PREFACE

This report, formerly published bimonthly by the GMAIC Deployment Working Group (DWG) in mimeograph form, has been expanded to include additional data. It will continue to be published bimonthly in this new format.

Dissemination of the report was previously limited to holders of the DWG report, Soviet Surface-to-Surface Missile Deployment. Because the information contained herein is both supplemental and self-sustaining, distribution will no longer be limited to holders of the above report.

The current format provides a comprehensive, ready reference listing of all ICBM, IRBM, and MRBM deployment locations, types of site configurations, photographic references, estimated construction and operational status, and other evaluations of the DWG. Additional data may be added to future revisions.

INTRODUCTION

This report is the seventh revision of Evaluations of Soviet Surface-to-Surface Missile Deployment prepared by the Deployment Working Group of the Guided Missiles and Astronautics Intelligence Committee. The sixth revision, dated 1 April 1963 and disseminated under control number [redacted] should be destroyed in accordance with existing instructions for handling [redacted] material.

[redacted] has provided additional information on the construction timing and pace of the Soviet missile deployment program which is reflected in the estimates and operational status shown in Tables 2 and 3. A new ICBM complex with one hardened launch site has been identified near Olovyanaya in the Soviet Far East, bringing the total number of deployed complexes to 18. A total of 76 ICBM sites (150 launchers) has been identified to date at these 18 deployed complexes. Of this total, about 108 are considered to be operational. See Figure 1 for locations of deployed ICBM complexes. Four basic ICBM launch site configurations (see Figure 2) have been identified and are characterized as follows:

Type I - A soft site with a rail-served pad similar to Launch Complex A or B at Tyura Tam. To date, this type has been observed only at Plesetsk.

Type II - A soft site with two road-served pads similar to the original Launch Complex C at Tyura Tam. This type was first observed at Yurya and subsequently at 11 other locations. There are two basic modes of this type.*

*The USAF, DIA, and NSA members of GMAIC believe that there are three configurations of this type, and all have similar, common identifying characteristics. They assert that the Type IV site listed above is the third mode of the Type II soft, road-served site.

Type III - A hardened site observed at Launch Complex D, Tyura Tam, and at ten confirmed ICBM complexes. It is more likely that this type of site contains three launch silos than the two previously reported. Neither the degree of hardening nor the depth of the silos can be determined from available photography (Figure 3).**

Type IV - A soft site consisting of two road-served launch pads. This type was first observed at Tyumen and subsequently at three other confirmed ICBM complexes. It differs from Type II sites as follows: (1) the pad separation is between 800 and 870 feet instead of 980 feet; (2) the drive-through ready building is smaller (130 by 115 feet) and is located within the loop road pattern; (3) there is a prominent "plus" configuration located at the rear or side of the launch site at most of the sites under construction; its purpose has not been determined; small buildings are located on three legs of the "plus" at some of the sites; and (4) the four buildings located along the center road between pads at Type II sites are not apparent at these sites.

Good-quality photography reveals that deployed Type III ICBM sites and Complex D at Tyura Tam contain three silos. From photography it is judged that two silos are in fact launch silos but the function of the third silo cannot be positively determined.

[redacted] evidence reveals that a launching exercise at Tyura Tam on [redacted] involved an attempt to launch three missiles within a period of 9 minutes and 56 seconds. The first and third missiles were successfully launched while the second launching was either canceled or the missile failed early in flight.

Approved For Release 2003/09/26 : CIA-RDP78T04757A000300010006-0

25X1

An identical practice countdown on [] confirms a Soviet intent to launch three missiles in 9 minutes and 56 seconds. While the missiles could have been launched from more than one Tyura Tam launch area, we believe that the exercise was probably designed to test an operational mode rather than the mere ability to launch three missiles within 10-minute period, and that an attempt was made to launch all three missiles from the same site. We believe that it is more likely that this exercise was conducted from the prototype Type III site at Area D1 than from the soft pads at Complex C, or the uncompleted hardened facility at launch Complex F.

Eight new launch sites (16 launchers) were identified in []. They are located at the following complexes:

[] 25X1

DROVYANAYA

Launch Site C	Type II (Mod ?)
Launch Site D	Type II (Mod ?)

OLOVYANNAYA

Launch Site A	Type III
---------------	----------

YEDROVO 1/

Launch Site E	Type III
Launch Site F	Type II (Mod ?)
Launch Site G	Type II (Mod ?)

VERKHNYAYA SALDA

Launch Site H	Type II (Mod ?)
Launch Site I	Type II (Mod ?)

1/ (NOTE: Launch Site C, Yedrovo, has been re-assembled at a Type III site as a result of []) 25X1

25X1

[] is the location of an ICBM complex which includes 4 completed launch sites; two are hardened Type III sites, and two are soft Type II sites. This is the first known flight between Tyura Tam and the Yedrovo area and suggests the involvement of personnel stationed at the Yedrovo ICBM complex with the unusual launching exercise.

Therefore, considering all evidence, we conclude that a Type III launch site more likely contains 3 launch silos than the two previously reported.*

Of the eight new sites identified, six are Type II sites of an undetermined mode. A preliminary analysis indicates that their configuration resembles a combination of C2 and C3 at Tyura Tam. Until a detailed photographic analysis is completed, the six launch sites will be listed as Type II sites of an undetermined mode.

25X1

*The Navy member does not concur in the level of confidence expressed in the conclusion that the firings on [] were from Area D1 and were designed to test an operational mode. The Navy member believes it equally possible that these firings involved more than one launch area at Tyura Tam. The final analysis of evidence on the [] firings may further support this view. The photographic evidence reveals a number of features which are inconsistent with a conclusion that these sites contain three launch silos. Analysis to date indicates the third silo at these sites is different from the other two and may have a function other than launch. Therefore, the Navy member reserves to the wording of the above three paragraphs and concludes that it is just as likely the Type III ICBM sites contain only two launch silos.

25X1

A preliminary analysis indicates that Omsk Launch Site A, a hardened site, is different from hardened Type III sites and may be related to Launch Area F at Tyura Tam. Pending receipt of further evidence we will continue to carry Omsk Launch Site A as a Type III site.

25X1

Launch Site B at Omsk has been re-evaluated as a result of [] and is now judged to be only a possible site. The two launch pads previously carried at Omsk Launch Site B have been deleted from the tabulation (Table 2). 25X1

25X1

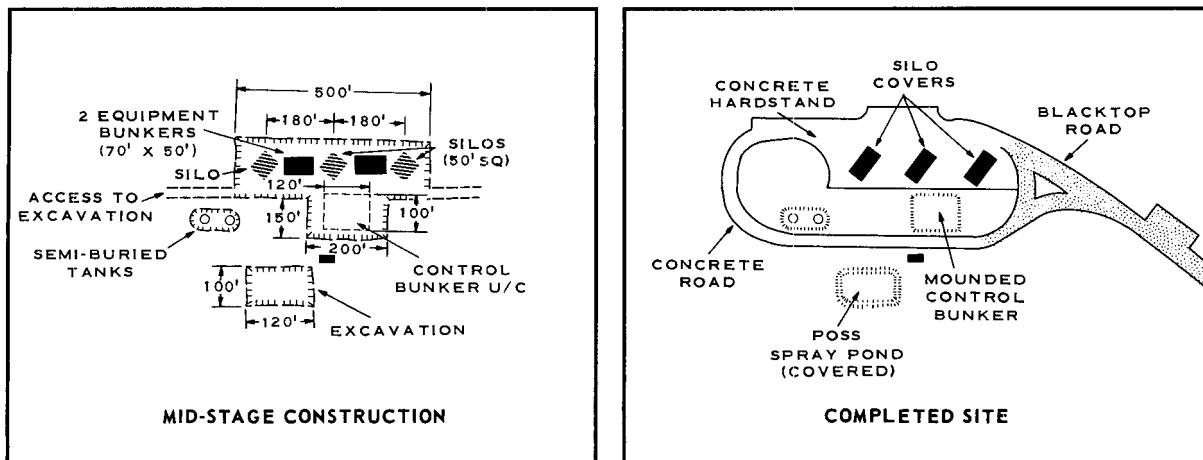

FIGURE 3. TYPICAL TYPE III ICBM CONFIGURATIONS

A total of 130 soft MRBM sites (520 launch pads) and 12 soft IRBM sites (48 launch pads) have been identified to date. These totals include one new confirmed site at Belomorsk, one new probable site at Gvardeysk, and two new possible sites at Lakhdenpokhaya and Kishentsy near Uman. Thirty-three hardened MRBM/IRBM sites (66 launchers) have been identified to date, including three newly identified hardened launch sites at Buynaksk and one probable hard site at Nigrande. Locations of deployed MRBM/IRBM complexes are depicted in Figure 3. The four basic MRBM/IRBM site configurations are presented in Figure 4. Three soft MRBM sites (Kraskino, Rozhdestvenka, and Ugolnyy) have characteristics of both the soft elongated-pad MRBM and IRBM sites. These sites have been designated as MRBM sites since most of the characteristics favor the MRBM.

In this report, one site name has been changed by the DWG to incorporate the name carried in the Target Data Inventory (TDI).

This change is as follows:

Launch Site No 3 at Kivertsy is changed to Trostyanets.

Due to analyses by several agencies, Type IV MRBM/IRBM sites have been variously reported to have two, three, or four launch silos. A detailed study undertaken to resolve this question has resulted in our conclusion that all Type IV launch sites probably have two launch silos. The third silo could possibly be a launch silo but is more likely a personnel and equipment access silo. A fourth object appearing at some launch sites, and reported as a silo by some agencies, has been determined to be an aboveground structure, the purpose of which has not been determined.

It should be noted that all suspect locations are subject to continuous review. When sufficient evidence warrants an assessment of possible or higher, a suspect location will be included in revisions to Soviet Surface-to-Surface Missile Deployment.

[REDACTED] When a location has been evaluated as negative by the DWG, all evidence including [REDACTED] photography will continue to be reviewed for deception, new construction, and unrecognized configurations. The evaluations assigned are based on the latest data and are subject to change as new evidence is made available. Accordingly, this report

will be revised bimonthly to reflect additions or changes in evaluations.

Although some of the locations listed in Table 4 may have some functional relationship to the Soviet missile program, the assessments are limited to launching facilities. Only major differences in assessments are listed in footnotes.

1/ Confirmed cruise missile facility.

9/ Cruise missile launch site.

2/ ASM Test Range.

10/ MRBM firings confirmed - no fixed sites in photog-

raphy.

3/ Cruise missile site.

11/ Two cruise missile launch sites.

4/ Missile-related R & D facility

12/ Referred to as Ugolnyy in some documents. Since
Beringovskiy was formerly known as Ugolnyy, the
DWG has selected Ugolnyy Kopi as the correct place
name for this MRBM/IRBM site.

5/ Possible cruise missile facility

6/ Possible cruise missile launch site.

7/ Cruise missile launch site.

8/ ABM R & D facility.

13/ Space tracking facility.
