30 October 1952

THE MALIDUM FOR

Director of Contral Intelligence

THE JUST !

Deputy Director for Intelligence

SUBJECT:

Attendance at the VIth Pan American Consultation on Cartography, Giudad Trujillo, Dominican Republic

A. BACKOROUND

25X1C4a

1. The following report is submitted jointly by the undersioned

- 2. The VIth Pan American Consultation on Cartography was hold in association with the biannual meeting of the Committee on Cartography of the Pan American Institute of Geography and History. Attending from the United States were senior representatives from the Photo and Survey Section of the Joint Intelligence Group, the Army Map Service, the Hydrographic Office, the Aeronautical Photographic and Chart Service, the U. S. Geological Survey, the Coast and Geodetic Survey, and the Department of State. Also from the United States were the Director of the Happing and Charting Research Laboratory of The Chio State University Research Foundation and the Executive Secretary of the American Geographical Society. Great Britain was represented by the Director of the British Colonial Surveys, and France by the Technical Advisor to the Institute Geographique Nationale, who also spoke for the International Union of Geophysics and Geodesy. The Director of the International Hydrographic Bureau, representatives of ICAO and the Cartographic Office of US were also present, as were the top officers of the Pan American Institute.
- 3. The primary function of the Commission on Cartography, and of its Consultations, is to further the basic surveying, mapping and charting of the Americas, through stimulation of cooperative endeavor and the exchange of technical advice and information on new developments

Sanitized - Approved For RECURITY INFORMATION

in the field of surveying and mapping. Honorary Presidents of the Consultation were Generalissimo RaCael Trujillo Moline, Em-President of the Dominican Republic and General Hector B. Trujillo Moline, current President and brother of the fermer. President of the Consultation was Den Vicenti Tolentine Rojae, a high dignitary in the Dominican Party and Director of the Institute for Geographical and Geological Investigations at the University of Santo Domingo. As in former consultations, the technical work was conducted under nine sections: Geography Gravimetry and Geomagnetisms Seismalegy; Topographic Maps and Agrephotogrammetry; Agrammatical Chartes Hydrography; Tidee; Special Maps; and Orban Ares Surveys. The initial plenary session was held on 11 October and the formal closing took place on Sh October 1952. Technical sessions generally were held from 9:00 to 12:30 and from 3:00 to 6:30 o'clock each day at the University of Santo Domingo.

B. PURPAR

1. The undersigned attended in order to participate in the technical separts of the meetings, to observe the extent to which the nations represented were effectively cooperating in the over-all mapping and surveying program for the Americas, to obtain current information on progress in this field, and in particular to establish closer relations with senior U. S. officials present and with those from European countries and international organizations, with a view toward subsequent cooperation on questions of direct interest to the Agency in other foreign areas.

C. MAJOR ACTIVITIES AND FINDINGS

1. Tochnical Accomplishments

a. During the past two years, as indicated in their respective reports, all of the Latin American nations have made sincers efforts to increase the tempo of surveying and mapping within their respective countries, and are applying the standards resonanted at provious Consultations.

b. A major accomplishment of the Consultation was the acceptance of a recommendation to the Latin American States that they adopt the Universal Transverse Marcator Projection and Orid System in view of their present participation in a

Sanitized - Approved For Releast INFORMATION

common security pact. The UTK has already been accepted and is being applied not only to the military maps of the United States but also Condda, Great Britain (annuaive of the British Islas), all of the countries of Sectorn Europe, the Union of South Africa, and to those of Colonial areas in Africa. From the military point of view, the adoption of the UTK for most of the Western World is of very real importance. It was pointed out by the U. 5, representatives that the UTK patermoing system could be readily applied to current maps through the use of the electronic computing machines, the services of which would be made available to say of the Latin American countries at no cost to them.

- of triangulation throughout the Americas so that all mapping in the Americas can be referred to a single datum. Through efforts of the U. S. Amer, the geodetic adjustment program for Europe has provided that continent with a single datum. Within eighteen months the triangulation are extending through Africa will be completed and commented with the triangulation of Europe. A single datum for the two areas of Europe/Africa and the Americas will be possible as soon as the Atlantic even our be bridged by triangulation or other nethods now being developed. Adjustment of control to a single datum is of extreme military importance, particularly in view of guided missile programs.
- d. The seventeen Latin American nations having nooperative agreements with the Inter-American Geodetic Survey. Caribbean Gomand, gave glowing reports of the assistance obtained from this Survey. It is through this assistance that the geodetic and triangulation surveys are progressing so rapidly in Latin America. The Director of the Survey, with the assistance of staff members from Headquarters, Panama, gave a demonstration of flare triangulation at night. This method is used for bridging between points which are not intervinible. Summer of photo-theodelites placed at been stations are tripped electronically said simultaneously by the pilet of the plane from which the flares are dropped. The islands of the Caribbean are being between the the friendulation not by means of this method.
- e. In order to essist in astronomic and other chemicalisms, the Commission recommended to the U. S. Eurem of Shandards that it increase the intensity of its time signals because, in some southerly areas of Latin America, those signals are very weak or mobilingship.

- f. In all appropriate technical sections, emphasis was given to the need for increasing asrial photographic coverage for topographic mapping, aeronautical charting and coestal surveys for hydrographic purposes. Although some countries, such as Chile, have obtained extensive coverage, others are bodly handicapped by the high cost of such operations. The delegate from Colombia asked for advice from several U.S. delegates regarding ways in which his country could obtain sarial photographic surveys under some type of sesistance program.
- g. Attention was given to the review and improvement of standards of scouracy for all survey work. The majority of these had been established at provious Consultations and have been rigorously followed by the various Member States. The Consultation recommended the establishment of a Subground thee on Standardization of Cartographic Symbols. Standardization of symbols for topographic maps has already been agreed upon by the United States, Great Britain and Canada. These standards are being presented to MATO for consideration in the hope that they will be applied to the over-all MATO supplies program. It would be highly advantageous if the Latin Assertion countries also adopted those standards. Emphasis was also placed on the standardization of specifications for seromentical charts of all kinds, including approach and landing charts. Phase specifications are to agree with those established by IGAO. Special attention was given to new chart design required for jet flying, both from newigational and approach points of view.

2. Personal Chegryations

a. The Argentine Delegation made an obvious bid for leadership in the cartegraphic field among the latin American mations. This effort was facilitated by the fact that the Chairmanship of the Consission on Cartography was transferred to Argentina at the previous Consultation in 1950. All members of that Delegation were very well prepared and reported at length on each subject included on the agendas. The first Argentine Religial Cartographic Congress was held in 1951 and provided the Argentine delegates with technical propaganda fooder. Howertheless, these delegates were technically compotent and contributed to the success of the Consultation.

b. It was very apparent that the Inter-American Geodetic Survey has developed a highly efficient program of cooperation with the various survey and suppling agencies of the latin American countries. The missrous official expressions of appreciation by representatives from the Latin American countries for the assistance given by the IAGS was indicative of the good will and respect developed by IAGS personnel in the conduct of their admissions. A notable gap in this cooperative effort has been Argentina, whose government has not yet signed a cooperative agreement with the IAGS, although repostedly urged to do so.

c. As visitors to the Dominican Republic, it was obvious to the U. S. Delegation, at least, that Generalizates Projille continues to rule the country militarily and economically with an iron hand, even though he recently turned ever the presidency to his brother, Hestor, through the mechanism of a so-called election. The Generalissimo's only official office at present is Commander-in-Chief of the Armed Forces. On his birthday, an impressive desconstrution of serial strating of targets a short distance off-shore was undertaken by approximately fifteen Dominisan Air Force fighters, apparently of the P-51 type. This show was intended to emphasise the country's military alertness. An obvious and successful attempt was made to impress the furniga delegations with the material improvements that have been brought about during the past several years in the fields of smitstism, health, education and other autorial benefits. There is increasing evidence that Trujille may take stronger measures in controlling foreign investment and industry within his country. This is of particular current concern to the American Embassy. The country has prospered and has become solvent under his regime. The laboring class, although not receiving wages much higher than formerly, are materially better off than before. The Republic is devicesly a police state, although the populace appears to here comparative freedom. In this regard, the U. S. Delegation was advised that all botel rooms probably were wired.

d. From the point of view of future operations of the Gammaphic Area in ONE, part contacts with E. 5. and furging officials in attendance were firsty remained, particularly with the Communing Officer of the Army Map Service, the Director of the British Colonial Serveys and the representative from

Sanitized - Approved For Release -CIA-RDP75-00662R000300150005-1 BECURITY INFORMATION

the Institute Geographique Matienale in Paris, who also is closely associated with mapping programs within the MATO framework. Potentially useful new contacts were established with the incoming Commenting Officers of the Aeronautical Chart and Information Center, APCS, and the Inter-American Geodetic Survey, as well as with the several other senior officials in attendance who were not previously known personally by the undersigned.
