reports were retransmitted with respect to weather information to the 15th Army Air Force in Bari and them by radio to the airfields in Cairo.

The new OSS radio agent; school near Cairo is now in full operation. It is well arranged in the villa, with eight on the faculty. As of the middle of February, there were 32 operators who graduated and 76 were taking the course.

23 men from SI had graduated, with two now taking that course.

The weekly number of messages appears to rum approximately 500.

- 15 - SECHET

MP SECRET

III. MICE

hereal supply functions have been carried on and a hereastrans established at Bari, with Major Bugane Bavis as Services Officer. It is becoming increasingly apparent that Bari requests for supplies of all kinds — housekeeping, operational and for the guerrillas — cannot be satisficatorily met by the supply services of the Middle Hastl Caire's own requirements will soon be greater than the steeks in hand.

PAR BAST THEATER OF OPERATIONS

(SOUTHEAST ASIA COMMAND)

REPORT

ERPRIMPY 1944

I. GEVERAL

The Southeast Asia Theater operates under the direct command of Lord Louis Mountbatten, Supreme Allied Commander.

Plans for all quasi-military operations are submitted to the upp Division of Lord Mountbatten's headquarters for approval.

SEAC relations with upp Division have been excellent to date.

of SOE, SIG, and OSS. Coordination was impossible previously, because the two were under different commanders. The staff officer in charge of MPR Division is British Captain Garmons Williams. SOE, SIS, and OSS each has its representative on his staff. OSS has emperienced a hostile attitude on the part of SOE, but relations with SIS have been frank, friendly, and coordination under MPR Division has been successful.

Delhi to Ceylon. Present activities consist chiefly of procuring sites, setting up, supplying, procuring personnel for new bases at Colombo, Trincomalee, Kandy.

Activities which SEAC intends to emphasize are: Intelligence in all parts of the Theater, Research and Analysis, Waritime Operations of a coup-de-main type requiring light

TAD SECRET-

planes and motor boats, morale subversion, and the development of special tastics and weapons.

INTALLIGENCE

II. SI

Major Schultz is the only SI representative in Delhi. He has been working with the USAAF on detailed target studies of Bangkok. Dr. Dillon Ripley is in charge of SI in Ceylon.

III. <u>I-2</u> IV. R&A

Lt. Colonel Robert B. Hall, Chief of R & A, has the largest, and perhaps best organized branch in New Delhi. It recently completed "Situation Report #1, "a thorough study of military operations, communications, economics, political and psychological intelligence in Burms. Further achievements consisted of compiling "P" source reports, producing a thousand file cards, largely short translations from Japanese and Chinese intelligence, etc.

V. CD

OPERATIONS.

VI. 30

VII. AIR ACTIVITIES

VIII.WO

No MO representative is in New Delhi at present, nor are MO plans for MEAC being presented yet to "P" Division.

Plans for this area are well organized. A special portfolio of leaflets, pictures, and other subversive material has been prepared in Washington, and samples forwarded.

Mp server.

IX. MI

General Donovan just proposed and approved a program to set up immediately in SEAC a nucleus of selected men, officers for Maritime work. Major implementation of the Maritime Unit in SEAC depends upon General's success in getting more marine, navy personnel, and hoats. Lt. Fisher Howeris already in Ceylon. Chief MU problem in SEAC: obtaining fast service craft. The General's efforts may now make them available.

X. OG

(_)

XI. COMMUNICATIONS

XII. SERVICES

This Branch is well organized, functioning smoothly.

Principal recent achievement: obtaining generous shipments of supplies and blanket TCA for water shipments of personnel.

XIII. OTHER BRANCHES

XIV. WASHINGTON CONSIDERATION AFFECTING THE FIELD

Chief Washington decision affecting SEAC is the Navy's statement of inability to provide boats for this Theater.

As has been noted earlier in this report, General Donovan is now working on this problem.

Work on personnel allotments has proceeded. At present the allotment is 763. Possibly it will be increased.

(CHIMA)

Colonel Coughlin, Strategic Services Officer for OSS in China, with headquarters in Chungking, has under his authority all OSS operations in this area, as well as those carried on

by Detachment 101 in Nazira, India. He is also Deputy Director of SACO (Sino-American Cooperative Organization).

i. SACO (China)

Principal recent Washington decision affecting OSS China is the clarification of SACO-OSS relationship. OSS and the Navy will each have individual commands and each will report to General Tai Li direct. He will be asked to add another Deputy Director to SACO. OSS and Navy both agree to work toward keeping the complete SACO effort directed against the enemy and to stay outside all Chinese matters.

As a result of recent changes worked out among the three cooperating groups of SACO, all but two of seven camps in China started under the direction of Captain Miles will henceforth be regarded as strictly Naval operations. The two remaining camps, Humbers 5 and 6, will operate with OSS funds and personnel, with the cooperation of the Chinese.

Camp 6 is the Thai Group, consisting of 22 officers and men under Colonel Kharb Kunjara, Free Thai Army. They established themselves at Szemao, near the Thai border, late in January. Among them is Nicol Smith, finance officer, who wrote recently that the unit is set up in three buildings with a pagoda for the radio outfit. Townspeople are extremely friendly, the group is in excellent spirits and the Colonel mad expected to enter Thailand between the 15th of February and the middle of March. Since this time certain political questions have arisen which are holding up this expedition.

SECRET

Two important Thai persons, Tularaka and Tilaka, whom we brought to Washington, agreed with the Thai Winister here that for political reasons Kunjura should not be the one to enter the country. Present plans call for an important Thai personage to be brought out of the country to establish a Thai government in exile. His escape is to be effected by submarine which it is hoped the *P* Division will make available sometime in April.

Camp 5, the "Meynier Mission," like the Kunjara Mission, is being held up by political considerations. With the blessing of Miles, French Commander Meynier, with 8 French officers, 2 enlisted men and 18 native soldiers, established themselves at Nanning some five months ago, their avowed purpose being to send 80 and 81 agents into Indo-China where Meynier elaims to have important political connections. Operations were suspended in October, 1943, by General Petchkoff, Free French representative to China. Colonel Emblanc, Petchkoff's executive officer, explains that Petchkoff wants Reynier to coordinate the activities of his group with those of other agents which the French have in the same theater. Emblanc insists that the Meynier Group expand its work beyond intelligence and small sabotage to the larger field of organizing resistance. To be effective, says Emblanc, such resistance must be outlined within the framework of a plan which coordinates and synthesizes the efforts of all French agents and groups in the area. So far, in this matter, OSS has heeded

-s- Tu aconet

the word of Petchkoff, the French official of highest authority, and has not insisted upon Meynier's following his original plan. Some useful intelligence has already been gathered by members of the Meynier Group. It is possible that the unit will accept directives from General Petchkoff and proceed to do good work.

ii. DETACHMENT 101 (China)

I. General

Detachment 101 has its headquarters on a former teath plantation at Maxira in the Indian Hill country. From the hub of this central training camp, groups have radiated into the field. Their general function is the undermining of Japanese positions by all forms of harrassment, widening the scope of sabotage and subversive activities, organizing Burmese resistance, and supplying intelligence to the Allied Army from behind Japanese lines.

INTELLIGENCE

II. <u>Sī</u>

Operations from Detachment 101 began as 50 activities but have developed into primarily those of an SI nature. Eight groups of from two to thirty individuals are at present keeping up a constant stream of information from inside Japanesse occupied territory to various Allied Army headquarters and fighter commands.

One group, for instance, called "Forward," at present has give radio operations in the vicinity of Myithyina, Fort

Harrison and Southern Triangle in Burma. They have one agent with whom they are in constant touch by radio who has access to all Japanese installations in northern Burma. His recent report of a trip through Mandalay, Maynyo and Sagaing contained many items of military importance, such as the location of airdrome operations, storage dumps, and other installations.

A second group, named "Oscar," is operating in the area of Mangkyi, gaining information of the Japanese in that area. This group rescued the crew of one crashed plane of the ATC.

A third group has given accurate reports on the results of air action against enemy-held Myitkyina, designated remunerative targets to the air corps, captured one Japanese lieutement from a crashed Zero and sent him in for interrogation, and rescued two American combat pilots shot down in enemy territory.

A fourth group, called "Knothead," has four radio stations situated at various points along an important highway in the area of Mogaung-Maingkwan, an area frequently mentioned in headlines today. Their reports have been most valuable to General Boatner in maintaining his intelligence of the Japanese activities on his immediate front. They have supplied the Air Corps with pinpoint locations of Japanese concentrations and installations, and bombing results have been excellent. This group has come to grips with the Japanese in hand-to-hand combat. Two recent encounters resulted in 24 dead Japanese.

- TOP SENTE

THP GELAN

The activities of all four of these groups are closely coordinated with allied military forces in this command and their work has received high praise from the military authorities.

Two difficulties confront SI activities in this area -lack of adequate personnel and lack of adequate security.

The intelligence section new consists of Major Aitken and,
temporarily, Captain Chester Chartrand, who evaluate the information coming almost continuously from our agents in the
Field and disseminate it to various military officers of air
and ground forces in the critical areas.

Security at present is merely the individual responsibility of persons on the post, except that a small number of Gurkhas guard the various buildings and installations at 101. The estimate for a complete section calls for a total of some 72 individuals, immediate extension of work is dependent upon the arrival of a cartographer, a security officer, a clerk to prepare intelligence summaries, and a small group of enlisted men for duty on ground defense.

Future plans, which are dependent upon the needs just outlined, call for the extension of present activities. Three groups have been trained, equipped, and made ready for operation:

a. The "Tula" Group consists of 2 Kachins with radio to operate in the area of Bhaso-Namhkan in order to gain information of Japanese activities, installations,

TOP SECTION

airfields. They will be put into operation by night airdrop.

- b. The second, the "Demax" Group of five Kachins, has been specially trained in the use of small prepared charges and light incendiaries for the purpose of destroying Japanese installations in the Bhamo-Katha-Mohnyia area.
- ing Anglo-Bursess, the leader of whom is a former head of the police in Lashio. Their mission is to report by radio information of Japanese activities and installations in the area of Lashio, Mandalay. They, too, will be put into operation by night airdrop.

The summary attached to the rear of this report brings us up to date on the activities of the various groups operating from 101, some of which have already been described.

III. X-2

IV. RAA

V. CD

VI. 60

Activities described under SI are, for the most part being performed by SO personnel.

VII. AIR ACTIVITIES

038 air activities in the Par East consist exclusively of the dropping of supplies and personnel. When agents and

- 9 -

TOP STURE!

supplies must be dropped into the Field behind enemy lines we borrow transportation planes and fighter escort from the nearest U. S. Army fighter command. Most of these drops have been successful, but on January 18 three C-47's, although escorted by a top cover of eight fighter planes, were approached from below and shot down by Zeros. Entire crews of two planes and all but three from the third, a total of some twenty men, were killed.

VIII. MO

At the request of General Donovan, Lt. Commander Taylor inspected the possibilities of morale operations in connection with SO operations at 101. In his opinion, opportunities are excellent. MO purpose will be to destroy the hold which the Japanese have gained over the general population in occupied Burma through terrorism and propaganda. According to Commander Taylor, the most effective type of HO operation for this theater is that which is apparently a spontaneous activity of the natives. We should supply the impetus, the organization, and the direction but matives should do the actual influencing in ways that they understand. To do this job, one good MO can should be percanently assigned to 101 to advise on operations. One highly intelligent and literate native from each of the language groups with which we shall have to work should be recruited and trained in MO principles and techniques. He will then train agents, draft and revise leaflets, advise on operations.

- 10 -

TOP Stuff!

Before effective NO operations can be launched, a great deal of information must be obtained about conditions in occupied territory — some by secret agents, some by research in Delhi and Washington. Evidence of schisms in enemy ranks, low morale among Japanese or Burmese groups, taxes, regulations or any conditions causing general hardship, native supplications, omens or prophesies, atrocities, persecutions or scandals among Japanese officers and Burmese officials, are types of information which may be used as a basis for operational procedures by NO.

The chief problems facing MO are:

- 1. Recruitment of key personnel with special knowledge of target areas and native languages.
 - Recruitment of native agents and assistants in U.S. and overseas.
- 3. Development here and overseas of a training program more adaptable to Far East special needs.

IX. WA (XU)

In late January a small party approached the Bassein area in an attempt to land a group. This party found its . landing spot under the observation of a hostile vessel and returned. Another attempt will be made. Their purpose is to provide intelligence on Japanese activities and installations. Except for a rescue mission of nine officers and men from a plane forced down in the Bay of Bengal by the OSS rescue boat, this is the only specifically Maritime operation from 101 to date. However, Ensign W. B. Shepard has outlined an extensive training and operational program to be carried out when adequate

IUP SECT

TOP SEUKET

personnel is made available. His program includes:

- a) The landing of agents along enemy coarts who may be picked up again and brought out at a later date.
- b) Reconnaissance with P.T. boats, fold boats and silent motor surf boards for night and day observation of enemy shores, shipping, installations and harbor defenses.
- c) Attacks by gun fire using P.T. boats, supplies and troops.
 - d) Landing of small raiding and sabotage parties.
- e) Landing gums, in localities where natives are known to be friendly.

Five officers and 27 enlisted men are needed to carry out the Maritime plans envisaged by Ensign Shepard.

Ensign Shepard has at his disposal already one 63-foot air resche type craft to be used for general training at the base camp. He describes as his needs two P.T. type craft, one 42-foot launch for supply vessel, 20 088 fold boats, and miscellaneous items.

X. OG

XI. COMMUNICATIONS

Since the reports by radio from agents in the Fieldconstitute the most important part of our SI work, Communications is the sine qua non of our network of operations. The
main Communications base is at Detachment 101 with sub-bases
in the Field. From the sub-bases, agents equipped with compagt sending sets penetrate enemy lines and broadcast intelli-

- 12 - Parity and and a second

TOP SECRET

gener back to the sub-bases. Approximately twenty-eight reporters are now relaying information. The personnel of the
Communications Section at 101 consists of thirty persons.

Our network of radio intelligence could be vastly extended
if personnel and equipment were increased.

In the past two months the base station at 101 has set a new record for the number of messages handled. The technical details of frequencies have now been carefully worked out so that the base station knows the frequency of every agent sending set in the Field. This means that, should a sub-base be put out of commission for any reason, the main base could receive the agent's message.

There are 45 student radio operators in training in nine different camps. Of these, seven are being trained as base station operators and 38 as agent operators.

an ever present technical problem is that of supplying adequate power to the agents sending sets. The only answer to this problem so far is the use of hand generators, which must be turned two hours for every hour of broadcasting.

XII. SERVICES

Services Branch has expanded its activities greatly over the past month. Supplies for all the Far East are sent to OSS warehouses in centrally located Calcutta and routed from there to the various detachments. In January and February there were 77 shipments, totaling 341,435 pounds. During the

TÜF SECRET

first eleven days of March, 600,000 pounds were sent.

Most of the supplies received at 101 come from Army stores for which application is made by 101 to the Theater Commander. These consist mostly of assumition, field equipment and clothing and are supplied free of charge by the Army to 988. Material sent from here consists chiefly them of materials difficult to get from the Army, such as communications equipment, trucks, and arms specially designed for our uses.

The \$100,000 a month, allotted by Special Funds Branch to 101 is expended in salaries to agents and other civilian employees, and for supplies and food purchased from local Mazira people.

A. Training

are instructed by a captain, a 1st lieutenant, three sergeants and four natives for Kacmins, Karens and Burmans. A minor problem is that some recently arrived instructors must be given refresher courses before they begin to teach the students. The only real problem of the school at present is that of personnel.

B. Field Photographie

Headquarters for Field Photographic in the Far East are at 101. From nere, one enlisted man has been sent to Ceylon to make photographic records of OSS developments in that

several photographic missions from there. The chief activity is at 101 where the unit under Commander Ford is making a picture of 101 activities. According to the Peers Report, the photographers are doing an admirable job. Two are in the Field — one having been dropped by parachute, and another having parachuted to another base by land. All activities of Detachment 101 are photographed, one photographer being killed when the/dropping food to Commander Luce were shot down by Japanese Zeros. To date mome 14,000 feet of film has been received at the Washington laboratory. It is plenned to make a series of short films to show to officers and men going to the Theater to give them some conception of the conditions awaiting them. The chief need is for combat cameras.

COMMUNICATIONS

Personnel.

During the month of February, total officers and enlisted men in all theaters was 665 and the total in training or transit was 292.

Personnel on duty and in training, and requested transfers, broken down by Theaters, are as follows:

	On Duty	In Training	Requested Transfers
FATG FATG FTO FETO Continental U.S	59 110 281 37	40 6 101 128	4 7 59 22 15
Continental U.S Special	60	20	

Recruitment of new Communications personnel and the number reporting for training or processing for immediate shipment reached an all-time high. The Branch is now fully recruited against the existing table of ogganisation. At the present time training is being received in two Communications training camps, areas C and M, where the total students in training are 93 and 92, respectively.

Supplies and Equipment.

Major items of shipment totalled in all 79% tons, including 253 of the SSTR-1 sets (basic agent sets) and lll RBZ receivers (radio receivers for Resistance groups). The monthly shipments of SSTR-1 portable field sets increased 96%, with the grand total shipped thus far to all theaters of \$12.

Adequate supplies of these sets for the European Theater (especially the Sussex Plan and the Jedburgh Plan) are on hand, and current shipping schedules will take care of field requirements during 1944.

()

The requirements for RBZ receivers in the European Theater prior to the invasion are expected to be set. One thousand such units are ready for shipment to NATO at this time.

- a -Tu: SECRET

Field Photographic Branch

During the month of February, a total of 35 motion picture and still camera crews were used in the production of photographic reports for OSS and other war agencies. A total of 539,997 feet of 35 mm. film and 50,166 feet of 16 mm. film were processed by the Washington laboratory. The films completed during the month included the following:

"National Gallery of Art", for the National Callery
"Spars" for the Navy - Coast Guard

Whine Sabotage" for SO

()

There are at the present time units of the Field Photographic Branch working at Washington, Hollywood, Brazil, Chungking, London and China-Burma-India area. With respect to Washington, the number of camera crews employed in the metropolitan area were 18, and outside the metropolitan area 2. There were also 13 still camera crews actively engaged during this period.

In addition to photographic work, the branch has been active in iconography. They have prepared booklets on Iconography, Perspective through Jeriscope, Pilots Iconometer and Underwater Depth Determination. In addition instruments have been built for the Iconoscopic section to be used for Colonel Haskell's mission, and for SI.

The Hollywood unit has for the past 18 months been working on a highly secret project for the Joint New Weapons Committee and the Office of Scientific Research and Development. They have made a complete photographic resulting all

tests that have been made.

()

The photographic work on the project in Brazil is more than three-fourths completed. To date, a total of 110,000 feet has been exposed, of which 10,000 feet was processed by the washington laboratory during the month of Pebruary. Film is being assembled and edited for a series of pintures on South America. The expenses of this project have reached an estimated \$65,000, of which the Coordinator of Inter-American Affairs is paying everything in excess of \$25,000.

Concerning the Chine-Burna-India area, a group of two officers and eight enlisted men are working with Detechment 161. To date some 14,000 feet of film has been exposed, and it is planned to make a series of short films that may be shown to officers and men going to the theater to give them some conception of the conditions they will find there.

The reports with respect to England and Chuncking are not covered in this report.

PORRIGH HATIONALITIES

(}

- A. An increasing demand has become very noticeable for copies of Foreign Nationalities memoranda and bulletins. When Ambassador Biddle returned recently from London he spoke of "the inexpressible value" which he found these papers to possess in connection with the work he did with the Governments-in-Exile. Similar expressions have been received from other Government representatives abroad as well as representatives of OSS.
- The work of the Foreign Nationalities Division ineludes a variety of Field Studies of Foreign Political Activities in the United States. Among these are the followings
 - a) Foreign Nationality Group Neetings. A total of 36 Group Neetings were attended during the month of Pebruary, of which the greatest number dealt with Polish, German-American, Lithuanian, Zionist and Italian organizations. Reports were prepared upon the meetings attended;
 - b) Situation Reports on Foreign Political Activities and Reports from Field Representatives.

 A total of 57 Situation reports were prepared, dealing particularly with middle European countries now under the hegemony of Germany. There were also reports from Field Representatives totaling 166, the

TOP SECRET

largest number of which dealt with Yugoslav, German, Polish, Czechoslovak, Italian, Austrian and French groups.

- e) Foreign Language Press Readings. 891 reports
 were received based upon the reading of foreign
 language newspapers. Particular attention was devoted to the editorials and comments appearing in
 the foreign language press concerning the Russian
 constitutional changes, the future of Slovakia,
 an announcement over the Vatican radio with regard
 to Tito, relations between King Peter and the Yugoslav Partisan Government, the Arab Nationalist
 Movement in North Africa, the proposed Americancontrolled pipeline, references to the **Peace Now**
 movement in the German-American press, Secretary
 Hull's warning to Finland to withdraw from the war,
 Isvestia's attack on the Vatican, and others not
 specifically referred to.
- C. Reports Submitted During the Month.—The reports below were submitted by the Foreign Nationalities Branch during the month of February. They were distributed within OSS, to DNI, MIS, State, Justice, Censorship, etc.:
 - B-152 Foreign Political Issues in American Life;
 - B-154 Labor Council Organised to Combat Polish-American Mationalism;

Current Intelligence Staff.

In edition to the contributions of the JIC Weekly Summary, this Staff is propering the PW Weekly, Daily Intelligence Summary, Oral Theater Reports, Situation Reports, Weekly Airgram to the Outposts, and special discominations which include a new assignment during the month of editing and clearing special reports to be forwarded to the Alminiatration secretary of the Joint Chiefs of Staff.

Max Division.

The Mag Division accepted requests for 107 new maps, and completed 92 during February. The requests for new maps may be broken down as follows:

Office of Strategie Services (including Jeint Army-Kavy Intelligence Staff Civil Affairs Division Others

11.12

Joint Chiefs of Staff

21 -

Office of Mayal Intelligence

8 -

TUE SECRET

War Department (Special Services)

Lar Department (ASTP)

107

The volume of work may be illustrated by the following figures:

Map Disbursements 21,117 titles and 38,252 sheets

Color Prints Distributed 1,341

Topographie Models:

Requested 22 models, including 2 new models
Completed 17 nodel
In Frogress 25 nodels

The most startling change in the monthly disbursement of maps has been the increase from 1,863 to 10,722 sheets sent out to the OSS field.

Of the 1,341 celor prints distributed, 564 went to the Chief of Staff of the Army, and 291 to the Army Air Forces.

During the month of February, the only new model completed was No. XXXVII, North Italy Extension. In addition,
however, there are twenty new models in progress as follows:
Axores; Western New Guinea; Canary Islands; Northern Greece
and Albania; Kamehatka; Southeast Asia, Parts 3,4,5 and 6;
Kuriles; Southwestern France; Southeast Europe, Parts 1,2,3,
4 and 5; Denmark and Southern Norway; Central Norway; Greece Crete combination; Northern Italy and Adjacent Areas.

SECRET

The twenty-two requests for new models and emplicates

come from the following sources: Secretary of War 9; Chiefs

of Staff 1; Constian Army Staff 5; General Donovan 2; General

Ward (Pield Artillery School) 3; Special Devices, USE 1;

Southwest Pacific Section 0-2 1.

1

Personal Political.—Civil Affairs work is in progress and represents the largest single commitment of this Division. The Division has three major sub-divisions, viz. Economic, Geographic and Political. The work of all three includes the evaluation of SI documents.

Activities of the Economic sub-division include special work by the Oil Section for the State Department, a series of "struggle" studies in which there is examination of the conflicts of interest in various industries and commodities, also prepared for the State Department. In the field of agriculture, work has been done on requirements in occupied or liberated areas by request from UNRRA, FEA, and the International Division of the Army.

There has been continuous work on cartels as well as civil affairs. Respecting the latter, a number of civil affairs handbooks and projects were completed by the Geographic sub-division with respect to Germany.

The Political sub-division, divided into seven geographical sections has completed a wide variety of reports and surveys.

- 3 - TOP SELECT

During the past month commentations were resolved from the following: 1) men on the FEA staff, by latter; 2) the Cartal Commission; 3) the Chalman of the Range Oil Commission; A) the salarie Civil Affairs Division (on Italian inflation with); 5) GHZ; 6) the Chief of Organizations and Propaganda Analysis Section, Department of Station, by letter; and 7) the Department of Station, by letter; and 7) the Department of Station,

Division.

(]

As a result of expression of "great interest" by the Chief of the Division of Fisancial and Memothry Affairs in the Department of State, the Division is properly a long report on Associan Way Demage and Probable Reparations Claims.

Parthermore, draft copies of the Division's Microckly. Mituation Report are being submitted before publication to the Division of Mastern European Affairs of State for informal review and comment.

The Eastern European Branch of MID has given us complete ecoperation in the preparation of an up-to-Mate railway map of the USBR which will be issued by the Map Division of OSS.

This Division also has received, during February, five

--- Tur secret

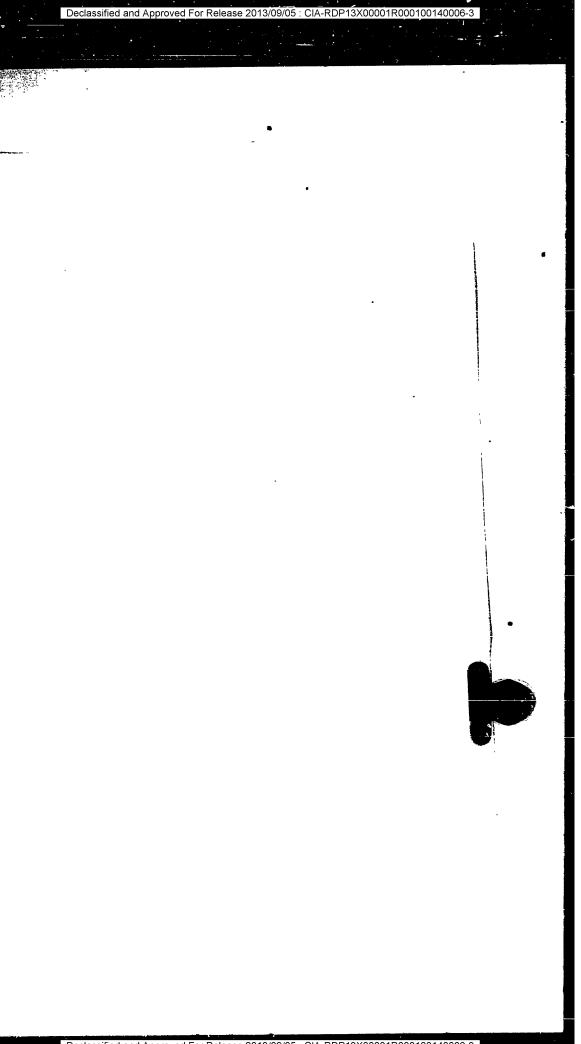

special requests from high sources for PNUSH' reports. They were able to supply the information requested and to meet the deadlines. Three of the reports were prepared for JIC, as follows: 1) Publicly Announced Attitude of the USSR toward Germany; 2) The Finnish Situation; 3) The Import of the Seviet Constitutional Change.

In addition, the Division prepared a report on logistics in Eastern Siberia at the urgent request of the Target Information Branch, Operational Division AAF, and a report, at the request of Mr. Donald Melson, on the Magnitogorak Ferra-Metallurgical Combine.

Far Fast Division .- Twenty-six important reports were completed during February, most significant of which was the topographic study of Shimushu (northeasternmost of the Kurile Islands).

The <u>Latin-American Division</u>, <u>Central Information Division</u>, and <u>Interdepartmental Countities</u>, though active during February, are not treated specifically here.

,. TOP SECRET

PROPERTY OFFICE

0

Daring the month of Pelsonny, 1,161 full security investigations were completed as compared with 1,373 for the month of January. New cases instigated are falling off, which has permitted the Security Office to reduce the manber of pending security investigations — new approximately 500; the average lapsed time for investigation has also been reduced.

A trip was taken to the training areas on the Pacific Genet by Lt. Rebert E. Clarke, where he outlined area pre-cautions taken in the East for segregation, training leaves, and other pertinent matter. Security aspects for all areas visited were deemed unusually good.

Particular attention was devoted during the month to establishing security procedures in overseas transportation; 226 persons alerted were "briefed" during the month.

TAD SECRET

SCHOOLS AND TRAINING

- 2. The MO finishing school was established at Area F and plans for training all MO students there were effectuated during February. The MO school will be of three weeks duration two weeks spent on basic training and one on advanced training. This relieves pressure on RFU-11, making it possible to concentrate on SI, X-2 and a few SO students who are entered there.
- 2. Difficulties of recruitment are reported owing to the caliber of the officers recruited through personnel procurement. As a consequence, requests have been made for the transfer, either within 065 or out into general service, of some men who reported for duty.
- 3. During February, a total of 913 men received instruction in the various camps. The instruction program and use of the Areas may be summarised, briefly, as follows:

ATTOLA

A-2, 69 students.

Used as a holding area for personnel awaiting security check and those awaiting transfer out of OSS.

4-3, 46 students.

Basic SO-MO course.

A-4, 46 students.

Paramilitary, to a large extent for students from the SO Branch. This course was expanded from

SEGRET

TOP SECKET

two weeks to three weeks. It is regarded as an adequate program for those enlisted men who have not had their basic training.

A-5, not used.

Area B - 28 students.

There was little training here.

<u>Area C</u> - 112 students, including six from other branches.

Training of OSS Communications Personnel, with additional courses.

Ares D - 45 students.

()

The state of

Paramilitary training, largely for SO personnel, $\underline{\underline{Area}} = -36$ students.

SI-80 basic training school, together with courses on counter-espionage and related agent work.

<u>ires I - 252</u> students.

Training area for operational groups. There was a sharp drop in the number enrolled.

Area X - 80 students.

Preliminary training for Communications, pending the completion of security check.

Area S - 132 students.

The assessment school.

<u>Area RTU-11</u> - 37 students. Finishing school for agent branches, predominantly SI & X-2. This area has now been relieved of HO training.

-2- Tur Secret

TOP SECHET

Area WA and WF - 36 students.

()

The Maritime Special Swimming group who had been training at Camp Pendleton moved to Camp WA on Catalina Island. It was planned to give this group tactical exercises in off-shore approaches to land, using various devices such as surf boards, kayaks, paddle boards, etc.

Recruiting for an additional swimming group has already been started, but beyond this the future use of these areas remains still undetermined.
