For example, the following table shows the results of a regression analysis of the relationship between the number of hours worked per week and the number of children in the household. The results show that the number of children in the household is a significant determinant of the number of hours worked per week, with a positive coefficient of 0.15. This means that for every additional child in the household, the number of hours worked per week increases by 0.15 hours, holding all other factors constant.
