

HTA/6 Case

PSD/NPIC-19-64
23 April 1964

MEMORANDUM FOR: Chief, Plans and Development Staff, NPIC

ATTENTION: 

25X1A

SUBJECT: HTA 6 Film Processor Proposal

1. Upon reading this proposal several questions arise that we feel should be answered before going forward with this proposal.

A. There is no mention of capacity of chemical solutions tanks or of a chemical replenishment system. In a machine of this type shouldn't there be some method of replenishing chemicals?

B. We would appreciate further explanation of the drier system, no mention is made of drying temperatures, the proposal states that "no external blowers, filters or ducting to any outside source are required"; how does the contractor propose to dispose of the moisture-laden air? He states that the system will be "arranged so that a dehydrator may be used" though it is not included in this proposal. Is it possible that we will find at some later date that we do in fact need a dehydrator and thus generate a modification?

C. The overall size of the machine causes concern in P.S.D.. In its present configuration it would mean costly building modification which, should be avoided; we feel that with a replenishment system the size could be reduced.

D. We in P.S.D. also feel that since it has been a year since this proposal was written, some progress must have been achieved that would permit the contractor to build more into the machine for the price.
