NATIONAL BUREAU OF STANDARDS

REPORT OF CALIBRATION

on

2.2-Millimeter Stage Micrometer

Maker: Bausch & Lomb

NBS No. 5388

Submitted by

Photographic Technology Section
Division 212.13
National Bureau of Standards
Washington, D. C.

This stage micrometer has been compared with the standards of the United States and a calibration made of some of the subintervals. The results are as follows:

Length of the interval from the zero graduation to the 2.2-millimeter graduation at 20° Celsius: 2.204 millimeters.

Length of Subintervals at 20° Celsius

Interval (mm)	Length (mm)
0 to 1.0	1.003
2.0	2.004
2.2	2.204

It is estimated that these values for the lengths are not in error by more than 0.001 millimeter.

The scale graduations are not numbered, therefore, the zero is taken to be the graduation farthest to the left when the stage micrometer is held so that the trade mark can be read in the normal manner.

For the Director,

J. S. Beers

J. S. Beers
Acting Chief, Length Section
Metrology Division
