This equipment is being purchased under an Export-Import bank loan, as part of the program for improving coal production. These machines are to be used in the manufacture of bearings for maintenance and repair of coal mining machinery. It has been determined that the accessories and spare parts are for exclusive use with the parent equipment. The Polish Trade Mission has informed BFC that it is in possession of all equipment required for the production of these bearings with the exception of 5 grinding machines. In view of the importance of the mining industry to the national economy of Poland and the need to prevent or minimize production losses through maintenance and speedy repair of equipment, it is believed that this equipment is reasonable and necessary for the Polish civilian economy.

Approval is therefore believed appropriate, pursuant to PD 1315.

If the Operating Committee concurs in this recommendation, BFC will take appropriate action to obtain COCOM clearance.
