MEMORANDUM FOR: Document Division
Library
Machine Division

SUBJECT : Numbering System for State Department Despatches
and Non-Despatch Reports

1. Effective 12 June 1961, the Document Division will assign to State Department despatches a new seven digit control number which serves as both a control number and report number. The new system approved by the AD/CR will permit machine sorting of Library source cards and control of documents for the Document Division. This will also eliminate the use of Batch Control Sheets.

2. The proposed scheme of digit assignment for State Department despatches is attached. The letter M with the post locator will be written immediately preceding the despatch number on the processing copy of the despatch. The seven digit number will continue to appear in the same position on the Intellofax and Aperture cards.

3. The Library will continue to file source cards by post and within post by date. The aperture card will be changed to this arrangement.

4. The assignment of post locators for new post will be controlled by the Chief, Control Branch, Document Division.

5. Document Division will assign a serialized number in the M,800,000 block to those State Department reports, other than despatches, currently assigned a 4,000,000 number.

12 June 1961

Proposed Scheme of Digit Assignment for State Despatches

1. Source (Department of State) 1st position: M

A new seven position series composed of the letter M followed by six digits is proposed for State Department despatches. Since the letter M machine sorts with the digit 4, there is in machine effect no change in the series. The eye, however, can readily distinguish between the old 4 million series and the new M series.

2. Post Locator

Two groups of post locator numbers are needed. Assignment of post locators is determined by alphabetical arrangement by country and within country by post.

a. 2nd and 3rd digits

For posts commonly preparing more than one thousand despatches per year, assign a constant two digit number as a symbol for the location; e.g., London 12; Paris 09; Bonn 10. There are currently 25 posts in this class; the notation allows space for 30.

b. 2nd, 3rd and 4th digits

For posts commonly preparing fewer than 1,000 despatches per year, assign a constant 3 digit number as a symbol for location, e.g., Sao Paulo 340; Berlin 455; Belgrade 710.

3. Despatch number. 4th - 7th digits:
5th - 7th digits:

These digits may be used to record the despatch numbers. Four digits are allowed for major posts, three digits for posts with fewer than one thousand despatches per year.

Digits	Source	Post		Despatch Number			
		Locator		4	5	6	7
	1	2	3				
	M	0	1	0	0	0	1
	M	2	9	0	0	0	1
	M	3	0	1	0	0	1
	M	7	9	9	0	0	1

F-O-R O-F-F-I-C-I-A-L U-S-E O-N-L-Y

-2-

4. The aperture file will be arranged by post and within post by date. Both the control number and the date are interpreted on the aperture card. Guide cards which identify the locator and year can be inserted, similar to those now in the aperture file to guide searchers to the first four digits. For example: behind guide card 12 (London) 1961, the first aperture card is M 120001, July 1961, followed by all despatches from London until the last dated June 1962. The next guide card will be marked 12 (London) 1962.
