PREFACE

This report, formerly published bimonthly by the GMAIC Deployment Working Group (DWG) in mimeograph form, has been expanded to include additional data. It will continue to be published bimonthly in this new format.

Dissemination of the report was previously limited to holders of the DWG report, Soviet Surface-to-Surface Missile Deployment. Because the information contained herein is both supplemental and self-sustaining, distribution will no longer be limited to holders of the above report.

The current format provides a comprehensive, ready reference listing of all ICBM, IRBM, and MRBM deployment locations, types of site configurations, photographic references, estimated construction and operational status, and other evaluations of the DWG. Additional data may be added to future revisions.

INTRODUCTION

This report is the tenth revision of Evaluations of Soviet Surface-to-Surface Missile Deployment prepared by the Deployment Working Group of the Guided Missiles and Astronautics Intelligence Committee. The ninth revision, dated 1 October 1963 and disseminated under control number [redacted] should be destroyed in accordance with existing instructions for handling [redacted] material.

25X1

25X1

25X1

[redacted] and continuing analysis of previous missions have provided additional information on the Soviet ballistic missile deployment program. The new data are reflected in the estimates and operational status shown in Tables 2 and 3. Cut off date for this report is 15 November 1963.

SOVIET ICBM DEPLOYMENT

At the 18 ICBM complexes, three new hard sites, two new soft sites, one possible site, and one suspect site of undetermined type at Yedrovo have been added. These newly identified ICBM sites raise the total number of confirmed and probable deployed sites to 100 (224 launchers), and 3 sites in the possible category. All of the possible sites are in very early stages of construction and it is not yet possible to make a firm evaluation. Of the 224 launchers, almost 150 are considered to be operational. See Figure 1 for locations of deployed ICBM complexes.

The number of operational launchers may be somewhat smaller than indicated in Table 1 because the lack of recent photography has made it difficult to determine the exact month of completion of many of these sites. Most Type IID sites were started in a relatively short period of time after [redacted] and many of these sites should be completed in the [redacted] time period. Therefore, we have

included most of these Type IID as being operational on [redacted]

25X1

The ICBM sites have been designated by types for the purpose of standardization, as shown and explained in Figure 2.

The new ICBM launch sites are located at the following complexes:

GLADKAYA

Launch Site D (5), Possible, Type undetermined

KOSTROMA

Launch Site H (8), Probable, Type IIIA

OLOVYANNAYA

Launch Site C (3), Probable, Type IIIA

TEYKOVO

Launch Site F (6), Type IID

Launch Site G (7), Type IID

YEDROVO

Launch Site H (9), Type IIIA

Launch Site I (3), see page 3.

Developments at Type IIC Sites

As reported previously, no new sites of this type have been identified since [redacted]. The last photographic coverage of Tyumen was obtained in [redacted] when Launch Site B was reported as INACTIVE while construction continued at the other two sites. All Type IIC sites have been assessed as complete and operational except Launch Site B at Tyumen.

25X1

25X1

ICBM Firing from Plesetsk, 22 October 1963

The ICBM firing to Kamchatka on [redacted] probably was a training or systems reliability test from an operational ICBM site at the Plesetsk complex. This constitutes the first known launch of an ICBM from a point other than the Tyuratam Missile Test Center.

25X1

25X1

No telemetry or tracking was noted during the missile flight, and the [redacted] derived launch point falls in the vicinity of the Plesetsk complex. Insufficient data preclude an assessment as to the type of ICBM--SS-6, SS-7, or SS-8--that was launched.

25X1

Suspect Installation at Yedrovo

The Deployment Working Group has examined the evidence on a suspect installation at the Yedrovo ICBM complex (Figure 3). Listed below are the major arguments for and against this installation being an ICBM site.

Arguments For:

1. This installation is appropriately located within the complex in relation to the other confirmed launch sites.
2. The installation has double security fencing, enclosing an area of about the same size as other known sites.
3. One photo analysis suggests an impression of a loop road pattern, control bunker, and spray pond--these features oriented in the

same manner as the other confirmed hard site at Yedrovo.

4. There is an adjacent support area, as is the case in other hard sites, and wide-radius turns in the road entering the site location.

Arguments Against:

1. Another photo analysis indicates no identifiable site elements on any photo coverage.

No excavation was seen on either [redacted] [redacted]. This indicates that the excavation, silo construction, and back-filling must have occurred in 12 months. This timing is only half that required at other hard sites.

2. [redacted] shows considerable snow cover. Track activity is apparent at all launch sites under construction in the complex on this photo coverage, but not at this location.

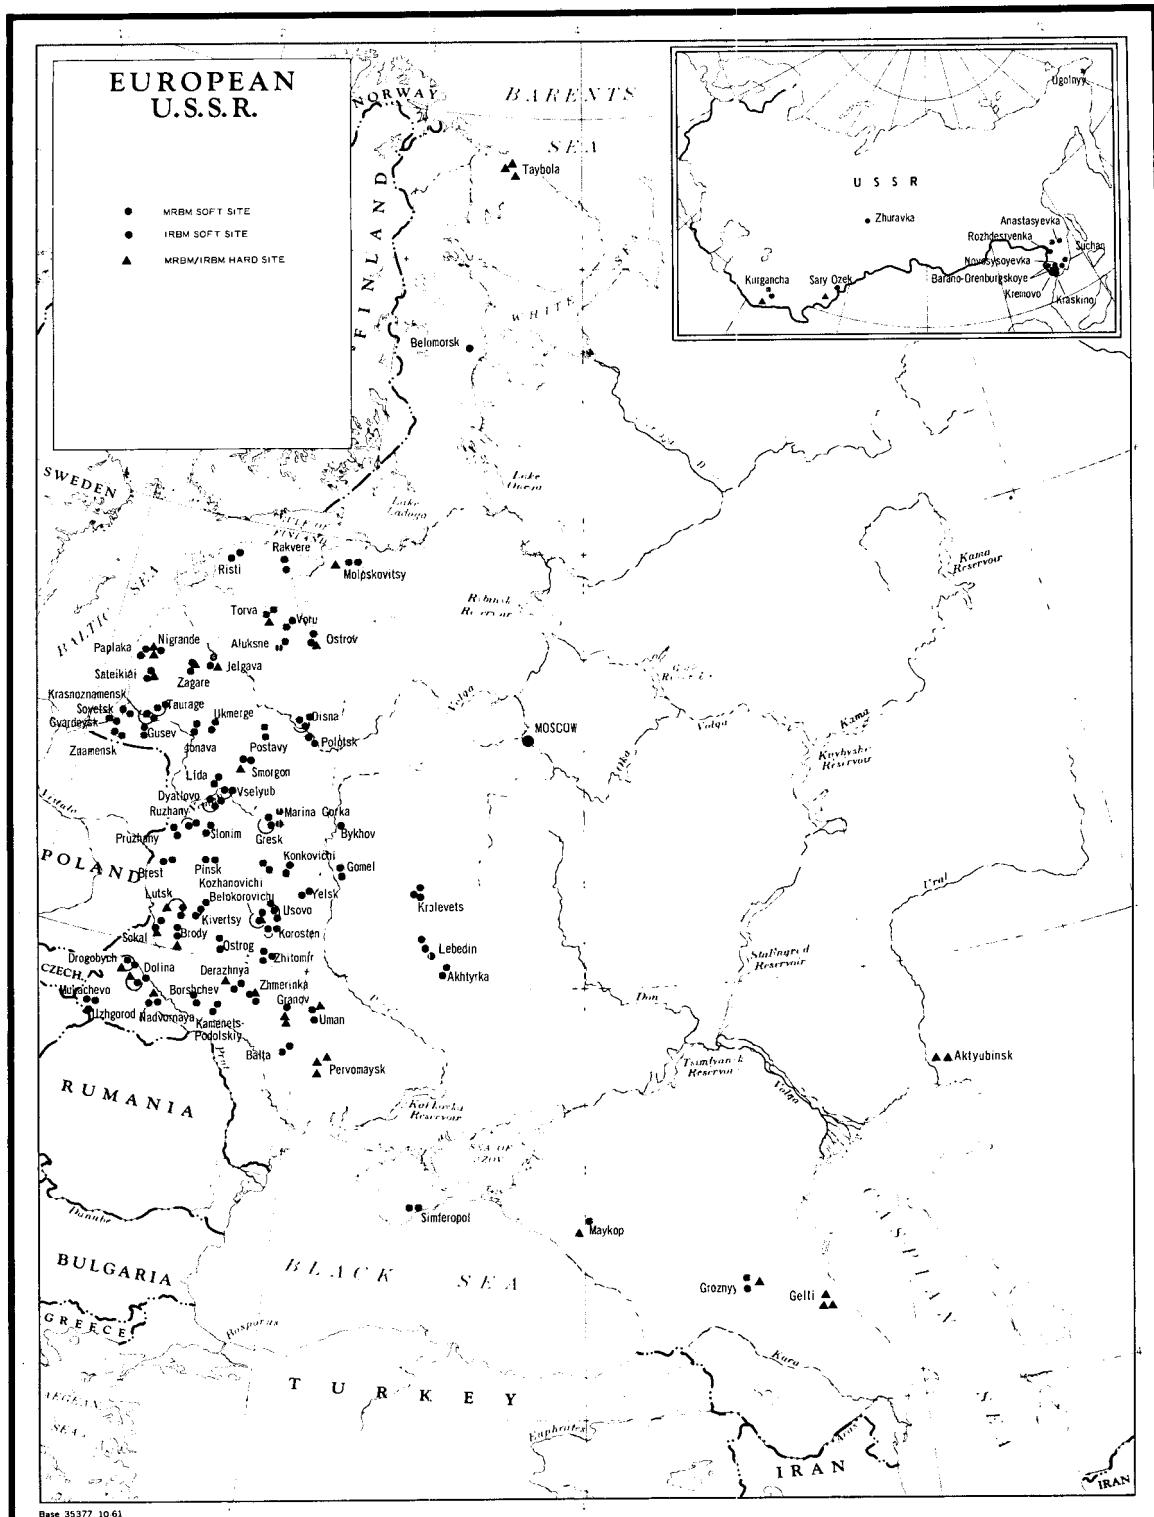

FIGURE 4. DEPLOYMENT OF SOVIET MRBM/IRBM COMPLEXES.

NPIC H-6167 (12/63)

25X1

25X1

3. Photo interpretation, to some members, indicates that the cleared area and the elements therein appear basically identical when comparing [redacted]. Further, many buildings have been removed from the support area for this installation in later photographic coverage.

4. It is believed that the Soviets may have intended to build an ICBM site at this location; however, all photo evidence indicates that construction ceased and the site was never completed.

The Committee considers that the evidence at this time is insufficient to make a positive assessment as to the specific purpose of this installation. One member believes this is probably a completed hard ICBM site, two members believe it is possible, and three believe it is undetermined. Should this installation be a completed hard site, the Soviets have probably practiced deception and/or camouflage.

SOVIET MRBM/IRBM DEPLOYMENT

25X1

No new operational sites were identified on [redacted]. However, reevaluation of the Kremovo MRBM complex has resulted in the judgment that a probable soft launch site is located at Kremovo and Lyalichi, respectively. Both sites are considered complete. [redacted]

25X1

[redacted] These facilities are also apparent at other confirmed MRBM sites. Other features at these two sites are not as clearly identifiable; however, when [redacted] evidence was considered together with the photographic evidence, the Deployment Working Group unanimously accepted both installations as probable MRBM sites. See Figure 4 for locations of deployed MRBM/IRBM complexes. Typical configurations of MRBM/IRBM launch sites are shown in Figure 5.

Fixed Field-Type MRBM Sites

Documentary evidence [redacted] and [redacted] evidence [redacted] indicate that Soviet MRBM deployment concepts include fixed field-type sites providing alternate launch positions. The first site of this category was identified [redacted] near the Anastasyevka complex. Subsequently, seven additional sites have been identified, and all but one are in the vicinity of confirmed MRBM complexes. These sites (Figure 6) generally consist of from one to four launch pads, each in a cleared area. Existing roads have been utilized as approaches to the sites and minor improvements, particularly on turns, have been made. Support facilities have not been identified at the field-type sites. The eight fixed field-type sites identified to date, and the MRBM complexes with which they are associated, are as follows:

Anastasyevka (Anastasyevka Complex)
48-32-15N 135-31-45E - 4 Pads

Gelvonai (Ukmerge Complex)
55-07-15N 24-43-45E - 1 Pad

Khmelnitskiy (Derazhnya Complex)
49-25-00N 27-06-30E - 2 Pads

Sivtsy (Postavy Complex)
55-09-30N 26-52-45E - 1 Pad

Smorgon (Smorgon Complex)
54-34-45N 26-21-30E - 2 Pads

Tulskaya (Maykop Complex)
44-31-15N 40-14-15E - 3 Pads and 1 Prob Pad

Vainode (probably abandoned) (Nigrande Complex)
56-28-15N 21-51-00E - 2 Pads

Yarmolintsy (None)
49-12-00N 26-46-45E - 4 Pads

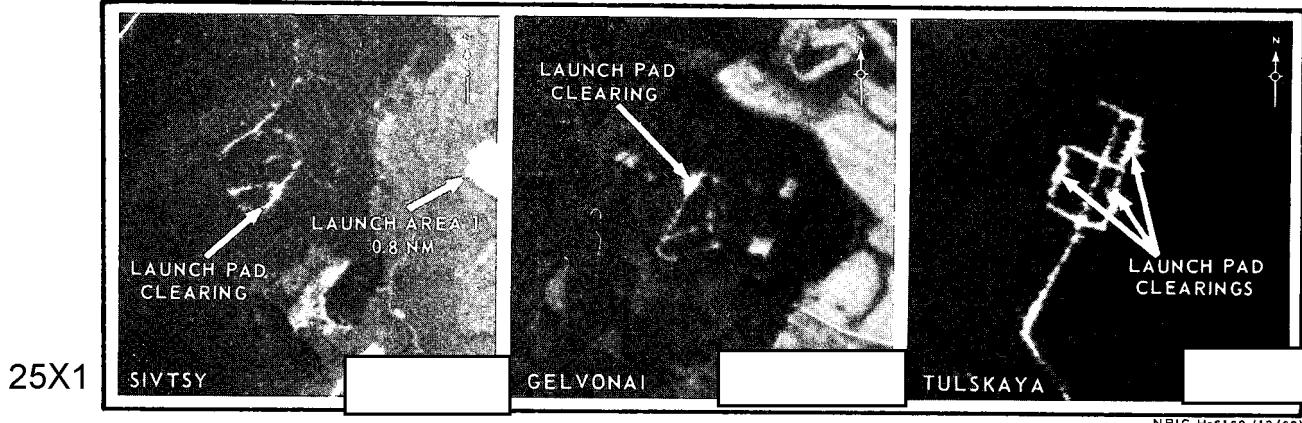

FIGURE 6. FIXED FIELD-TYPE MRBM SITES.

Possible MRBM Training Site, Sovetskaya Gavan

Since [redacted] a total of seven MRBM firings to the Kamchatka impact area has been detected. All originated in the Sovetskaya Gavan area, but [redacted] coverage failed to reveal any identifiable launch area from which the missiles could have been launched. [redacted] however,

revealed a possible launch facility (Figure 7) near the Sovetskaya Gavan/Vanino Airfield. Backtracks of several of the missile firings terminate in the vicinity of this installation. This secured facility consists of an irregular road pattern and contains one possible and three suspect pads. This facility was not present on

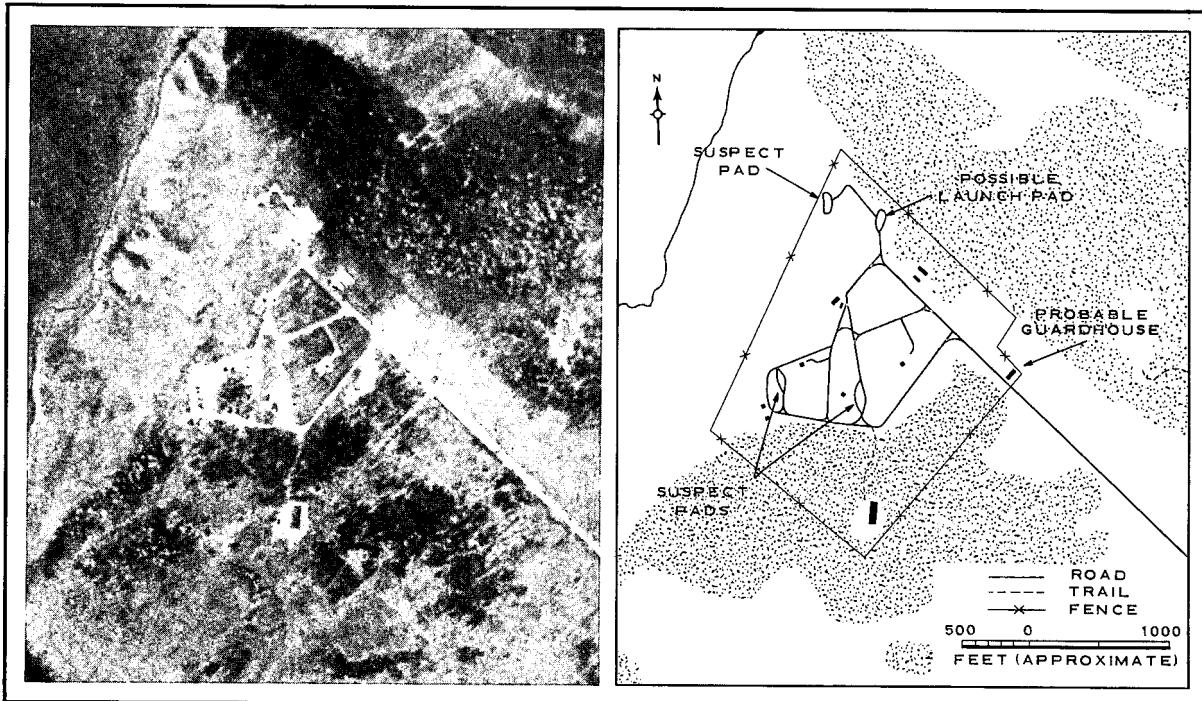

FIGURE 7. POSSIBLE MRBM TRAINING SITE, SOVETSKAYA GAVAN.

25X1

25X1

 and first

25X1

appeared on

25X1

 The site is located about 900 miles from the Kamchatka impact area. We are tentatively evaluating this facility as a training site.**MRBM/IRBM Hard Sites**

Our analysis to determine the number of launch silos at hard MRBM/IRBM sites is near-

ing completion and will be discussed in the 1 February 1964 revision of this publication. Meanwhile, we are continuing to carry two launchers at both MRBM and IRBM hard sites. Additionally, we are currently assessing evidence of possible attempts at camouflage or deception at some of these sites. Information will be incorporated in subsequent reporting when the analysis is completed.

*TABLE 1. SUMMARY OF ESTIMATED STATUS OF IDENTIFIED ICBM AND MRBM/IRBM LAUNCHERS AT DEPLOYED COMPLEXES**
