GUIDED MISSILE AND ASTROLOGY INTELLIGENCE COMMITTEE

1 February 1963

MEMORANDUM FOR: Holders of GMAIC-Deployment Working Group Report,  
 Soviet Surface-to-Surface Missile Deployment  
 (Control No. [redacted] dated 1 January 1962)

SUBJECT: Listings of GMAIC Evaluations on Soviet Surface-to-Surface Missile Deployment Locations (Fifth Revision)

1. This memorandum and the attached tables supersede those published on 1 December 1962 and disseminated under control number [redacted] (Fourth Revision). The report dated 1 December 1962 should be destroyed in accordance with the existing instructions for handling [redacted] material.

2. [redacted] revealed continued construction activity at a few of the seventeen confirmed ICBM complexes and newly identified sites have been observed under construction at Kostroma and Novosibirsk.

3. In the report dated 1 December 1962, ICBM site configurations were categorized to reflect the major differences in site signature. In review, ICBM site configurations are as follows:

TYPE I - First generation soft site with a single rail-served pad similar to Launch Complex A or B, Tyura Tam. To date, this type has only been observed at Plesetsk.

TYPE II - Second generation soft site with two road-served pads similar to Launch Complex C, Tyura Tam. This type was first observed at Yurya and subsequently at 11 other locations. There are two basic configurations of this type.

TYPE III - A hardened ICBM launch site observed at Launch Complex D, Tyura Tam and eight confirmed ICBM complexes. Each site consists of two launchers (probably silo type) and a control bunker. The degree of hardening cannot be determined from available evidence. The excavations during construction are about 200 feet wide and 500 feet long. An accurate measurement of depth has not been determined from photography.

- 1/ The USAF member of GMAIC believes that there are three configurations of this type. He asserts that the TYPE IV site described below is but another modification of the TYPE II site. The NSA member believes that all soft, road-served ICBM sites should be grouped as TYPE II until the missile system involved has been determined.

DECLASS REVIEW by NIMA/DOD

A 0000417

25X1

TYPE IV - A soft configuration consisting of two road-served launch pads. This configuration was first observed at TYUMEN and subsequently at three other confirmed ICBM complexes. It differs from TYPE II sites as follows: (1) the pad separation is between 800 and 870 feet instead of 930 feet; (2) the ready building is 820 feet from the pad and is smaller (115 x 130 feet); and (3) there is a "plus sign" pattern to the rear of the pad area at most of the sites under construction the function of which has not been determined.

Line drawings of the four ICBM site configurations described above have been included in the 1 October 1962 revision to the GMAIC-DWG Report, Soviet Surface-to-Surface Missile Deployment.

4. A total of 136 ICBM launchers have been identified to date at deployed complexes. Of this total, 80-90 are believed to be operational.

5. A total of 139 soft MRBM/IRBM sites (556 launch pads) have been identified on [redacted]. This total includes one probable site at SMORGON and one possible site at LESEDIN. Twenty-six hardened MRBM/IRBM sites (52 launchers) have been identified including two possible sites at SHESTOVO and one probable site at SARY OZEK.

6. While the vast majority of MRBM/IRBM sites are deployed in pairs, a few exceptions have been noted in our continuing analysis of deployment concepts. A few complexes have been observed with three soft sites, some with two soft sites plus one hardened site and there are still a few having only one soft site. Table 3 has been revised in this report to include coordinates, B.E. numbers, plus TDI names and to categorize the different MRBM/IRBM site configurations as follows:

TYPE I - MRBM sites consisting of four round, soft launch pads and support facilities.

TYPE II - MRBM sites consisting of four elongated, soft launch pads and support facilities.

TYPE III - IRBM sites consisting of four elongated, widely separated, soft launch pads and support facilities.

TYPE IV - Hardened MRBM/IRBM launch sites consisting of two silo-type launchers and support facilities.

Line drawing of two variations of the TYPE I sites and one of a typical TYPE IV site were included in the 1 October 1962 revision to the GMAIC-DWG Report, Soviet Surface-to-Surface Missile Deployment.

7. It should be noted that all suspect locations are subject to continuous review. When a suspect location has sufficient evidence to warrant an assessment of possible or higher, it will be included in the GMAIC-DWG Report, Soviet Surface-to-Surface Missile Deployment [redacted] dated 1 January 1962. When a location has been evaluated as negative, by the working group, all evidence including [redacted] photography will continue to be reviewed for deception, new construction, and unrecognized configurations. The evaluations assigned are

based on the latest data and are subject to change as new evidence is made available. Accordingly, these listings will be revised periodically to reflect additions and changes in evaluations.

8. Although some of the locations listed in Table 4 may have some functional relationship to the Soviet missile program, the assessments are limited to launching facilities. Only major differences in assessment are indicated in footnotes on the bottom of the pages.

1/ Referred to as Ugolnyy in some documents. Since Beringovskiy was formerly known as Ugolnyy, the DWG has selected Ugolnyy Kopi as the correct place name for this MRBM/IRBM site.

2/ Space tracking facility.
