Approved For Release 2000/05/22: CIA-RDP61S00527A000200020002-2

SUBCOMMITTEE ON TRANSPORTATION

of the

EXCHANG INTELLIGENCE CONMITTEE

Review of Activities and Accomplishments During Miscal Year 1957

A. Activities of the TSC During Fiscal Year 1957

1. Review of the Intelligence Product

No formal program has been established to review the adequacy of the transportation intelligence product. However, the joint research activities of the Transportation Capabilities Estimating Group and TSC review of interagency research projects have been beneficial in assuring adequate production efforts on such subjects as agreed basic transportation statistics, and the development of specific research techniques for uniform methodologies for determining rail, port, inland waterway, and highway capabilities. It has been agreed that the Subcommittee on Transportation (TSC) will review reports prepared by the Transportation Capabilities Estimating Group which are pertinent to the mission of the Economic Intelligence Committee (EIC), and that such reports will be published as EIC reports.

2. Research and Collection Deficiencies

a. Research Deficiencies

During Fiscal Year 1957, the Army continued its work in preparation of priority research and collection deficiencies on the European Satellites.

The Secretariat concluded its review of the Air Force paper on research and collection deficiencies for civil air, and this draft was circulated to the TSC membership for review and comment.

Details on progress and plans for the resolution of priority research deficiencies are presented in Ammer A to this report.

25X1X1 b. Collection Deficiencies

George de production de

Members of the TSC discussed the IAC post-morten on NIE 13-56 and reviewed their outstanding requirements and planned research programs to determine the extent to which they would resolve existing deficiencies.

3. Review of Substantive Papers

The only substantive paper reviewed by the TSC during Fiscal Year 1957 was the first draft of a revised paper, Capability of the Trans-Siberian Railroad and Connecting Lines in Manchuria and North Korea. This paper is now with the Transportation Capabilities Estimating Group for resolution of difference among member agencies of the TSC.

The TSC membership continued its close lisison and coordination of research programs, particularly those projects concerned with the annual estimate on Chinese Communist capabilities, and the transport section of RIC-R1-S6. "Communist China's 1956 Trade and the Transport Involved."

4. Review of External Research Proposals.

The TSC reviewed and prepared comments on an Air Force external research proposal, "Development of Space, Time and Movement Factors for an Economic-Military Model."

5. Maintenance of Agreed Basic Statistics

The TSC made some progress in 1957 on the resolution of differences held by member agencies on rail transport statistics for Communist China.

CIA is continuing its work on the revision of agreed statistics, and the resolution of a few remaining differences, on the following countries:

6. Projects Undertaken at the Request of the EIC or Proposed to the EIC

The following projects were undertaken at the request of the EIC:

a. EIC 8 (WSEG) Research on this project, continued in Fiscal Year 1956, is still incomplete, except for the reil transportation

section. The sections on the remaining forms of transport and requirements of the economy will be undertaken by the Transportation Capabilities Estimates Group upon completion of the revision of ENC ROSI.

b. Revision of EIC R9SL. This project, "Capability of the Trans-Siberian Railroad and Connecting Lines in Mancharia and North Korea," has been completed in first draft. A final draft should be completed within a very short time.

25X1X7

25X1X7

- Chinese Communist Capabilities and Probable Course of Action."

 These discussions contributed to the preparation of an estimate by the IAC representatives on this subject.
- d. EIC RL6. The TSC is now engaged in the coordination of a part of the overland transport section of this annual project, "Communist China's 1956 Trade and the Transport Involved."
- e. Exchange Papers. The TSC approved a paper prepared by the Righway Capacity Working Group on "Exchange Visits with the USSR and Foland in the Field of Highway Transportation.

A Working Group was also established to consider a similar exchange in the field of civil aviation, and the TSC approved a paper prepared by this group.

7. Intelligence Research Techniques

Members of the TSC have engaged in continuous discussion of research techniques to be used in preparation of the reports listed above. The four transport capability methodology working groups also continued their work during the year.

The Duland Waterway Group completed its draft Wathodology for Computing Inland Waterway Capabilities. This draft was accepted by the TSC and will be tested by TSC numbers. The paper has also been sent to US industry for testing and comput.

A preliminary draft of a paper on "Methodology for Computing Port Capacity," based on the factor method, has been completed by the Port Capacity Working Group, and is now being reviewed.

The TSC also discussed from time to time the general outline of the "Methodology for Computing Highway Capacity," which is being prepared by the Highway Working Group.

Work is continuing on a "Methodology for Computing Rail Carecity."

8. Coordinating Functions of the TSC

These actions are typified by the activities discussed under items 6 and 7.

9. Evaluation of the Role of the Subcommittee

a. Realization of the Subcommittee's Potential

During Fiscal Year 1957 the TSC has made some progress in fulfilling its responsibility for the coordination of transportation intelligence produced by the US intelligence community. The assignments given to the Transportation Capabilities Estimating Group reflect an awareness of those areas in which the need for agreed intelligence estimates is acute. Publication of the product of this Estimating Group by the ETC should gradually narrow those areas in which the divergent views and approaches of the members of the TSC have heretofore precluded tangible accomplishment in the execution of TSC responsibilities.

The considerable progress made by the working groups on highway, inland waterway, port, and rail capacity should be beneficial to realization of TSC potential. The completion of agreed methodologies will reduce markedly, and help to eliminate, differences in final intelligence estimates made by members of the TSC.

25X1X1

b. Impediments to Efficient Functioning of the Subcommittee

The coordination activities of the TSC did not achieve the degree of success hoped for by the establishment of the Transportation Capabilities Estimating Group. The failure of this group to reach agreement on its first assignment, the revision of R9S1, has prevented advancing to other priority problems assigned to the group. The time and research expenditures involved in the functioning of this group have been extremely costly. It now appears that the resolution of many basic differences among TSC members can be effected only by the active participation in the estimating group of TSC officials at a higher level than those assigned to it in the past year.

Another problem in successful implementation of the coordination function is the continued independent research activities carried on by TSC members. The Subcommittee should attempt to exercise a more positive influence upon the direction and scope of these independent research activities, both to avoid duplication of effort and to effect a more economic and concerted attack on common problems. In this context the independent research programs of each TSC member should be presented to the Subcommittee at some point in the program planning process when they can be reviewed as the total effort

of the entire transportation intelligence community. The Subcommittee, at this point, should attempt to provide constructive comment and guidance in order to effect a more rational approach to the mamerous and complex problems and programs undertaken by member organizations of the TSC.

Such comment and guidance from the Subcommittee could also be used by each TSC member in the execution of those programs assigned to it by higher authority and whose terms of reference it does not control.

B. Future Program of the Subcommittee

1. The Subcommittee will continue to review foreign economic intelligence in the field of transportation and to identify priority deficiences in the intelligence competence of the US Government. The Subcommittee will continue its work on the preparation of the following research and collection deficiencies:

USSE Collection

1. Merchent Shipping

USSR Research

1. Merchart Shipping

CCMUNIST CHINA Collection

- 1. Merchant Shipping
- 2. Highways
- 3. Inland Waterways

COMMUNIST CHIEA Research

1. Merchant Shipping

KURCIPEAN SATELLITES Research and Collection

- 1. Railroads
- 2. Highways
- 3. Inland Waterways
- 4. Merebent Shipping
- 2. The Subcommittee will continue its program for the completion of agreed basic statistics in accordance with EKC-D-77, September 1954.
- 3. The Subcommittee will continue its remaining work on the production of agreed methodologies for determining the capacity of rail and highway systems.
- 4. The Subcounttee will continue to review the activities of the Transportation Capabilities Estimating Group and attempt to find ways to make this a more effective working group for the elimination of priority research deficiencies.

Approved For Release 2000/05/22 : CIA-RDP61S00527A000200020002-2

5. The Subcommittee will attempt to improve procedures for the econdination of independent research programs carried on by its members, and to consider proposals for external research within the provisions of DCID 15/1.

AWMEY A

PROGRESS REPORT ON PRICEITY DEFICIENCES OF RESEARCH By EIC Subcommittee on Transportation

I. RAILROAD TRANSPORTATION

Gaps in Intelligence

Progress in FY 1957 and Plans

- I. a. Quantitiative estimate of total traffic flows on strategic and economically important railroad lines.
 - 1. USSR
 - 2. China

- I. a. 1. CIA/RR 82, "The Volume and Character of Traffic on the Trans-Siberian Railroad in 1953," removes the gap for this line.
 - CIA/RR FR-152, "Pattern of Coal Traffic in the USSR in 1953," partially removes this gap.
 - CIA/RR 89, "Growth of Transportation in the USSR 1948-1956 and Prospects Through 1961," partially eliminates this gap.
 - CIA Project Proposal 20.1768, "Regional Civil Consumption of Petroleum in the USSR," will provide important data for further work on this deficiency.
 - CIA Froject Proposal 43.1957, "Development of Transportation in USSR Central Asia," will provide data for this deficiency.
 - 2. EIC Rl S5, "Communist China's Trade and Transportation," provided data to eliminate this deficiency.
 - CIA/RR 72, "Railroad Transportation in Communist China 1950-1954," partially eliminates this gap.

Approved For Release 2000/05/22 : Chip TRESC 200527 A000200020002-2

I. RAILROAD TRANSPORTATION

Caps in Intelligence

Progress in FY 1957 and Flans

I. b. Capacity of USSR Railroad lines and trans-loading facilities leading to border areas. CIA Project 43.1601, "Development of the Transportation Sector in the Chinese Communict Economy" (in editorial process) will also help to eliminate this gap.

I. b. Completion of the revision of RIC Rl S9 by the Transportation Capabilities Estimating Group (final draft now being prepared) will help to remove this deficiency.

Upon completion of the R9 revision, the Transportation Capabilities Estimating Group will undertake completion of the WSEG study - EIC-P-8, "Soviet Bloc Military Transportation Capabilities to Launch and Support Campaigns into the Area between the Baltic Sea and the Alps."

A TSC Working Group is continuing its preparation of a "Methodology for Computing Rail Capacity" which will be helpful in further work on the removal of this deficiency.

- I. c. Line capacities (including the physical details of the lines, facilities and structures connected therewith) of the most strategically and economically important lines in Communist China.
- I. c. CIA Project \$3.1601, "Development of the Transportation Sector in the Chinese Communist Economy" (in editorial process), will provide date for this deficiency.
- d. Number, type, and capability of the motive power and rolling stock, including the inventory and utilization, service ability, age, and retirement.
- CIA/RR 89, "Growth of Transportation in the USSR, 1948-1956," provides some data on this deficiency.
 - CIA Project 43.1957, "Development of Transportation in USSR Central Asia," will provide data on this deficiency.

I. RAILROAD TRANSPORTATION

Caps in Intelligence

Progress in FY 1957 and Plans

CIA Project 43.1605, "The Impact of Long Range Plans for Electrification and Dieselization of Reilroads in the USSR" (in editorial review), will provide data on this deficiency. EIC R9 S1 will provide data to eliminate part of this deficiency.

I.d. 2. CIA Project 43.1601, "Development of the Transportation Sector of the Chinese Communist Economy" (in editorial review), will provide data on this deficiency.

CIA Planning Project 43.1956, "Determination of the Transportation Contribution to National Income of Communist China, 1950-1957," will deal partly with this deficiency.

I. e. The TSC Working Group paper on "Methodology for Computing Rail Capacity" will provide some data on this deficiency.

Air Force maintains a running file of such items, publishable upon request, and is also working on target information sheets which will remove some of these deficiencies.

ERC R9 Sl will provide data to eliminate part of this deficiency.

I. f. CIA Project 43.1601, "Development of the Transportation Sector of the Communist Chinese Economy," will eliminate most of these deficiencies.

CTA Planning Project 47.1581, "Railroad Construction in Communist China," will eliminate most of the deficiencies concerned with line expansion and new line construction.

 Precise location and capabilities of USSR railroad yards, servicing and repair facilities and storage depots.

I. f. Analysis of planned development of Communist Chinese railroads with emphasis on planned rates of growth, measured both in planned traffic increases and in expansion of lines and line facilities.

Approved For Release 2000/05/22 : CIA-RDP61S00527A000200020002-2

ANNEX A

II. INLAND WATERWAYS TRANSPORTATION

Gaps in Intelligence

Progress in FY 1957 and Plans

- II. a. Quantitative estimates of total traffic flow on individual strategically and economically important waterways.
 - 1. USSR
 - 2. China

II. a. l. EIC Rl S6, "Communist China's Trade and Transportation," vill provide data on this deficiency.

CIA Plenning Project 20.1768, "Regional Civil Consumption of Petroleum in the USSR," will provide some data for use in eliminating this deficiency.

CIA Flanning Project, 43.1957, "Development of Transportation in Soviet Central Asia," will provide some data for this deficiency.

CIA/RR PR-152, "Pattern of Coal Traffic in the USSR in 1953," partially eliminates this gap.

CIA's unpublished unalysis of the "RSFSR Handbook," partially eliminated this gap.

- 2. CIA Project 43.1601, "The Development of the Transportation Sector in the Chinese Communiat Economy" (in editorial review), has some data on this deficiency.
- II. b. 1. CIA working files contain some unpublished data on vessels comprising 30 to 40 percent of total inventory.
 - 2. No progress.

The work of the TSC Working Group on "Methodology for Computing Inland Meterway Capacity" will provide research tools for work on these deficiencies in both the USSR and Commissis China.

- II. b. More precise estimates of the inventory, type and capabilities of the inland waterway fleet.
 - 1. USSR
 - 2. China

Approved For Release 2000/05/22 : CIA-RDP61S00527A000200020002-2 II. INLAND WATERWAYS TRANSPORTATION

Gaps in Intelligence

Progress in FY 1957 and Plans

- II. c. More precise estimates of the facilities and capacities of the USSR inland watervay fleet.
- IT. c. 1. CIA Flanning Project, 43.1957, "Development of Transportation in Soviet Central Asia," will contain some data on this deficiency.

Work of the TSC Working Group on "Methodology for Computing Inland Waterway Capacity" will provide research tools for work on these deficiencies in both the USSR and Communist China.

- II. d. More precise estimates on hydrography, facilities and capacities of the inland waterway routes in Communist China.
- II. d. CIA Project 43.1601, "The Development of the Transportation Sector of the Chinese Communist Recommy" (in editorial review), has some data on this deficiency.

Approved For Release 2000/05/22 : CIA-RDF61S00527A000200020002-2
