ABSTRACT

This bibliography is a compilation of the literature on optical modulation, techniques, and equipment. Arrangement is alphabetical by author or corporate source. Where two or more entries have been originated by the same source the arrangement is by date. The references cover the period 1 January 1962 through July 1964. Co-Author, Corporate Source and Periodical, and Subject indexes follow the bibliographic entries.

INTRODUCTION

Technological advance of the past few years has shown a trend toward the use of optical frequencies for the performance of functions which are, at present, monopolized by longer wavelength equipment. This trend has come about through the development of the laser and its inherent characteristics of coherent, monochromatic light.

The laser as a light source has made rapid progress in some areas of its development such as power output, efficiency, and operating characteristics. In the areas of scanning, modulation, and receiving techniques, however, progress has been slower. The future application of laser as practical light sources will depend upon the advancement of those areas where progress has been slow.

This bibliography is a compilation of the literature on optical modulation, techniques, and equipment. It is intended as a working tool to guide interested scientists and engineers to the literature in their field of interest. Arrangement is alphabetical by author or corporate source. Where two or more entries have been originated by the same source the arrangement is by date. The references cover the period January 1962 through July 1964. Co-Author, Corporate Source and Periodical, and Subject indexes follow the bibliographic entries.

The readers attention is directed to two additional bibliographies which may be of interest. SID 64-26, "The Literature of Non-Permanent Displays and Display Materials" and SID 64-669, "Optical Scanning Methods and Techniques - A Bibliography" are currently available at the Technical Information Center.

BIBLIOGRAPHY

1. Adrianova, I.I.
AMPLITUDE AND PHASE CHARACTERISTICS OF AN INTERFERENCE
MODULATOR OF LIGHT. Optics and Spectroscopy, 9:260-262,
October 1960, 4 refs.

Describes the results of a theoretical and experimental study of
the modulation of light flux with an interference modulator.

2. Allen, S.J., K. Linden, B. DiBartolo, M. Mack, and R. Peccei
OPTICAL MASTER AND LIGHT MODULATION. Massachusetts
Institute of Technology, Laboratory for Insulation Research, Cambridge,
Massachusetts, Final Report for February 1962 - June 1963,
AFOSR-62-317, 8 pages.

AD 428 961

Discusses research activities in the following areas: (1) Coherent
emission from ions in glass hosts; (2) Optical harmonic generation in
ammonium dihydrogen phosphate; (3) rate equation analysis of laser
emission; (4) excited state spectroscopy and secondary absorption in
lasers; and (5) extension of laser techniques to submillimeter wave-
lengths and problems of generation, detection, and modulation in this
range.

3. Ammann, E.O., R. Targ, S.E. Harris, and J.B. Gaenzie
RESEARCH ON TECHNIQUES FOR LIGHT MODULATION DETECTION
Sylvania Electric Products, Inc., Mountain View, California, Interim
Engineering Report No. 6 for 1 September - 1 December 1963, 128
pages.

AD 428 980

Describes work on heterodyne demodulation and direct demodula-
tion of FM light.

4. Anderson, L.K.
MICROWAVE MODULATION OF LIGHT USING FERRIMAGNETIC
RESONANCE. Journal of Applied Physics, 34:1230-1231, April 1963,
9 refs.

Describes the operation of an optical modulator based upon the time-varying optical faraday rotation produced by the precessing magnetization in a magnetic material and presents experimental results for an X-band modulator using a thin disk of yttrium iron garnet.

5. Arm, M., L.B. Lambert, and B. Silverberg
ELECTRO-OPTICAL TRANSFER CHARACTERISTICS OF LIQUID DELAY-LINE LIGHT MODULATORS. Institute of Radio Engineers International Convention Record, Part 6, 10:79-89, 1962, 5 refs.

Utilizes the Debye-Sears effect in a water delay line to obtain spatial light modulation in real time.

6. Arushanov, G.S.
TWO-PLATE CRYSTAL LIGHT MODULATOR. National Aeronautics and Space Administration, Washington, D.C., Technical Translation F-101, August 1963, 13 pages.

Presents a theoretical analysis of the operation of a two-plate crystal light modulator investigating the optimum operating regime and the magnitudes of polarization voltages and of harmonic distortions resulting from them.

7. Ayres, R.J.
INTERFERENCE LIGHT MODULATION TECHNIQUES. North American Aviation, Inc., Space and Information Systems Division, Downey, California, Final Report for 1 April 1963 - 1 April 1964 on Contract AF 33(657)-10886, Report No. SID 64-703, 30 June 1964, 74 pages.

AD 441 858

Final report covering a 12-month program of theoretical and experimental effort leading to the development of light modulation recording techniques for (near) real-time display presenting a complete theoretical analysis of the interference-modulation technique.

8. Baker, A.S., Jr. and M. Tinkham
FAR-INFRARED INTERFERENCE - MODULATION SPECTROMETER. University of California, Berkeley, California, presented at the 1961 Monterey Meeting of the American Physical Society, 20-23 March 1961, U.S. Naval Postgraduate School, California.
9. Barnes, F.S.
ON THE MODULATION OF OPTICAL MASTERS. Proceedings of the Institute of Radio Engineers, 50:1686-1687, July 1962.

10. Basov, N.G., V.S. Zuev, and P.G. Kryukov
POWER INCREASE IN A PULSED RUBY LASER BY MEANS OF
MODULATION OF RESONATOR Q. Soviet Physics - JETP,
16(43):254-255, January 1963, 1 ref.

Describes a method for modulating the Q of the focus of a pair of configuring lenses situated between the end of a ruby laser and its external mirror.

11. Bedard, F.D.
MODULATION EFFECTS IN OPTICAL PUMPING. Laboratory for
Physical Sciences, College Park, Maryland, presented at the third
International Symposium on Quantum Electronics, Paris, France,
February 1963.

Discusses experiments in optical pumping with rubidium using large modulation indices with magnetic modulation.

12. Berry, R.G. and O.C. Jones
A SHUTTER FOR CONTINUOUS SQUARE WAVE MODULATION OF A
PENCIL OF LIGHT. Journal of Scientific Instruments, 41:92-94,
February 1964, 2 refs.

Discusses an electro-mechanical shutter of the open-shut type for producing a square wave modulation of a beam of light with a repetition frequency of 33 c/s.

13. Bevensee, R.M.
QUANTUM ELECTRODYNAMIC PREDICTION OF THE ENVELOPE
MODULATION OF MASER BEAMS. Proceedings of the Institute of
Electrical and Electronics Engineers, 51:215-216, January 1963,
4 refs.

Develop the equations for field and molecular energies as a function of time.

14. Bloembergen, N., P.S. Pershan, and L.R. Wilcox
MICROWAVE MODULATION OF LIGHT IN PARAMAGNETIC
CRYSTALS. Harvard University, Cruft Laboratory, Cambridge,
Massachusetts, Technical Report No. 325, 1 August 1960, 27 pages.

AD 243 873

Extends the considerations of Dehmelt and others on the modulation of light by radio frequency signals in atomic vapors to paramagnetic solids.

15. Bloembergen, N., P.S. Pershan, and L.R. Wilcox
MICROWAVE MODULATION OF LIGHT IN PARAMAGNETIC
CRYSTALS. Physical Review, 120:2014-2023, 15 December 1960,
47 refs.

Extends the work of Dehmelt and several others concerning
light modulation by radio-frequency signals in atomic vapors to
paramagnetic solids.

16. Bloembergen, N. and Y.R. Shen
THEORY OF LIGHT MODULATION BY THE DIAMAGNETIC FARADAY
EFFECT. Journal of the Optical Society of America, 54:551-552,
April 1964, 10 refs.

Experiments show that the amplitude of the Faraday rotation in
sodium vapor do not change as a function of the frequency of the applied
magnetic field.

17. Blumenthal, R.H.
DESIGN OF A MICROWAVE-FREQUENCY LIGHT MODULATOR.
Proceedings of the Institute of Radio Engineers, 50:452-456,
April 1962, 5 refs.

Describes a device which intensity modulates a light beam at
modulating frequencies in the microwave region.

18. Brabant, J.M., N.H. Koch, and H.R. Wright
INVESTIGATION OF OPTICAL FILTER MATERIALS AND
TECHNIQUES. Bissett-Berman Corporation, Santa Monica,
California, Report No. C39-22, 24 March 1964, 212 pages.

AD 348 617, Secret

Descriptors include: Optical filters, materials, light, absorp-
tion, germanium, silicon, light pulses, magneto-optic effect, optical
phenomena.

19. Brewer, R.G.
LIGHT MODULATION BY THE RAMAN EFFECT. Journal of Applied
Physics, 33:1606-1607, April 1962, 4 refs.
20. Brinkman, K.L.
STUDY ON OPTICAL COMMUNICATIONS FROM DEEP SPACE.
Hughes Aircraft Company, Culver City, California, Interim Progress
Report for 27 March - 31 May 1963, NASA CR-55812, May 1963,
77 pages, 14 refs.

Performs a systems-design analysis for the deep space vehicle-to-earth link. Chosen for analysis is a pulsed laser using PPM, and a continuous-wave laser using PCM with polarization modulation.

21. Brown, M.A.C.S. and E.G.S. Paige
ELECTRIC-FIELD-INDUCED MODULATION OF THE ABSORPTION DUE TO INTERBAND TRANSITIONS OF FREE HOLES IN GERMANIUM. Physical Review Letters, 7:84-86, 1 August 1961, 6 refs.
22. Buhrer, C.F.
POLARIZERS MODULATE LASER BEAM. Electronics, 35:21, 24 August 1962

Discusses the development of a single-sideband, suppressed-carrier, optical method for modulating laser beams, permitting tuning of the laser.

23. Buhrer, C.F., V.J. Fowler, and L.R. Bloom
SINGLE-SIDEBAND SUPPRESSED-CARRIER MODULATION OF COHERENT LIGHT BEAMS. Proceedings of the Institute of Radio Engineers, 50:1827-1828, August 1962, 1 ref.
24. Buhrer, C.F., D. Baird, and E.M. Conwell
OPTICAL FREQUENCY SHIFTING BY ELECTRO-OPTIC EFFECT. Applied Physics Letters, 1:46-49, October 1962, 2 refs.

Shows that light beam frequencies can be shifted with very little loss of intensity through the use of the transverse Pockels effect in a crystal of suitable symmetry.

25. Buhrer, C.F. and L.R. Bloom
SINGLE-SIDEBAND MODULATION AND RECEPTION OF LIGHT AT VHF. Proceedings of the Institute of Radio Engineers, 50:2492, December 1962, 3 refs.

Presents a VHF light modulator and describes an optical analog of the phasing method of single-sideband reception.

26. Buhrer, C.F.
OPTICAL MODULATION BY LIGHT BUNCHING. Proceedings of the Institute of Electrical and Electronics Engineers, 51:1151, August 1963, 4 refs.
27. Buhrer, C.F., L.R. Bloom, and D.H. Baird
ELECTRO-OPTIC LIGHT MODULATION WITH CUBIC CRYSTALS. Applied Optics, 2:839-846, August 1963, 9 refs.

Presents an analysis of the linear electro-optic effect in crystals of classes containing a threefold rotation axis showing that such crystals display a dual transverse electro-optic effect in which the magnitude of an electric field transverse to the light direction controls the electro-optic retardation and the direction of the field controls the orientation of the fast and slow polarization axes.

28. Burgess, J.Q. and W.S.C. Chang
OPTICAL FARADAY ROTATION AND MICROWAVE INTERACTIONS IN PARAMAGNETIC SALTS. Ohio State University, Department of Electrical Engineering, Columbus, Ohio, presented at the Spring Meeting of the Optical Society of America, 2-4 March 1961, Pittsburgh, Pennsylvania.

Presents an analysis and some preliminary results of the effect of paramagnetic absorption in optical Faraday rotation of light for use as a microwave and millimeter detector or as an optical polarization modulator (or amplitude modulation) for coherent radiations in maser and laser applications.

29. Burnett, G.D.
LIGHT MODULATION WITH PIEZOELECTRIC CRYSTALS. Electronic Industries, 21:91-95, November 1962.

Discusses light modulation of laser beams by the use of ammonium dihydrogen phosphate.

30. Chen, D.
MODULATION OF RUBY LASER OUTPUT BY ABSORPTION. Proceedings of the Institute of Electrical and Electronics Engineering, 51:227-228, January 1963, 4 refs.

Letter to the editor.

31. Chen, D.
MODULATION OF LASER OUTPUT BY MULTIPLE-REFLECTION KERR EFFECT ON THIN MAGNETIC FILMS. IN: Proceedings of the Symposium on Optical Masers, Polytechnic Press, Brooklyn, New York, 1963, pages 641-647, 7 refs.

Discusses amplitude modulation of laser output utilizing the magneto-optical Kerr effect in thin magnetic films.

32. Collins, R.J. and P. Kisliuk
FEEDBACK MODULATION WITH A RUBY OPTICAL MASER. Bell Telephone Laboratories, Inc., Wippany, New Jersey, presented at

the Chicago meeting of the American Physical Society, 24-25 November 1961, Chicago, Illinois.

33. Collins, R. J. and P. Kusliuk
CONTROL OF POPULATION INVERSION IN PULSED OPTICAL MASERS BY FEEDBACK MODULATION. Journal of Applied Physics, 6:2009-2011, June 1962, 5 refs.

Discusses the enhancement of the output power level in a pulsed ruby laser through the use of a technique in which the optical feedback is modulated by a shutter disk.

34. Cummins, H. Z. and N. Knable
SINGLE SIDEBAND MODULATION OF COHERENT LIGHT BY BRAGG REFLECTION ACOUSTICAL WAVES. Proceedings of the Institute of Electrical and Electronics Engineers, 51:1246, September 1963.

Presents an experimental investigation of optical phase modulation through the use of the Bragg method of light reflection by travelling ultrasonic waves in water.

35. Curnutte, B., Jr.
HIGH FREQUENCY MODULATION OF LIGHT. Kansas State University, Manhattan, Kansas, Final Report on Contract DA 49-186-502-ORD-433, July 1962, 23 pages.

AD 297 872

36. Daw, H. A.
INVESTIGATION OF LASER MODULATION BY MODIFYING THE INTERNAL REFLECTION BARRIER. Journal of the Optical Society of America, 53:915-917, August 1963, 6 refs.

Considers the problem of penetration through an internally reflecting barrier.

37. DeAngelis, X. and W. Niblack
ELECTRO-OPTIC INTERFERENCE FILTER LIGHT MODULATOR. Proceedings of the Institute of Electrical and Electronics Engineers, 51:1258, September 1963.

Describes a light modular utilizing a Fabry-Perot interference filter capable of being tuned through the use of an electro-optic material as the interference filter dielectric.

38. Dehmelt, H.G.
MODULATION OF A LIGHT BEAM BY PRECESSING ABSORBING ATOMS. Physical Review, 105:1924-1925, 15 March 1957, 6 refs.

Points out that monitoring techniques as applied to the orientation of atoms and molecules can be extended to faster notions such as precession in a magnetic field resulting in high-frequency modulation of a transmitted light beam.

39. DeMaria, A.J. and R. Gagosz
ULTRASONIC FEEDBACK MODULATION OF AN OPTICAL MASER OSCILLATOR. Proceedings of the Institute of Radio Engineers, 50:1522, June 1962, 4 refs.

Describes the modulation of the optical feedback in the Fabry-Perot cavity of an optical maser by the insertion of an ultrasonic cell between the reflecting end plates.

40. DeMaria, A.J. and G. Barnard
VISUAL OBSERVATION OF PIEZOELECTRIC MODES. Journal of Applied Physics, 34:2296-2297, August 1963, 10 refs.

Presents an experimental investigation of amplitude modulation of a laser beam by a quartz crystal.

41. DiDomenico, M., Jr. and L.K. Anderson
BROADBAND ELECTRO-OPTIC TRAVELING-WAVE LIGHT MODULATORS. Bell System Technical Journal, 42:2621-2678, November 1963, 43 refs.

Presents an analysis of a broadband traveling-wave electro-optic light modulator utilizing single crystals.

42. Dodd, J.N., G.W. Series, and M.J. Taylor
THE MODULATION OF LIGHT IN A DOUBLE RESONANCE EXPERIMENT. Proceedings of the Royal Society of London, Series A, 273:41-68, 23 April 1963, 21 refs.

Investigates modulation in resonance radiation when the fluorescing vapor is subjected to static and RF magnetic fields.

43. Eden, D.D.
SOLID-STATE TECHNIQUES FOR MODULATION AND DEMODULATION OF OPTICAL WAVES. Texas Instruments, Inc., Dallas, Texas, Quarterly Progress Report No. 1 for 1 May - 31 July 1962, 31 July 1962, 55 pages.

AD 286 540

Progress report in which work accomplished includes the construction and successful operation of an X-band modulator, construction and successful operation of a broad-bandwidth coaxial cavity-type modulator, and the modulation to 500 mcps of GaAs light-emitting diodes.

44. Eden, D.D.
SOLID-STATE TECHNIQUES FOR MODULATION AND DEMODULATION OF OPTICAL WAVES. Texas Instruments, Inc., Dallas, Texas, Quarterly Progress Report No. 2 for 1 August - 31 October 1962, Report No. U2-74000-2, 17 January 1963, 29 pages.

AD 401 086

Progress report in which a number of wide-band modulations (DC to 500 MC and higher) were constructed using KH_2PO_4 , Y-cut quartz is designed into a TEM traveling wave structure, and pure CuCl crystals are grown for specific application in wide-band TEM phase modulators.

45. Eden, D.D.
SOLID-STATE TECHNIQUES FOR MODULATION AND DEMODULATION OF OPTICAL WAVES. Texas Instruments, Inc., Dallas, Texas, Quarterly Report No. 3 for 1 November 1962 - 31 January 1963, 44 pages.

AD 402 927

Progress report on the completion of a quartz traveling wave phase modulator and the beginning of its tests. Growth continues on CuCl crystals for specific application to wide-band TEM phase modulators.

46. Eden, D.D.
SOLID-STATE TECHNIQUES FOR MODULATION AND DEMODULATION OF OPTICAL WAVES. Texas Instruments, Inc., Dallas, Texas, Report No. U4-74000-4, 30 April 1963, 30 pages.

AD 417 225

Progress report announcing the successful demonstration at high UHF modulation frequencies of an optical AM-FM converter using rutile and of a quartz traveling wave light modulator at high UHF modulation frequencies.

47. Eden, D.D. and K.M. Johnson
SOLID-STATE TECHNIQUES FOR MODULATION AND DEMODULATION
OF OPTICAL WAVES. Texas Instruments, Inc., Dallas, Texas,
Report No. U1-802400-1, 30 September 1963, 29 pages.

AD 427 740

Presents information on a number of new types of modulators which were developed. Test results are compared with the theoretically expected performance and compared with KDP in its conventional longitudinal mode of operation.

48. Eden, R.C. and P.D. Coleman
PROPOSAL FOR MICROWAVE MODULATION OF LIGHT EMPLOYING
THE SHIFT OF OPTICAL ABSORPTION EDGE WITH APPLIED
ELECTRIC FIELD. Proceedings of the Institute of Electrical and
Electronics Engineers, 51:1776-1777, December 1963, 6 refs.

Letter to the Editor..

49. Fork, R.L. and C.K. Patel
NEGATIVE TENSOR SUSCEPTIBILITY AND APPLICATION TO LIGHT
MODULATION. Bell Telephone Laboratories, Whippany, New Jersey,
Presented at the Winter Meeting of the American Physical Society,
27-29 December 1962, Stanford University, Stanford, California.

50. Fried, D.L., W.S. Read, and D.B. Pollock
AN INTERFEROMETRIC OPTICAL MODULATOR. Applied Optics,
3:697-701, June 1964, 1 ref.

Describes the theory and operation of a light modulator based upon the principle of the Twyman-Green interferometer.

51. Gaddy, O.L. and D.F. Holshouser
PHOTOMULTIPLICATION WITH MICROWAVE RESPONSE. University
of Illinois, Urbana, Illinois, Presented at the Third International
Symposium on Quantum Electronics, Paris, France, February 1963.

Discusses experiments in which light modulated at 3 Gc/s is detected with current gain of 10^5 .

52. Gilbreth, R.O. and H.W. Schmidt
QUASI-COHERENT ELECTRO-OPTICAL COMMUNICATIONS SYSTEM.
General Electric Company, Defense Electronics Division, Syracuse,
New York, Report No. R63RG012, 1 April 1963, 19 pages.

Describes the construction and testing of an electro-optical communications system in which the interaction medium is KDP. Currently under test is a larger system in which the modulation information is video.

53. Goldstein, B.S. and J.D. Welch
MICROWAVE MODULATION OF A GaAs INJECTION LASER.
Proceeding of the Institute of Electrical and Electronics Engineers,
52:715, June 1964, 2 refs.

Discusses the modulation of a GaAs laser at 2Gc.

54. Goodell, J.B.
PASSIVE OPTICAL-MODULATION TRANSFER MECHANISM.
Westinghouse Electric Corporation, Aerospace Division, Baltimore,
Maryland, Presented at the Spring Meeting of the Optical Society of
America, 1-3 April 1964, Washington, D.C.

55. Gordon, F.I. and J.D. Rigden
THE FABRY-PEROT ELECTRO-OPTIC MODULATOR. Bell System
Technical Journal, 42:155-179, January 1963, 8 refs.

Analyzes in detail the Fabry-Perot modulator, consisting of
Fabry-Perot etalon plates separated by an electro-optic material
such as KDP.

56. Gordon, E.I. and M.G. Cohen
ELECTRO-OPTIC GRATINGS FOR LIGHT DEFLECTION AND
MODULATION. Bell Telephone Laboratories, Whippany, New Jersey,
Presented at the Institute of Electrical and Electronical Engineers
Wescon Convention, 25-28 August 1964, Los Angeles, California.

57. Guidice, D.A. and W.L. Harmon
RING LASER TECHNIQUES FOR ANGULAR ROTATION SENSING.
Air Force Systems Command, Wright-Patterson Air Force Base,
Ohio, ASD-TDR-63-694, September 1963, 43 pages; 8 refs.

AD 425 706

Presents an experiment verifying the phenomena whereby the
resultant beat frequency of two waves optically heterodyned in a
photo-detector is directly proportional to the rotating rate of the ring.

58. Gurs, K. and A.G. Halske
BEATS AND MODULATION IN OPTICAL RUBY MASERS.
Forschung-Laboratorium, Munich, Germany, Presented at the Third

International Symposium on Quantum Electronics, Paris, France, February 1963.

59. Gurs, K. and R. Muller
INTERNAL MODULATION OF OPTICAL MASERS. In: Proceedings of the Symposium on Optical Masers, Polytechnic Press, Brooklyn, New York, 1963, pages 243-252, 9 refs.

Describes two methods of obtaining the electro-optic effect in KDP which requires only a fraction of the modulation power now required.

60. Hankin, R.B. and A.C. Todd
A HIGH RESOLUTION, MICROWAVE MODULATED OPTICAL DOPPLER RADAR. The Hallicrafters Company, Chicago, Illinois and Illinois Institute of Technology, Chicago, Illinois, Presented at the Institute of Electrical and Electronics Engineers International Convention, 23-26 March 1964, New York, New York.

Presents the theory of operation of an optical doppler radar based on the measurement of relative target velocity utilizing the information contained in the doppler shift of the envelope of a microwave modulated optical carrier.

61. Hannan, W.J., L.J. Nicastro, G. Clubine, and T.B. Penn
DOPPLER OPTICAL NAVIGATOR. Radio Corporation of America, Camden, New Jersey, Second Quarterly Progress Report for 6 September - 6 December 1963, 19 December 1963, 92 pages, 6 refs.

AD 426 411

Analysis of various filtering techniques shows that a subcarrier heterodyne receiver with a phase-locked oscillator filter provides the best performance for novel laser techniques for doppler optical navigation.

62. Harang, C.
INVESTIGATION OF THE STATE OF POLARIZATION OF THE RED AND GREEN O-LINES IN POLAR AURORAE. In: Studies in Auroral Spectroscopy, Oslo University, Blindern, Norway, 30 June 1963, pages 9-11, 1 ref.

Investigates the effect of linear polarization in draperies and arcs of the red and green O-lines in polar aurorae by means of a suitable chopping photometer in combination with a rotating polaroid disk.

63. Harned, B.W. and L. Leder
THEORETICAL AND EXPERIMENTAL INVESTIGATION OF
MODULATION INDUCING RETRODIRECTIVE OPTICAL SYSTEMS.
Philco Corporation, Scientific Laboratory, Blue Bell, Pennsylvania,
Monthly Contract Progress Report No. 2 for 21 June - 21 July 1963,
NASA CR-52155, 29 July 1963, 12 pages.

Progress report covering optical pumping research by passively cross-modulating two light beams.

64. Harned, B.W. and M.E. Lasser
THEORETICAL AND EXPERIMENTAL INVESTIGATION OF
MODULATION INDUCING RETRODIRECTIVE OPTICAL SYSTEMS.
Philco Corporation, Scientific Laboratory, Blue Bell, Pennsylvania,
Monthly Contract Progress Report No. 4 for 21 August - 21 September
1963, NASA CR-52859, 26 September 1963, 8 pages.

Progress report on optical pumping and the confirmation that microwave and low radio-frequency signals can disturb optical alignment.

65. Harned, B.W. and M.E. Lasser
THEORETICAL AND EXPERIMENTAL INVESTIGATION OF
MODULATION INDUCING RETRODIRECTIVE OPTICAL SYSTEMS.
Philco Corporation, Scientific Laboratory, Blue Bell, Pennsylvania,
Monthly Contract Progress Report No. 5 for 21 September - 21 October
1963, NASA CR-55076, 28 October 1963, 7 pages.

Demonstrates the cross modulation of radiation beams. The optical pumping model was incorporated into the newly constructed demonstration model.

66. Harned, B.W.
THEORETICAL AND EXPERIMENTAL INVESTIGATION OF
MODULATION INDUCING RETRODIRECTIVE OPTICAL SYSTEMS.
Philco Corporation, Scientific Laboratory, Blue Bell, Pennsylvania,
Monthly Progress Report No. 9 for 21 January - 21 February 1964,
NASA CR-56012, 9 March 1964, 11 pages.

Includes a theoretical discussion of a simple optical pumping scheme that predicts the observed (ω^{-1}) falloff in response to chopped light beams in cross modulation.

67. Harris, S.E., B.J. McMurty and A.E. Siegman
MODULATION AND DEMODULATION OF COHERENT AND
INCOHERENT LIGHT AT A MICROWAVE FREQUENCY. Stanford
Electronics Laboratory, Stanford, California, Report No. SEL-62-119,
September 1962, 7 pages, 4 refs.

AD 296 920

Describes research on the modulation and demodulation of
incoherent light from a mercury-arc lamp and coherent light from a
ruby laser at a modulation frequency of 2700 Mc.

68. Harris, S.E., B.J. McMurty, and A.E. Siegman
MODULATION AND DIRECT DEMODULATION OF COHERENT AND
INCOHERENT LIGHT AT A MICROWAVE FREQUENCY. Applied
Physics Letters, 1:37-39, October 1962, 4 refs.

Discusses experiments on the modulation and direct demodulation
of optical radiation, using a cavity-type KDP pockels cell and a
microwave detector in conjunction with coherent light from a pulsed
ruby laser and incoherent light from a mercury arc.

69. Harris, S.E.
FM-AM OPTICAL CONVERTER. Stanford Electronics Laboratory,
Stanford, California, Presented at the Third International Symposium
on Quantum Electronics, Paris, France, February 1963.

Proposes and experimentally demonstrates a simple and practical
device similar to a single-stage Lyot filter for the conversion of
microwave frequency-modulated light to microwave amplitude-
modulated light.

70. Hauser, S.M., L.S. Smith, D.G. Marlowe, and P.R. Yoder, Jr.
THE STRESSED-PLATE SHUTTER, A NEW MODERATE-SPEED
ELECTRO-OPTICAL MODULATOR. Applied Optics, 2:1175-1179,
November 1963, 11 refs.

Describes an electro-optical shutter system which functions by
virtue of uniform photoelastic birefringence induced mechanically by
piezoelectric means into a glass plate supported between suitably
oriented linear polarizers.

71. Henry, E.E.
ORTHOGONAL ULTRASONIC SIGNALS. University of Michigan,
Institute of Science and Technology, Ann Arbor, Michigan, Report No.
4563 61R, April 1964, 12 pages.

AD 438 036

Describes an ultrasonic light modulator utilizing two quartz crystals as the transducers, each with its own electronic driver. The crystals are mounted in two sides of the unit producing two orthogonal ultrasonic wavetrains with a common area of interaction. Water is used as a delay medium.

72. Holshouser, D.F., H. Von Foerster, and G.L. Clark
MICROWAVE MODULATION OF LIGHT USING THE KERR EFFECT.
Journal of the Optical Society of America, 51:1360-1365,
December 1961, 5 refs.

Describes the modulation of light at 3 and 6 kMc by applying a superimposed electro static and microwave field to a carbon-disulfide Kerr-cell incorporated within the high-electric-field region of a resonant cavity.

73. Holshouser, D.F.
RESEARCH ON MODULATING LIGHT AT MICROWAVE FREQUENCIES.
University of Illinois, Electrical Engineering Research Laboratory,
Urbana, Illinois, Interim Final Report for 1 February 1959 -
31 January 1962, AFOSR-2474, 1962, 15 pages, 9 refs.

Progress report on the microwave modulation of light and methods for detecting this modulation. Microwave Kerr cells exhibiting nearly complete modulation at 3 gcps are developed.

74. Holshouser, D.F. and R. Stanfield
MICROWAVE AND ELECTRO-OPTIC PROPERTIES OF LIQUIDS
EXHIBITING THE KERR EFFECT. University of Illinois, Urbana,
Illinois, Presented at the Third International Symposium on Quantum
Electronics, Paris, France, February 1963.

Discusses the results of a program for the measurement of the electrical and optical properties of liquids used in Kerr cell light modulators. Presents data and calculations permitting a comparison with solid-state electro-optical effects for light modulation at microwave frequencies.

75. Inaba, H. and A.E. Siegman
MICROWAVE PHOTOMIXING OF OPTICAL MASER OUTPUTS WITH
A P-I-N JUNCTION PHOTODIODE. Proceedings of the Institute of
Radio Engineers, 50:1823-1824, August 1962.

Describes the use of a p-i-n junction photodiode as a mixer in an optical superheterodyne system employing microwave modulated light.

76. Ito, M.
TRANSMITTER FOR COHERENT LIGHT COMMUNICATION SYSTEM. Nippon Electric Company, Ltd., Kawasaki, Japan, Presented at the Institute of Electrical and Electronics Engineers International Convention, 23-26 March 1964, New York, New York.

Discusses the design and performance of a dc excited helium-neon gas laser, a sensitive wide band modulator, alignment, and focusing procedures.

77. Jacobs, S.
OPTICAL HETERODYNE-KEY TO ADVANCED SPACE SIGNALING. Electronics, 36:29-31, 12 July 1963.

Presents a general survey of optical heterodyning methods.

78. Johnson, K.M.
SOLID STATE MODULATION AND DIRECT DEMODULATION OF GAS LASER LIGHT AT A MICROWAVE FREQUENCY. Proceedings of the Institute of Electrical and Electronics Engineers, 51:1368-1369, October 1963, 3 refs.

Presents an experimental investigation of the microwave modulation and direct demodulation of laser light through the use of a cavity-type KH_2PO_4 modulator and a Si photovoltaic diode demodulator.

79. Johnson, L.F. and D. Kahng
PIEZOELECTRIC OPTICAL-MASER MODULATOR. Journal of Applied Physics, 33:3440-3443, December 1962, 10 refs.

Describes an optical-maser modulator employing a transparent piezoelectric medium.

80. Kamal, A.K.
PROPOSED TECHNIQUE FOR THE MODULATION OF COHERENT LIGHT. Proceedings of the Institute of Radio Engineers, 49:1331, August 1961.

Proposes a technique for the modulation of coherent light output of a ruby laser utilizing the Stark effect in the ruby itself.

81. Kaminow, I. P.
MICROWAVE MODULATION OF THE ELECTRO-OPTIC EFFECT IN KH_2PO_4 . Physical Review Letters, 6:528-530, 15 May 1961, 9 refs.
82. Kaminow, I. P.
MICROWAVE MODULATION OF LIGHT BY THE ELECTRO-OPTIC EFFECT. In: Northeast Electronics Research and Engineering Meeting Record, 3:117, 1961, 5 refs.
83. Kaminow, I. P., R. Kompfner, and W. H. Louisell
IMPROVEMENTS IN LIGHT MODULATORS OF TRAVELING-WAVE TYPE. Institute of Radio Engineers Transactions on Microwave Theory and Techniques, MTT-10:311-313, September 1962, 5 refs.

Analyzes a scheme for the wide-band modulation of light whereby the power is continuously fed into the light-carrying guide to make up for the attenuation as the wave progresses down the guide.

84. Kaminow, I. P.
ELECTRO-OPTICAL LIGHT MODULATION. Bell Telephone Laboratories, Holmdel, New Jersey, presented at the Lasers and Applications Symposium, Ohio State University, November 1962.

Reviews some aspects of the design of microwave light modulators based on the electro-optic effect and discusses recent work on cavity-type and traveling-wave-type microwave structures. Includes information of the measurement on electro-optic materials.

85. Kaminow, I. P.
SPLITTING OF FABRY-PEROT RINGS BY MICROWAVE MODULATION OF LIGHT. Applied Physics Letters, 2:41-42, 15 January 1963, 6 refs.

Discusses an experiment in which the carrier frequency, provided by a He-Ne maser, operating continuously at 6328Å, is phase-modulated at 9.01 Gc by an electro-optic light modulator.

86. Kaminow, I. P. and J. Liu
PROPAGATION CHARACTERISTICS OF PARTIALLY LOADED TWO CONDUCT TRANSMISSION LINE FOR BROADBAND LIGHT MODULATION. Proceedings of the Institute of Electrical and Electronics Engineers, 51:132-136, January 1963, 5 refs.

Derives the characteristics of two-conductor transmission lines containing two dielectrics and applies the results of broad-band traveling-wave light modulators.

87. Kaminow, I. P.
TEMPERATURE DEPENDENCE OF THE COMPLEX DIELECTRIC CONSTANT IN KH_2PO_4 -TYPE CRYSTALS AND THE EFFICIENCY OF MICROWAVE MODULATORS. Bell Telephone Laboratories, Holmdel, New Jersey, Presented at the Third International Symposium on Quantum Electronics, Paris, France, February 1963.

Discusses the measurements of the temperature dependence of the complex dielectric constants of KH_2PO_4 and several isomorphs at 9.2 Gc.

88. Kaminow, I. P.
STRAIN EFFECTS IN ELECTRO-OPTIC LIGHT MODULATORS. Northeast Electronics Research and Engineering Meeting Record, 5:152, 1963.
89. Kaya, P.
PROPOSAL FOR MODULATING THE OUTPUT OF AN OPTICAL MASER. Proceedings of the Institute of Radio Engineers, 50:323, March 1962, 3 refs.

Letter to the editor.

90. Kibble, B. P. and G. W. Series
FURTHER STUDIES OF MODULATED LIGHT IN A DOUBLE RESONANCE EXPERIMENT. Proceedings of the Royal Society of London, Series A, 274:213-224, 23 July 1963, 6 refs.

Presents a discussion of an investigation, at low frequencies, of the modulation of fluorescent light which has already been found at higher frequencies in a double magnetic experiment.

91. Kiss, Z. J.
ZEEMAN TUNING AND INTERNAL MODULATION OF THE $\text{CAF}_2:\text{DY}^{2+}$ OPTICAL MASER. In: Proceedings of the Symposium on Optical Masers, Polytechnic Press, Brooklyn, New York, 1963, Pages 271-275, 3 refs.

Describes the achievement of internal modulation of an optical maser using both homogeneous and inhomogeneous small magnetic fields up to a band-width of 1/2 Mc.

92. Klockhaus, W.
LIGHT MODULATORS FOR WIDE FREQUENCY BANDS. Nachrichtentechnische Zeitschrift, 16:561-568, November 1963, 30 refs. (in German).

Surveys the principal methods for wide-band modulation of light waves with particular attention given to the control of emission processes in semiconductor lasers, and the controlled electrical, magnetic, and mechanical processes used to produce the proper variation of the optical characteristics of solid and gas lasers.

93. Kolk, A.J. and M. Orlovic
INCREASING THE KERR MAGNETO-OPTIC EFFECT IN THIN FILMS.
Journal of Applied Physics, 34:1060-1061, April 1963, 8 refs.

Describes observations of the magneto-optic rotations greater than the thick film longitudinal Kerr rotation at certain thicknesses of ferromagnetic films deposited on silver surfaces.

94. Kuckes, A.F.
A MONOCHROMATOR WAVELENGTH MODULATOR. Princeton University, Plasma Physics Laboratory, Princeton, New Jersey, Report No. MATT-162, January 1963, 9 pages.

Describes a technique for modulating the wavelength of a Monochromator and using this technique and a phase detection scheme the Doppler shift is easily obtained.

95. Lambert, L. and W. Konig
TWO-DIMENSIONAL FILTERING. Columbia University, Electronics Research Laboratories, New York, Technical Report No. P-2/179, 2 July 1962, 72 pages, 22 refs.

AD 334 210, Confidential

Descriptors Include: Optical Filters, Modulation, Delay Lines, Light Communication Systems.

96. La Tourrette, J. and S. Jacobs
HETERODYNE DETECTION IN OPTICAL COMMUNICATION.
Technical Research Group, Syosset, New York, Report No. TRG-168-TDR-1, 30 November 1962.

AD 269 362

Discusses the use of heterodyne detection in optical communication, demultiplexing of channels, demodulation of FM and AM, Doppler and displacement measurements, and stabilization of lasers.

97. La Tourrette, J.
THEORETICAL AND EXPERIMENTAL INVESTIGATION OF OPTICAL

HETERODYNING. Technical Research Group, Syosset, New York, STATINTL
Report No. 172TRI, 22 February 1963, 96 Pages, ASD-TDR-63-237.

AD 402 814

98. Leray, J. and P. Gramain
MODULATION DE L'ETAT DE POLARISATION DE LA LUMIERE
PAR UNE LAME ISOTROPE INCLINEE TOURNANTE—APPLICATION
A LA MESURE PHOTOELECTRIQUE DE L'EFFET MAXWELL.
Academie des Sciences des Comptes Rendus, 257:1624-1626,
28 October 1963 (In French).

Discusses the modulation of polarization of light by means of
rotating an inclined isotropic optical plate.

99. Lewis, H. R.
LASERS. Radio Corporation of America, Defense Electronic Products
Division, Camden, New Jersey, 1963, 31 pages.

Part three investigates wideband laser modulators that utilize
crystals exhibiting linear electro-optic effects. Presents information
on work being conducted on special microwave phototubes capable of
demodulating light that has been modulated at Gigacycle rates. Gives
some of the techniques and materials utilized in the systems.

100. Lindberg, E.
SOLID STATE BEAM CONTROLLED LIGHT MODULATOR. Motorola,
Inc., Chicago, Illinois, Final Report on Contract AF30(602)-2645,
RADC TDR-63-161, 21 June 1961, 43 pages.

AD 413 403

Describes the study and investigation into the feasibility of an
electron beam controlled solid-state light modulator.

101. Lindberg, E., J. Hatchett, and T. Cole
SOLID-STATE BEAM CONTROLLED LIGHT MODULATOR.
Motorola, Inc., Military Electronics Division, Chicago, Illinois,
Final Report on Contract AF30(602)-2645, RADC TDR-63-161,
21 June 1963, 51 pages.

102. Lindberg, L.
SOLID CRYSTAL MODULATES LIGHT BEAMS. Electronics,
36:58-61, 20 December 1963.

Describes the operation of a light beam modulator using
transparent birefringent KH_2PO_4 Crystal.

103. Litchman, W.S.
APPLICABILITY OF LASER TECHNIQUES. ITT Communication Systems, Inc., Paramus, New Jersey, Status Report on Contract AF19(628)-3358, Report No. ICS-64-TR-379, 13 March 1964, ESD—TDR-64-249, 80 pages.

AD 434 378

Presents laser communication techniques capable of being integrated into the AIRCOM System. Describes laser characteristics and problems related to light generation, modulation, and detection.

104. Lohmann, A.
THETA MODULATION IN OPTICS. International Business Machines Corporation, General Products Division Development Laboratory, San Jose, California, presented at the fall meeting of the Optical Society of America, 23-25 November 1963, Chicago, Illinois.

105. Lotsch, H.K.V.
A MODIFIED FABRY-PEROT INTERFEROMETER AS A DISCRIMINATION FILTER AND A MODULATOR FOR LONGITUDINAL MODES. California Institute of Technology, Quantum Electronics Laboratory, Pasadena, California, Scientific Report No. 2, 1 September 1962, 19 pages.

AD 269 948

Describes an unsymmetric modified interferometer.

106. McClung, F.J. and R.W. Hellwarth
CHARACTERISTICS OF GIANT OPTICAL PULSATIONS FROM RUBY. Proceedings of the Institute of Electrical and Electronics Engineers, 51:46-53, January 1963, 10 refs.

Describes a method of laser modulation which produces fast, intense, and controllable giant laser pulses by Q-modulation.

107. McGlees, H.G. and G.W. Saeger
SIMPLE, ECONOMICAL LASER DEMODULATION. Electronic Industries, 22:107-109, May 1963, 8 refs.

Presents a brief description of a simple method of laser microwave demodulation of an optical modulated signal.

108. McMurty, B.J. and S.E. Harris
MODULATION AND DIRECT DEMODULATION OF COHERENT AND INCOHERENT LIGHT AT A MICROWAVE FREQUENCY. Stanford

Electronics Laboratories, Stanford, California, Technical Report No. 176-3, September 1962.

Discusses the modulation and demodulation of the incoherent light from a mercury-arc lamp and the coherent light from a ruby laser at a modulation frequency of 2700 Mc.

109. McMurty, B. J., J. B. Gaenzle, and R. Targ
RESEARCH ON TECHNIQUES FOR LIGHT MODULATION DETECTION.
Sylvania Electric Products, Inc., Mountain View, California,
Interim Engineering Report No. 2 for 1 September — 1 December 1962,
47 pages, 16 refs.

AD 292 035

110. McQuaid, R. W.
THE POCKELS EFFECT OF HEXAMETHYLENETETRAMINE.
Applied Optics, 2:320-321, March 1963, 9 refs.

Letter to the editor.

111. McQuaid, R. W. and M. C. Watkins
LASER MODULATION WITH HEXAMETHYLENETETRAMINE.
Aircraft Armaments, Inc., Cockeysville, Maryland, presented at
the fall meeting of the Optical Society of America, 23-25 October 1963,
Chicago, Illinois.
112. McQuaid, R. W.
CUBIC PIEZOELECTRIC CRYSTALS FOR ELECTRO-OPTIC
MODULATION. In: Proceedings of the Institute of Electrical and
Electronics Engineers National Aerospace Electronics Conference, 1963,
pages 282-286.

Describes the investigation into finding new crystalline materials of crystal classes 43m and 23 that could require less power for operation and be easily grown as large single crystals.

113. McQuistan, R. B. and J. W. Schultz
INFRARED MODULATION BY FREE-CARRIER ABSORPTION.
Minneapolis-Honeywell, Research Center, Hopkins, Minnesota,
Presented at the Spring Meeting of the Optical Society of America,
25-27 March 1963, Jacksonville, Florida.

Presents experimental results relating to the electro-optical characteristics of free-carrier modulators and compares them with a theory for the modulation of infrared radiation.

114. Macek, W.C., R. Kroeger, and J.R. Schneider
MICROWAVE MODULATION OF LIGHT. Institute of Radio Engineers
International Convention Record, Part 3, 10:158-176, 1962, 8 refs.

Describes the advantages of utilizing light beams for space communications and navigation and reviews the light source requirements with emphasis on the application of the Pockels effect to an electro-optical microwave light beam modulator.

115. Moorhead, J.E., T. Falk, and V.C. Buonaiuto
INFRA-RED AND ELECTRO-OPTICS. SATELLITE SPECTROMETER,
PHASE II. Barnes Engineering Company, Stamford, Connecticut,
Report No. BEC-4696, 15 November 1962, 83 pages, 18 refs.

Presents a summary of design work completed on the Weather Bureau Satellite Spectrometer Program. At present a space-to-earth comparison through a chopper and earth mirror arrangement, or a calibrate blackbody (floating temperature) to space comparison may be made.

116. Niblack, W. and E. Wolf
POLARIZATION MODULATION AND DEMODULATION OF LIGHT.
Applied Optics, 3:277-279, February 1964.

Describes an optical communication system utilizing polarization modulation-demodulation of light enabling significant improvements in usable transmitted power or extended range, lessened susceptibility to interference from linearly polarized light, and ease of transmitter/receiver alignment over the performance of a comparable intensity-modulated optical communications systems.

117. Pankove, J.I. and J.E. Berkeyheiser
A LIGHT SOURCE MODULATED AT MICROWAVE FREQUENCIES.
Proceedings of the Institute of Radio Engineers, 50:1976-1977,
September 1962, 3 refs.

118. Pershan, P.S. and N. Bloembergen
MICROWAVE MODULATION OF LIGHT. In: Advances in Quantum
Electronics, Columbia University Press, 1961, pages 187-199.

119. Peters, C.J.
WIDEBAND COHERENT LIGHT MODULATOR. Northeast Electronics
Research and Engineering Meeting Record, 4:88-89, 1962, 4 refs.

Discusses the construction and performance of a continuous-duty coherent-light modulator exhibiting a bandwidth in kMc.

120. Peters, C.J.
GIGACYCLE BANDWIDTH COHERENT LIGHT TRAVELING-WAVE
PHASE MODULATOR. Proceedings of the Institute of Electrical and
Electronics Engineers, 51:147-153, January 1963.

Describes a continuous-duty, coherent-light phase modulator
exhibiting a bandwidth in the gigacycle range.

121. Porter, C.S.
TRANSPARENT FERROMAGNETIC LIGHT MODULATOR USING
YTTRIUM IRON GARNET. Journal of Applied Physics, 29:495-496,
March 1958, 6 refs.

Describes a method of preparation of yttrium iron garnet
crystals from Y_2O_3 and Fe_2O_3 , using PbO as a solvent, and the
application of Faraday rotation from them to the design of light
modulators of which three types are described.

122. Racette, G.
ABSORPTION EDGE MODULATOR UTILIZING A P-N JUNCTION.
Proceedings of the Institute of Electrical and Electronics Engineers,
52:716, June 1964, 10 refs.

Discusses the use of a back-biased p-n junction structure to
meet the large fields and low currents required for the observation of
the shift of the optical absorption edge of semiconductors to longer
wavelengths upon the application of an electric field to a semiconductor.

123. Radio Corporation of America, Defense Electronic Products Division
STUDY AND DEVELOPMENT OF A CALCULATING-LIGHT
MODULATOR. Camden, New Jersey, Semi-Annual Technical
Report No. 1 for 27 August - 31 December 1959.

AD 342 085, Secret

Descriptors include: Light Modulators, Integrators, Test
Methods, Transducers, Bandwidth, Propagation, Delay Lines, and
Attenuation.

124. Radio Corporation of America, Defense Electronic Products Division
STUDY AND DEVELOPMENT OF A CALCULATING LIGHT
MODULATOR. Camden, New Jersey, Semi-Annual Technical
Report No. 2 for 1 January - 30 June 1960

AD 342 377, Secret

Descriptors include: Light Modulators, Delay Lines, Measurement, and Specifications.

125. Radio Corporation of America, Defense Electronic Products Division
STUDY AND DEVELOPMENT OF A CALCULATING LIGHT
MODULATOR. Camden, New Jersey, Semi-Annual Technical
Report No. 3 for 1 July - 31 December 1960, Report No. IB1076-3,
15 January 1961.

AD 341 924, Secret

Descriptors Include: Light Transmission Modulators, Feasibility
Study, Refraction, Spectrum Analyzers, and Design.

126. Radio Corporation of America, Defense Electronic Products Division
STUDY AND DEVELOPMENT OF A CALCULATING LIGHT
MODULATOR. Camden, New Jersey, Semi-Annual Technical
Report No. 4 for 1 January - 30 June 1961, Report No. IB2025-55,
15 July 1961.

AD 341 564, Secret

Descriptors Include: Light Modulators, Anti-Missile Defense
Systems, Display Systems, Delay Lines, Feasibility Studies, Design,
and Transducers.

127. Radio Corporation of America, Missile and Surface Radar Division
ELECTRO-OPTICAL ATTITUDE MEASURING SYSTEM - A DESIGN
STUDY. Moorestown, New Jersey, Report No. ESD-TDR-63-624,
October 1963, 191 pages.

AD 428 002

Investigates a method of Electro-Optically determining the
attitude of a missile from lift-off to 50,000 feet. The determination
is made by lasers illuminating two missile-borne retroreflectors.
The reflected radiation is returned to the receivers where the beams
are separated and analyzed by a polarization sensitive system to
determine polarization states.

128. Read, W.S. and D.L. Fried
OPTICAL HETERODYNING WITH NONCRITICAL ANGULAR
ALIGNMENT. Proceedings of the Institute of Electrical and
Electronics Engineers, 51:1787 December 1963, 3 refs.

Discusses the development of a method of achieving optical heterodyne detection without the usual high degree of angular alignment.

129. Reich, A. and S.S. Verner
VOICE MODULATION OF A ELECTRO-ACOUSTICALLY DEFLECTED LIGHT BEAM. Proceedings of the Institute of Electrical and Electronics Engineers, 51:1661-1662, November 1963, 1 ref.

Letter to the Editor

130. Renton, C.A.
AMPLITUDE MODULATION OF LIGHT BY REVERSED BIASED P-N JUNCTIONS. Proceedings of the Institute of Electrical and Electronics Engineers, 52:93-94, January 1964, 3 refs.

Presents a method utilizing a reversed biased p-n junction to modulate the amplitude of a light beam being transmitted through the junction.

131. Rigrod, W.W. and I.P. Kaminow
WIDE-BAND MICROWAVE LIGHT MODULATION. Proceedings of the Institute of Electrical and Electronics Engineers, 51:137-140, January 1963, 10 refs.

Describes a method for obtaining light modulation of an extremely wideband by traveling-wave interaction in electro-optic or magnet-optic materials.

132. Rosenthal, J.E.
MODULATION OF COHERENT LIGHT. Presented at the 1961 Annual Meeting of the American Physical Society, 1-4 February 1961, New York, New York.

Discusses a light valve which uses carrier density modulation of light passing through an epitaxial semiconductor sheet.

133. Rottman, H.R.
A PRECISION CHOPPER DISK. Applied Optics, 2:1333-1334, December 1963.

Letter to the Editor.

134. Rugari, A.D.
IN-CAVITY LASER MODULATION STUDY. Rome Air Development Center, Griffiss Air Force Base, New York, Report No. TDR-64-129, May 1964, 25 pages.

AD 601 660

Presents an investigation of a laser modulation technique capable of providing a flat frequency response over the range of 30 cps to 30 mc/s with a modulation index of 0.5 or greater through the introduction of controllable losses to the laser cavity by alternate alignment and misalignment of the cavity mirrors.

135. Rugari, A.D. and P.E. Nordborg
LASER EXPERIMENTS INVOLVING IN-CAVITY MODULATION WITH ELECTRO-OPTIC CRYSTALS. Proceedings of the Institute of Electrical and Electronics Engineers, 52:852, July 1964, 2 refs.

Letter to the Editor.

136. Saito, S. and T. Kimura
MICROWAVE MODULATION OF RUBY LASER LIGHT USING DKP CRYSTAL. Japanese Journal of Applied Physics, 2:658-659, November 1963.

137. Schiel, E.J. and J.J. Bolmarcich
DIRECT MODULATION OF A HE-NE GAS LASER. Proceedings of the Institute of Electrical and Electronics Engineers, 51:940-941, June 1963.

Letter to the Editor.

138. Schmidt, B.M., J.M. Williams, and D. Williams
FARADAY-EFFECT MODULATION OF A LIGHT BEAM. Ohio State University, Columbus, Ohio, presented at the Fall Meeting of the Optical Society of America, 23-25 October 1963, Chicago, Illinois.

139. Schmidt, B.M., J.M. Williams, and D. Williams
MAGNETO-OPTIC MODULATION OF A LIGHT BEAM IN SODIUM VAPOR. Journal of the Optical Society of America, 54:454-459, April 1964, 10 refs.

Describes an experimental application of the Faraday effect in saturated sodium vapor, to produce amplitude modulation of a light beam near the D lines of sodium.

140. Seraphin, B.O. and D.G. McCauley
LOW-POWER LIGHT MODULATORS. Michelson Laboratory, China Lake, California, Presented at the Spring Meeting of the Optical Society of America, 25-27 March 1963, Jacksonville, Florida, 2 refs.

Presents two approaches which are applicable to low-power light modulation.

141. Seraphin, B.O. and D.A. Orton
FIELD-EFFECT LIGHT MODULATION IN GERMANIUM. Journal of Applied Physics, 34:1743-1748, June 1963, 13 refs.

Discusses the measurement of light modulation as a function of surface conditions.

142. Seraphin, B.O., D.G. McCauley, and L.G. La Marca
PIEZOELECTRIC LASER MODULATOR. In: Proceedings of the Symposium on Optical Masters, Polytechnic Press, Brooklyn, New York, 1963 pages 635-639, 8 refs.

Describes the performance of a Fabry-Perot light modulator in which the intensity of the interference pattern in reflection is modulated by piezoelectric change in thickness of the quartz spacer.

143. Sherman, S. and D.S. Bayley
SPECTRAL SUITABILITY, MODULATION, AND DETECTION TECHNIQUES IN COMMUNICATION WITH WAVELENGTHS BETWEEN 30 AND 10,000 ANGSTROMS, PART II. General Precision Laboratory, Inc., Pleasantville, New York, Report No. A24-4, April 1962, 109 pages, 12 refs.

AD 331 725, Secret

Descriptors include: Lasers, Light Communication Systems, Re-Entry Vehicles, Signal-To-Noise Ratio, Mirrors, and Lenses.

144. Shumate, M.S.
AN INTERFEROMETRIC MEASUREMENT OF INDEX OF REFRACTION. California Institute of Technology, Quantum Electronics Laboratory, Pasadena, California, Report No. SR5, 13 March 1964, 77 pages, AFCRL-64-175, 18 refs.

AD 437 768

Describes a method for measuring the index of refraction of solid optical materials utilizing a two-beam interferometer for determining the optical path length through a flat plate by tipping away from normal incidence through a measured angle.

145. Siegman, A.E., B.J. McMurty, and S.E. Harris
MICROWAVE MODULATION AND DEMODULATION OF LIGHT.
Stanford Electronics Laboratory, Stanford, California, Report No.
SEL-62-079, July 1962, 16 pages, 21 refs.

AD 291 428

Describes methods for modulating and demodulating coherent light signals at microwave modulation frequencies.

146. Siegman, A.E., B.J. McMurtry, and S.E. Harris
MICROWAVE MODULATION AND DEMODULATION OF LIGHT.
In: Proceedings of the National Aerospace Electronics Conference,
1962, pages 384-389, 16 refs.

Presents a summary of the various methods for modulating and demodulating coherent light signals at microwave modulation frequencies.

147. Siegman, A.E., S.E. Harris, and B.J. McMurty
OPTICAL HETERODYNING AND OPTICAL DEMODULATION AT
MICROWAVE FREQUENCIES. In: Proceedings of the Symposium
on Optical Masers, Polytechnic Press, Brooklyn, New York, 1963,
pages 511-527, 25 refs.

Discusses results of experiments in progress on optical heterodyne reception and optical demodulation, with emphasis on microwave modulation frequencies and microwave bandwidths.

148. Singer, J.R. and S. Wang
THE EMISSION, PULSE-LEVEL INVERSION, AND MODULATION
OF OPTICAL MASERS. In: Advances in Quantum Electronics,
Columbia University Press, 1961, pages 299-307.

149. Skinner, J.G., J.E. Geusic, and J.A. Koningstein
OPTICAL MASER RESEARCH. Bell Telephone Laboratories, Inc.,
Murray Hill, New Jersey, Quarterly Report No. 4 for 15 April -
15 July 1962 on Contract DA-36-039-SC-87340, 15 July 1962,
17 pages, 7 refs.

AD 285 947

Discusses work on a mode selective interferometer for the purpose of obtaining optical oscillators of large diameter which have diffraction-limited beams. Includes experimental results on a pulsed ruby optical oscillator using this interferometer.

150. Sobottka, S. E.
APPLIED RESEARCH ON TECHNIQUES FOR LIGHT MODULATION
DETECTION. Watkins-Johnson Company, Palo Alto, California,
Interim Engineering Report No. 3 for 1 January - 31 March 1963,
Report No. W-J 63-610R12, 18 pages, 2 refs.
- AD 404 632
151. Sobottka, S. E.
APPLIED RESEARCH ON TECHNIQUES FOR LIGHT MODULATION
DETECTION —ADDENDUM. Watkins - Johnson Company, Palo Alto,
California, Interim Engineering Report No. 3 for 1 January -
31 March 1963, Report No. W-J 63-610R12-1, 13 pages, 2 refs.
152. Sterzer, F.
PUSH-PULL OPTICAL MODULATORS AND DEMODULATORS.
Applied Optics, 2:1197-1198 November 1963, 3 refs.

Describes methods for doubling the output of push-pull optical
amplitude modulators, and demodulators for polarization modulated
beams.

153. Sterzer, F., D. Blattner, and S. Minitier
CUPROUS CHLORIDE LIGHT MODULATORS. Journal of the Optical
Society of America, 54:62-68, January 1964, 13 refs.

Extends the theory of the linear electro-optic effect in cubic
crystals beyond the treatment of Pockels and Schramm with emphasis
on the implications of their use in optical modulators.

154. Stitch, M. L. and W. W. Buchman
CONTINUOUS TRAIN LASER DEVICES. Hughes Aircraft Company,
Culver City, California, Semi-Annual Technical Summary Report
for 1 September 1961 - 31 March 1962, April 1962, 91 pages.

AD 341 436, Confidential

Descriptors include: Lasers, Pulse Modulation, Interferometers,
Refractive Index, Modulators, Polarization.

155. Stone, S. M.
A MICROWAVE ELECTRO-OPTIC MODULATOR WHICH OVERCOMES
TRANSIT TIME LIMITATION. Proceedings of the Institute of
Electrical and Electronics Engineers, 52:409-410, April 1964, 2 refs.

Letter to the Editor.

156. Takasaki, H., M. Isobe, T. Masaki, A. Konda, T. Agatsuma, and Y. Watanabe
AN AUTOMATIC RETARDATION METER FOR AUTOMATIC POLARIMETRY BY MEANS OF AN ADP POLARIZATION MODULATOR. Applied Optics, 3:345-350, March 1964, 21 refs.

Describes the construction of a new automatic retardation meter with an ADP polarization modulator and reports some of the results obtained.

157. Takasaki, H., N. Okazaki, and K. Kida
AN AUTOMATIC POLARIMETER. II. AUTOMATIC POLARIMETRY BY MEANS OF AN ADP POLARIZATION MODULATOR. Applied Optics, 3:833-837, July 1964, 11 refs.

Describes a polarimeter using an ADP Kerr cell in place of the Faraday cell.

158. Targ, R.
OPTICAL HETERODYNE DETECTION OF MICROWAVE-MODULATED LIGHT. Proceedings of the Institute of Electrical and Electronics Engineers, 52:303-304, March 1964, 9 refs.

Describes the demodulation of microwave-modulated light by optical heterodyne techniques.

159. Technical Research Group, Inc.
ANALYSES OF LASER MODULATION TECHNIQUES. Syosset, New York, Report No. ASD-TDR-62-9, June 1962.

160. Thiess, G.H.
METHOD FOR DETECTING MICROWAVE MODULATED LIGHT. Proceedings of the Institute of Electrical and Electronics Engineers, 51:950, June 1963, 2 refs.

Describes an experimental arrangement for detecting microwave-modulated light through the use of an optical heterodyne employing relatively slow photodetectors.

161. Thurston, G.B.
TRANSMISSION OF POLARIZED LIGHT THROUGH A CONSTANT AND A TIME-VARYING PAIR OF BIREFRINGENT PLATES. Applied Optics, 3:755-759, June 1964, 12 refs.

Presents a theoretical analyses of the transmission of monochromatic light through a plane polarizer, two birefringent plates, and a plane analyzer.

162. Ujhelyi, G.K. and S.T. Ribeiro
AN ELECTRO-OPTICAL LIGHT INTENSITY MODULATOR. Proceedings of the Institute of Electrical and Electronics Engineers, 52:845, July 1964, 4 refs.

Describes a method for the modulation of the intensity of a light beam through the use of controlled partial reflections at a glass-nitrobenzene boundary surface.

163. Van der Tweel, L.H.
EEG WITH MODULATED LIGHT. Amsterdam University, Amsterdam, The Netherlands, 5 October 1963.

AD 408 411

Descriptors include: Light, Modulation, Stimulation, Eye, Electroencephalography.

164. Ward, W.E.
MIROS PROGRESS LETTER NO. 5 (20 SEPTEMBER TO 20 OCTOBER 1963). Westinghouse Electric Corporation, Aerospace Division, Baltimore, Maryland, NASA CR-55087, 13 pages.

Presents an analysis of the F-center modulation transfer scheme with the essential parts included in the report as: (1) Color centers and optical modulation; (2) Production of colored crystals; (3) Characteristics of colored crystals; and (4) Modulation transfer with colored center crystals.

165. Ward, W.E.
MIROS, OPTICAL SYSTEM STUDY. Westinghouse Electric Corporation, Aerospace Division, Baltimore, Maryland, Monthly Progress Report No. 7 for 20 November - 20 December 1963, NASA CR-55250, 6 pages.

Progress report wherein the first modulation scheme, the Mercury Cell, is successfully operated.

166. Westinghouse Electric Corporation, Aerospace Division
OPTICAL SYSTEMS STUDY. Baltimore, Maryland, Monthly Progress Report No. 10 for 20 February - 20 March 1964, NASA CR-53564, 30 March 1964, 6 pages.

The mercury-cell modulation transfer-scheme experiment was completed. Some of the experimental results are included for comparison with theory. Empirical and theoretical equations, describing the response of the cell are in close agreement.

167. White, R.M. and C.E. Enderby
ELECTRO-OPTICAL MODULATORS EMPLOYING INTERMITTENT INTERACTION. Proceedings of the Institute of Electrical and Electronics Engineers, 51:214, January 1963, 2 refs.

Describes a family of microwave circuit structures which permit the application of the Pockels effect and traveling-wave interaction to the wide-band modulation of light.

168. Wieder, H.H. and D.A. Collins
FARADAY ROTATION IN FENI FILMS. Applied Optics, 2:411-420, April 1963, 20 refs.

Determines the rotation of the plane of polarization as a function of the quasi-static magnetization reversal process related to the angle of incidence and azimuth of the transmitted plane polarized white light in films of a 35% nickel in iron alloy.

169. Williams, R.L.
HIGH-FREQUENCY LIGHT MODULATION. Journal of Scientific Instruments, 37:205-208, June 1960, 7 refs.

Describes a high frequency light modulator utilizing a magnetically driven rotor suspended by a magnetic field in a vacuum chamber.

170. Wohlers, M.R.
SOME OPTICAL MODULATION AND DEMODULATION TECHNIQUES. Grumman Aircraft Engineering Corporation, Research Department, Bethpage, New York, Report No. RN-166, August 1963, 25 pages, 4 refs.

Discusses the use of electro-optic crystals for modulation; describes techniques which have been proposed, and proposes or re-evaluates additional schemes which appear to be promising.

171. Yariv, A.
ELECTRO-OPTIC FREQUENCY MODULATION IN OPTICAL RESONATORS. Proceedings of the Institute of Electrical and Electronics Engineers, 52:719-720, June 1964, 8 refs.

STATINTL

Discusses the possibility of using the electro-optic effect for a new class of applications based upon a control of the internal feedback conditions of an optical resonator thus affording an electro-mechanical or magneto-mechanical means for resonator tuning.

PHASE MODULATORS	44, 45
PHOTODIODES, P-I-N JUNCTION	75
PHOTOMETERS, CHOPPING	62
PHOTOMIXING, MICROWAVE	75
PHOTOTUBES, MICROWAVE	99
PIEZOELECTRIC CRYSTALS	29, 112
PIEZOELECTRIC, MODULATORS	79, 142
POCKELS EFFECT	24, 27, 59, 82, 84, 110, 114, 167
POLARIMETRY, AUTOMATIC	156, 157
POLARIZATION —STATE	62, 127
POLARIZATION DEMODULATION	116
POLARIZATION MODULATION	20, 22, 98, 116
POLARIZATION MODULATORS	28, 156, 157

POLARIZATION PLANES —ROTATION	168
POLARIZATION VOLTAGES —MAGNITUDES	6
POPULATION INVERSION —CONTROL	33
POTASSIUM DIHYDROGEN PHOSPHATE	44, 47, 52, 68, 81, 87, 102
PUMPING, OPTICAL	11, 63-66
PUSH-PULL DEMODULATORS	152
PUSH-PULL MODULATORS	152
Q-MODULATION	106
QUARTZ, Y-CUT	44
QUARTZ CRYSTALS	40
RADAR, OPTICAL DOPPLER	60
RADIATION, RESONANCE	42
RAMAN EFFECT MODULATION	19
REFLECTION BARRIERS, INTERNAL —MODIFICATION	36
RESONANCE, FERRIMAGNETIC	4
RESONANCE RADIATION —MODULATION	42
RESONATORS —MODULATORS	10, 171
RINGS, FABRY-PEROT	85
ROTATION SENSING, ANGULAR	57

		STATINTL
ROTATIONS, MAGNETO-OPTICAL	93	
SALTS, PARAMAGNETIC	28	
SHUTTERS	33	
SHUTTERS, ELECTRO-MECHANICAL	12	
SHUTTERS, ELECTRO-OPTICAL	70	
SINGLE CRYSTALS	41	
SINGLE-SIDEBAND MODULATION	23, 25, 34	
SODIUM VAPOR	139	
SOLID CRYSTALS	102	
SOLID-STATE MODULATION	78	
SOLID-STATE MODULATORS	100, 101	
SPATIAL MODULATION	5	
SPECTROMETERS, INFRARED	8	
SQUARE WAVE MODULATION	12	
STARK EFFECT	80	
SUPPRESSED-CARRIER MODULATION	23	
THETA MODULATION	104	
THIN FILMS	31, 93	
TRANSFER MECHANISMS, PASSIVE	54	
TRANSMISSION LINES, TWO-CONDUCTOR	86	
TRAVELING-WAVE INTERACTION	131, 167	
TRAVELING-WAVE MODULATORS	41, 45, 46, 83, 86, 120	
TUNING, ZEEMAN	91	

TWO-BEAM INTERFEROMETERS	144
TWO-CONDUCTOR TRANSMISSION LINES	86
TWO-DIMENSIONAL FILTERING	95
TWYMAN-GREEN INTERFEROMETERS	50
ULTRASONIC MODULATION	39
ULTRASONIC MODULATORS	71
VALVES, LIGHT	132
VHF MODULATORS	25
VOICE MODULATION	129
VOLTAGES, POLARIZATION	6
WIDE-BAND MODULATION	83, 92, 131, 167
WIDE-BAND MODULATORS	44, 76, 99, 119
X-BAND MODULATORS	4, 43
Y-CUT QUARTZ	44
YTTRIUM IRON GARNET CRYSTALS	4, 121
ZEEMAN TUNING	91
