#### PREFACE

This Mission Coverage Index (MCI) furnishes a listing of intelligence targets covered by Mission 9040. Items in the listing are arranged (1) by country, (2) by WAC area within the country, and (3) by coordinates reading from south to north and from west to east. An explanation of column headings and photo reference data used in presenting the information is contained in the appendix.

For the convenience of the user, a subject index to the intelligence targets has been included following the listing. Targets in the subject index are listed (1) by category, (2) by country within each category, and (3) alphabetically by place name within each country.

The user of this MCI is cautioned that the scan of photography from Mission 9040 was accomplished in a relatively short time and often without the aid of precise analytical and mensural equipment commonly employed in detailed photographic analysis. Consequently, although the information presented herein is essentially accurate, future detailed analysis may somewhat alter portions of the information.

### SUMMARY

Mission 9040, accomplished during the period 28-31 July 1962, provided 31 photographic passes, mainly over the Sino-Soviet Bloc. Approximately 50 percent of the coverage is cloud free, but interpretation for much of the mission has been impaired by a camera-induced fogged condition.

The average scale of the photography at the center of the format ranges from approximately 1:435,000 at 70 degrees north to 1:352,500 at 40 degrees north for descending passes and 1:472,500 at 70 degrees north to 1:580,000 at 40 degrees north for ascending passes.

Installations of special interest identified or observed for the first time on Mission 9040 include Launch Complex G in an early stage of construction at Tyura Tam Missile Test Center; nine hardened MRBM/IRBM sites in various stages of construction along the western border of the USSR; an MRBM launch site at Lejas-ciems, USSR; IRBM Launch Site 3 under construction at Lebedin, USSR; 19 SA-2 SAM sites; two SAM Support Facilities; two SA-3 SAM sites in the Leningrad area; and a proton accelerator under construction 8 nm WSW of Serpukhov, USSR.

APPENDIX  
EXPLANATION OF COLUMN HEADINGS  
AND PHOTO REFERENCES

City, Installation -- This column contains the name of the city or town nearest the installation, followed by the name of the installation. If the name of the installation is not known, it is titled according to its function. The city and installation names are followed by a capsule description, where appropriate. Distances to installations from referenced cities are determined from the center of the cities.

Coordinates -- Coordinates for all installations are for the minute square in which the reference point is located. Where the subject installation covers a wide area, coordinates are given for the approximate center of the installation.

WAC -- This column provides the World Aeronautical Chart number for the area in which the subject installation lies.

Installation Numbers -- The Installation Numbers column is divided into two subcolumns. The first subcolumn lists, when known, the BE installation number assigned to the target. The second subcolumn lists the installation number assigned by NPIC. Installation numbers, when used to reference an item, should be prefixed by the appropriate WAC number, since installation numbers are repeated from WAC to WAC. For example, there is an NPIC target numbered 0235-1 and an NPIC target numbered 0236-1. In each instance, the NPIC installation number is 1, but the installations appear on different WACs.

NPIC/R-62/63

The photo reference provides the ascending and/or descending pass(es) and forward and/or aft frame(s) on which the target appears, and indicates conditions which affect interpretation of the target. The reference also provides Universal Reference Grid (X-Y) coordinates to aid in pinpointing the target on the photography. These grid coordinates follow the frame to which they apply.
