[REDACTED] reveals changes at the Solid Propellant Test Facility and the probable solid propellant manufacturing section at Kamensk-Shakhtinskiy, USSR.

A large rectangular building has been constructed in the Test Facility between the test cell and the offset possible temperature conditioning buildings. The height of this building has not yet been determined, but it is comparable to that of the offset buildings. Construction continues in the probable solid propellant manufacturing section, 1 nm southwest of the Test Facility. Two new buildings have been constructed and another building previously under construction has been completed in the adjoining secured area southwest of the production area. Work appears to be continuing on the interior rail net of the manufacturing section. When completed the rail net will provide service to each major building in the separately secured area and to five of the partially revetted buildings immediately adjacent to the fence in the production area.
