MEMORANDUM FOR: Acting Chief, IAS/OISD

SUBJECT: Identification of Hungarian Fuel Dump

REFERENCE: Your K-3101

1. In response to your memorandum of 9 June 1959, intelligence reports confirm the location of a small underground fuel dump in the vicinity of Kaba, Hungary. Although unconfirmed, the exact site appears to be 350-400 meters east of the Bojár-Hollos railroad station on the Kaba-Mándóvár railroad line. (The Bojár-Hollos railroad station is 6 kilometers northwest of the Kaba railroad station.) The installation was constructed for the Hungarian Air Force and reportedly serves as a reserve fuel dump for the Debrecen Airfield.

2. For technical data see the attached reproduction of Air Intelligence Information Report, IR-553-57, dated 15 April 1957 (Confidential).
