STATINTL

STATINTL

As a result of our conversation of January 14, I am taking the liberty of sending you the attached unsolicited proposal. You had indicated interest in the work we had already done and stated that you had an immediate need for MTF determinations using a simple technique and a small, portable item of equipment.

Some of our recent research has demonstrated a high degree of feasibility for the small, prototype model I showed you, and we feel that we can provide the equipment and technique necessary to get the job done.

If this proposal does not meet your approval entirely, we will be willing to discuss it with you and iron out any differences which may exist. In any case, we will be glad to have you pay us another visit for discussions on this, or similar problems of mutual interest.

STATINTL

Sincerely yours.
