ECONOMIC INTELLIGENCE STATISTICAL HANDBOOK

CIA/RR RA-12-R1
(ORR Project 00.1758)

NOTICE

This compilation was prepared primarily for use in ORR and is not a formal ORR publication. Data for the Sino-Soviet Bloc are the best estimates of ORR as of 1 July 1957.

FOREWORD

1. Objectives and Scope.

The *Economic Intelligence Statistical Handbook*, 1957 (hereafter referred to as the 1957 Handbook), is a concise reference work in tabular and graphic form designed to supply data, primarily on production and inventories, which are pertinent to the analysis and comparison of the economic characteristics of the Sino-Soviet Bloc countries and the countries comprising the North Atlantic Treaty Organization (NATO).

Countries of the Sino-Soviet Bloc included in the 1957 Handbook are the USSR, Communist China, North Korea, North Vietnam, and the European Satellites (Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Rumania). The total production of these countries is compared with that of NATO, whose member countries are Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the UK, the US, and West Germany. The Saar has been added as a separate political entity because its industrial production is often listed separately in the sources used.

The 1957 Handbook covers primarily the years 1938, 1950, and 1954-56. The previous handbook, which was published in February 1957, covered the years 1938 and 1946-55 and included 1956 estimates for the Sino-Soviet Bloc. The 1957 Handbook is a revision of the preliminary data published earlier and contains data which are believed to be more firm. A more complete series—1938, 1946, 1948, and 1950-56—has been included in this edition for the commodities considered most important as a measure of economic development. Graphic presentation of the data for these commodities has also been included. Data for individual NATO countries, except for the US, have been included only for the years 1954-55 or 1955-56. When available, data for other

major producers of the Free World have also been included for the same years. The US data are given for each year and are always included in the NATO total.

2. Sources and Reliability.

Unless otherwise indicated by a source note, data for the Sino-Soviet Bloc countries are ORR estimates contained in the ORR Central Estimates File as of 1 July 1957. To provide a central source for up-to-date reference data, ORR analysts contribute to this file all economic estimates as they are made and revise them regularly. Some of these estimates are provisional. The wealth of statistical data contained in economic handbooks issued by various Sino-Soviet Bloc countries during the past year has increased the general reliability of data contained in this publication compared with previous issues.

Data for the NATO countries were selected from the most reliable and most current sources available. In general, these sources are unclassified publications of the UN and of the Organization for European Economic Cooperation (OEEC) and official statistical publications of the various countries. Reasonable care was exercised in selecting the sources, but CIA does not assume responsibility for their accuracy. A list of the major sources used is included in this volume.

Blanks which appear in the data for any country listed indicate that information was not available as to either the amount or the existence of production. The omission of country names from the table likewise indicates that information was not available as to the amount or the existence of production. However, where it is known that there was no production in a Sino-Soviet Bloc country, this fact is stated in a footnote. Such a statement in regard to the NATO

countries was not possible, because the sources did not usually distinguish between "No Production" and "Not Available."

3. Boundaries.

Because the Sino-Soviet Bloc is relatively new and because significant boundary changes have occurred during the past 25 years, comparability of data becomes an important problem in analyzing some series. Unless otherwise indicated, boundaries of the countries in this research aid are those presently in force, and the data for earlier years have been adjusted accordingly.

4. Time Series.

No attempt has been made in compiling the 1957 Handbook to adjust time series to take account of such problems as homogeneity of the product and consistency of reporting systems. Those inconsistencies which are known to be unadjusted have been indicated in footnotes to the individual tables.

5. Rounding.

With the exception of a few tables, the data in this report have been rounded to three significant digits. The term "Negligible" has been used to indicate that some production is known to exist but that the amount is too small to be significant.

6. Totals.

Totals for NATO and Sino-Soviet Bloc countries are simple additions of unrounded data. Hence they may not always agree with the sum of the rounded figures which appear under the individual country headings. No adjustment has been made to compensate for gaps in country data. Totals were omitted, however, when they were obviously far from the true total of production. Estimated world totals have been included only when the estimates were available in the source publications and when they did not conflict with the summation of the other data appearing in the table.

Rumania.....	3.07	2.78	3.24	3.57	3.68	4.21	4.48	5.00	4.97

^a Preliminary.

^b The estimates shown for the European Satellites are only rough indicators of the relative size and rates of growth of the gross national products (GNP) of these countries. The annual rates of growth which may be calculated from these values are considered less reliable than the changes indicated for longer periods. Because of the limitations of the data from which these estimates are derived and because of possible differences in concept and methodology, these GNP values are not necessarily closely comparable with estimates for other countries.

Table 2
 GROSS NATIONAL PRODUCT AT FACTOR
 COST IN THE USSR, BY END USE,^a 1950,
 1953, 1955, AND 1956

	Billion 1955 Rubles ^b

Defense.....	101	117	138	147
Administration.....	23	22	21	21
Total.....	675	830	951	1,050

^a GNP at factor costs equals GNP at market prices plus subsidies minus indirect taxes.

^b Conversion to US dollars is not possible, because the ruble-dollar ratio for GNP was derived at market prices, not at factor cost. For US dollar valuation of GNP at market prices, see Table 1.

Rumania.....	73	71	100	114	131	149	154	178	184

^a Official index for North Korea is on the basis of 1948 = 100.

^b Preliminary.

^c Officially announced index with minor adjustments.

^d The indexes shown for the European Satellites are only rough indicators of the growth of industrial production in these countries, particularly in the case of annual changes. Despite their limitations, these indexes are believed to give a more accurate impression of the growth in net industrial production than do the official data concerning gross industrial production.

^e This index is not entirely comparable with the estimates of GNP that are given for Hungary in Table 1. The GNP values for the period 1950-56 are based in part on the official index of national income, which is considered the best available indicator of the trend in GNP. However, official data on net industrial production (which would be used in calculating the official index of national income) are not published by the Hungarian government. Considering the trend shown in the official index of national income, the figure for 1951 in the present rough index of industrial production appears to be too small and the figures for 1954-56 appear to be too large.

Budget surplus.....	9.7	4.7	26.7	24.8	23.1	22.4	13.4

^a An appropriate ruble-dollar ratio is not available to express the budget in terms of US dollars. It would be misleading to convert the rubles to dollars at the official exchange rate of 4 rubles to 1 US dollar. An idea of the importance of the budget in the national economy is seen by the fact that the 1955 expenditure of 539.5 billion rubles is about 42 percent of the GNP at market prices.

^b All figures in parentheses are estimates.

^c In 1954-55 the Soviet budget included revenue and expenditure entries for retail price reductions (representing revenue foregone) and tax rebates to procurement organizations for paying higher agricultural procurement prices. After 1954, there were no more entries for retail price reductions, and tax rebates to procurement organizations were gradually abolished between 1954 and 1956. In 1955 the expenditure entry for rebates was transferred into Procurement, under Financing the national economy.

^d Actual expenditures for reserve funds are shown as zero because any reserve funds spent are listed under the category for which they are spent.

^a Because of the difficulty of determining a valid exchange rate, yuan have not been converted into dollars. The rate of 2.46 yuan to 1 US dollar usually quoted is based on the yuan-sterling rate for telegraphic transfers. This should be used with caution, as it is not applicable to the budget data. The budgets of 1956 and 1957 reflect the price cuts of 1956 and, if expressed in the old prices, would be about 3 percent higher.

^b Carried over from previous year.

^c The budget speech gives this figure as the surplus funds accumulated since 1949. The Chinese Communists in calculating surplus funds exclude certain of the expenditures for 1951 and 1952 and add certain items to 1950 receipts. Because the 1955 budget speech states that roughly half of the surplus had been previously allocated, only ¥3,155 million is carried over into the 1955 budget.

^d Including a grant to the banking system of ¥600 million and a general reserve of ¥594 million.

* Data refer to the annual average of civilian workers 12 years of age and older in the Sino-Soviet Bloc, to the annual average of civilian workers 14 years of age and older in the US, and to the total labor force including armed forces in the other NATO countries. For details regarding the number of armed forces included, see the following footnote.

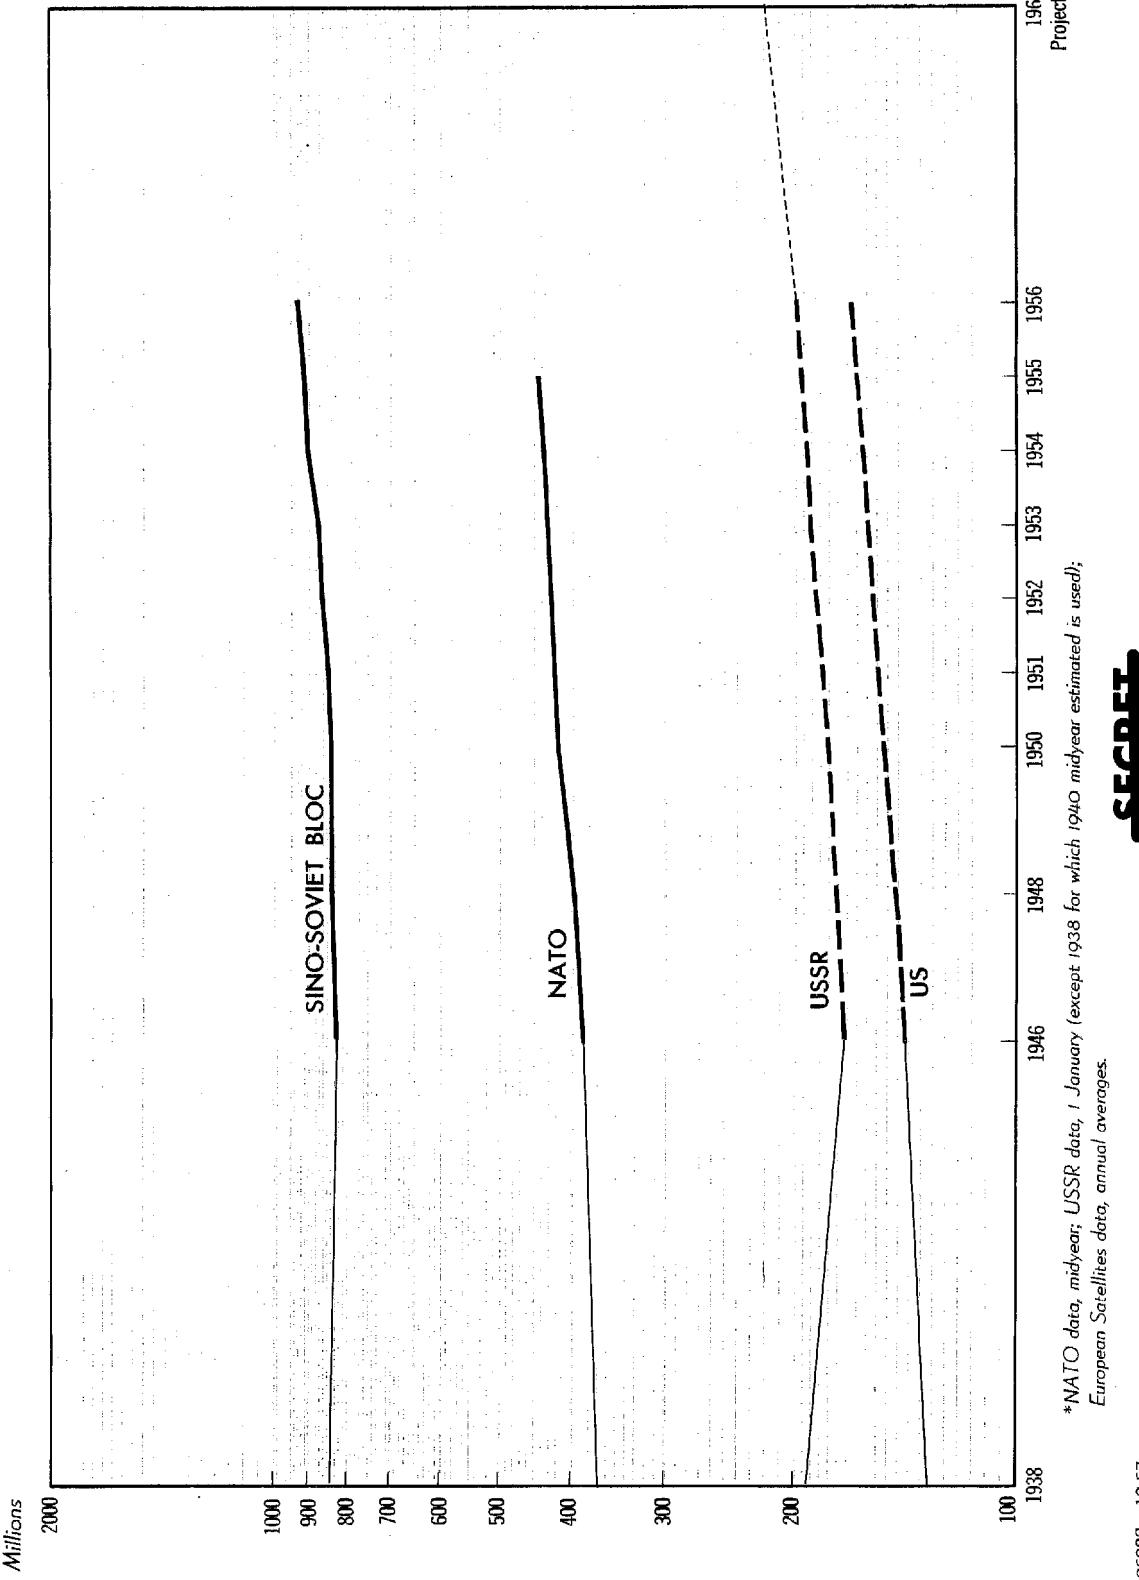

^b Excluding Denmark, Iceland, Portugal, and Turkey. For countries other than the US, armed forces are included. In 1954 the armed forces made up 2,805,800 of the total labor force of those countries; in 1955, 2,733,500.

^c Including unemployed.

^d In terms of man-years.

^a Annual average of workers 12 years of age and older.^b Including employed persons 14 years of age and older.

^c The decline in the annual average between 1952 and 1953 is artificially high because of the transfer of 1.3 million collective farmers to employment on machine tractor stations late in 1953. The number of farm workers employed at the end of 1952 was 46.1 million; at the end of 1953, 45.5 million.

^a Including all NATO countries. The 1946 figure does not include Greece and West Germany. Data normally refer to net production (that is, total production less electricity consumed by the producing plants themselves) by both public utilities and auto-producers (private power stations producing power to supply a specific undertaking). The exceptions are Germany and the Netherlands in 1946-55, for which the data show gross production, and Canada, Denmark, and the UK, for which data cover only enterprises generating primarily for public use. Production by stations with installed capacity below a certain minimum, which varies by country, is also excluded.

^b All US public supply statistics are reported on a net basis. That is, the data represent power available at the bus bar and thus exclude station use and losses. They do include, however, transmission and distribution losses. When used to compare with Soviet Bloc data, about 5 percent should be added, because, as far as is known, Bloc production data are on a gross basis.

* Estimated.

^a Including hard (anthracite and bituminous) and brown coal and lignite.

^b Million metric tons of standard fuel. The average calorific values used to convert to standard fuel of 7,000 kilocalories per kilogram are listed below. Calculations for standard fuel were not carried out for pre-1952 data, because to do so, using these same values, would be misleading. In most countries, there has been a deterioration in quality of coal since 1938 which has resulted in lower calorific values. As the trend has not been uniform, neither over time nor by individual country, it would be very difficult to arrive at the appropriate calorific values to be used for years prior to 1952.

^a Including Canada, Denmark, France, Italy, the Netherlands, Norway, the US, and West Germany.

^b Agricultural use. In addition, Canada produces a negligible amount of peat for fuel.

^c 1936.

^d Fuel only.

^e In addition, Norway produced 21,000 metric tons for agricultural use each year in 1954 and 1955.

^f Predominately for agricultural use. The amounts used as fuel were 55,000 metric tons in 1954 and 60,000 metric tons in 1955.

^a Excluding Belgium, Denmark, Iceland, Luxembourg, and the Netherlands.

^b Although most sulfur produced in the US is elementary sulfur, the following amounts were produced from pyrites: 1938, 222,000 metric tons; 1950, 399,000 metric tons; 1954, 411,000 metric tons; 1955, 402,900 metric tons; and 1956, 392,800 metric tons.

^c Although most sulfur produced in the USSR is from pyrites, the following amounts were elementary sulfur: 1938, 79,000 metric tons; 1950, 100,000 metric tons; 1954, 124,000 metric tons; 1955, 140,000 metric tons; and 1956, 158,000 metric tons.

^d Including sulfur from pyrites only.

^e All sulfur produced from pyrites, except in East Germany in 1954-56.

^f The 1938 and 1950 figures include only sulfur from pyrites, although there may have been a small amount of elementary sulfur produced in 1950. Production of elementary sulfur in other years is as follows: 1954, 88,300 metric tons; 1955, 95,400 metric tons; and 1956, 95,400 metric tons.

^g Sales.

^h Including production of elementary sulfur, as follows: 1954, 207,000 metric tons; and 1955, 183,000 metric tons.

^a Raw value, centrifugal sugar. Refined sugar is equal to approximately 90 percent of raw sugar by weight. Centrifugal sugar, as distinguished from noncentrifugal, includes cane and beet sugar produced by the centrifugal process. Both cane and beet sugar are included where produced.

^b Excluding Greece, Iceland, Luxembourg, Norway, and Portugal. Years shown are for crop years. Generally the harvest season begins in the fall months of the year shown or in the early months of the following year except in the Southern Hemisphere, where the season begins in May or June of the year shown.

^c Preliminary.

^d 1937.

^e Centrifugal and noncentrifugal sugar.

^f 1937-41 average.

^g 1935-39 average.

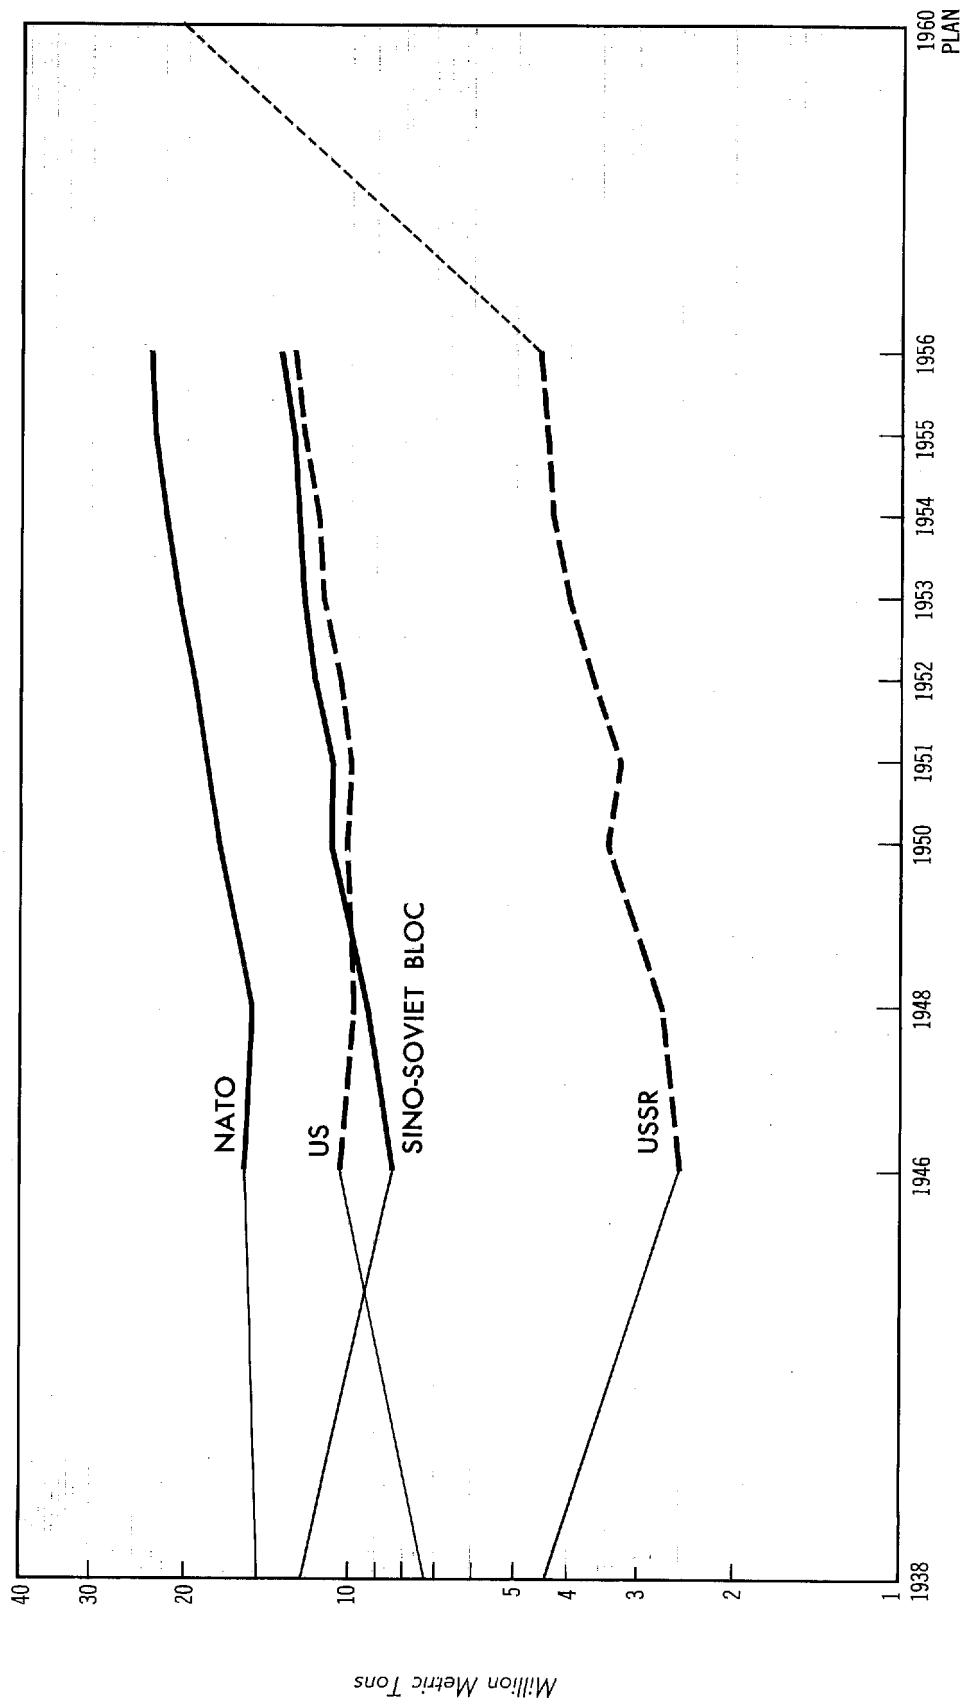

^h Some countries listed also produce a large amount of noncentrifugal sugar. Noncentrifugal sugar includes all types of sugar produced by other than the centrifugal process. The estimates include such kinds known as piloncillo, panelo, papelon, chancaca, rapadura, jaggery, gur, muscovado, panocha, and the like, used largely for consumption in the relatively few areas where produced:

* Because physical units include cars of 2, 4, or more axles, the term does not represent an exact measure of carrying capacity. It is used here, however, because this is the form in which NATO, USSR, and European Satellite data currently are being published. Although the European NATO countries are still producing some smaller cars, all US, USSR, and much of Satellite production now consists of 4-axle units.

b Including Canada (except 1956), France, Italy, Norway (except 1952-56), the UK, the US, and West Germany. Data refer to all types of goods-carrying cars, except baggage and mail cars, unless otherwise noted.

c No production in North Korea, North Vietnam, or Albania.

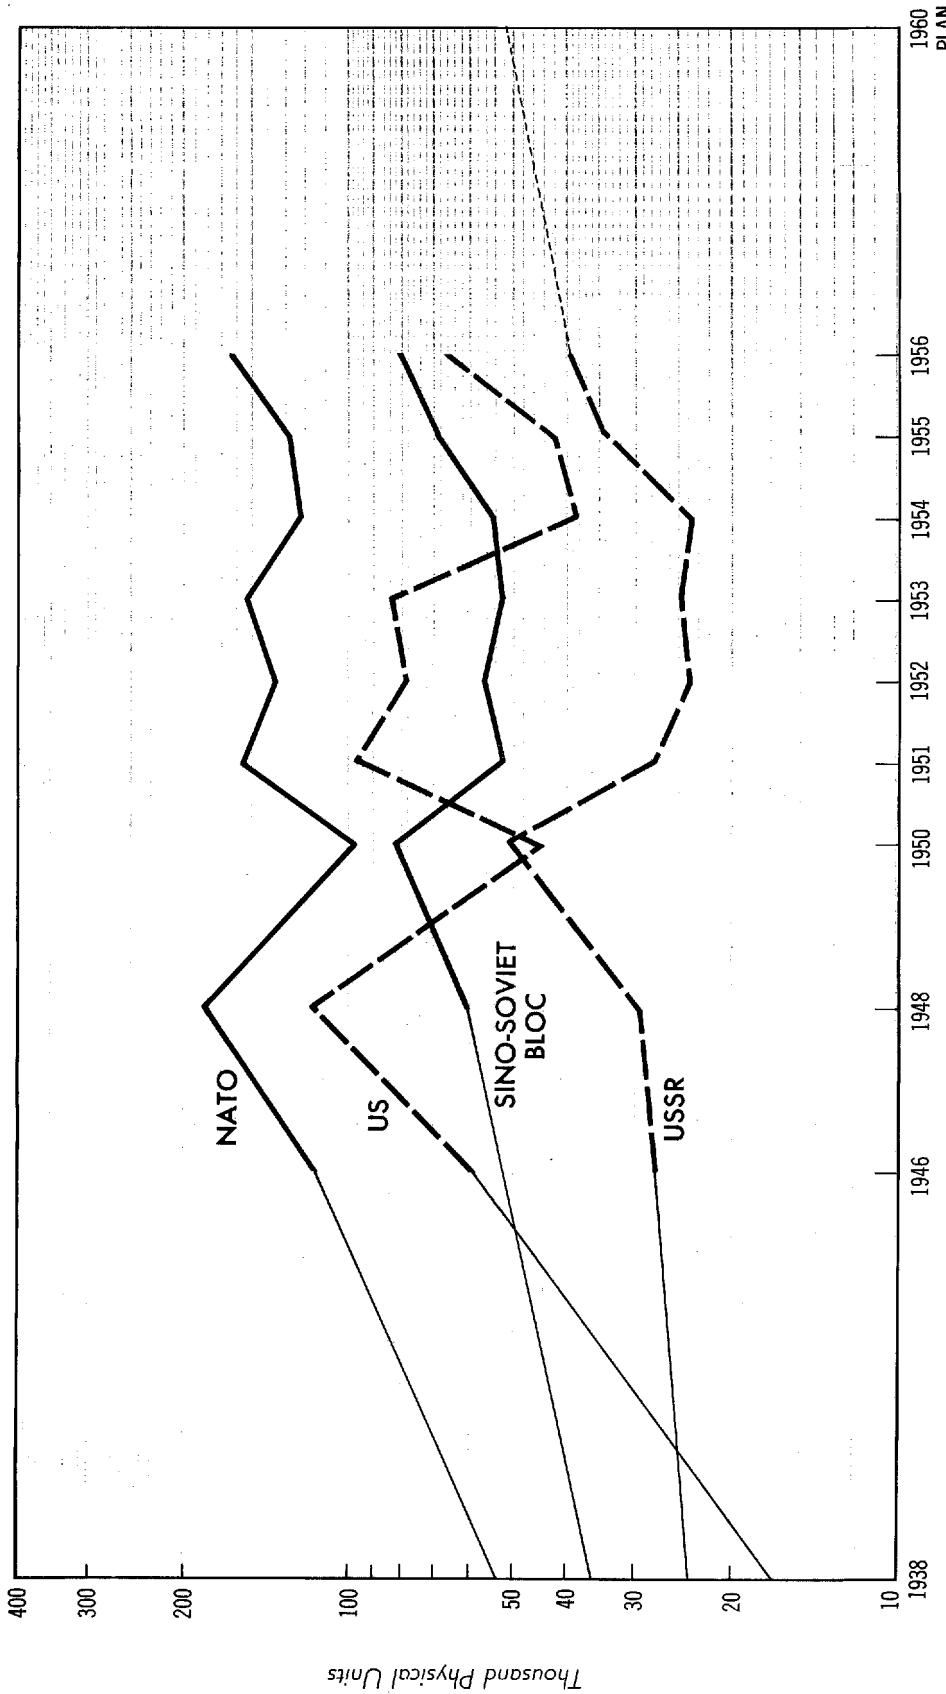

d Data for all years include coaches, baggage cars, and freight cars.

e Including passenger cars after 1950.

^a Including only vessels of 1,000 GRT and over. Figures for non-Bloc countries exclude merchant ships owned by any military force and vessels of special type such as ice breakers, cable ships, and the like. US and Canadian figures exclude vessels trading on the Great Lakes. Data for non-Bloc countries are for 30 June of the year unless otherwise noted. Data for Bloc countries are for the end of the year unless otherwise noted.

^b 1 September 1939.

^c Including vessels in the national defense reserve fleet. Excluding vessels which were transferred to other flags under Lend Lease or other agreements and which remain under those registries as a result of subsequent arrangements.

^d 31 December 1950.

^e Albania has no merchant fleet.

	Tankers.....	54	38.0
	Total.....	234	26,000	170.0
1953	Barges.....	120.0

^a Deadweight tonnage (DWT).^b Including both SDGP (Soviet Danube fleet) and DDSG (a portion of the Austrian Danube fleet taken over by the USSR).^c About 10 percent of the dry cargo barges and the passenger vessels may be assigned to the Tisza River.^d Excluding harbor tugs.^e Including vessels which may be on loan from or rented from the USSR.^f It is probable that a large part of Rumania's fleet, perhaps as much as 35 percent, was out of use or under repair because of age in the postwar years up to 1955. From 1955 onward, indications are that new construction and repair are bringing the number of vessels actually in operation closer to the estimated totals shown.^g Estimated from Yugoslav records of total fleet on all rivers.^h Known as the DDSG.ⁱ Including 16 rented vessels: 4 tugs, 2,530 HP; 12 barges, 11,778 tons.^j Including only 1953 data plus vessels due to be returned in 1955-56 by USSR. No information is available on new construction.

^a Because of the difficulty of determining valid exchange rates, data are not presented in terms of a common currency. In lieu of rates which would be appropriate to apply to the construction industry, the following official exchange rates are listed here merely to give a general idea of the value of the foreign currencies. These rates should be used with caution, as they were arbitrarily established and maintained.

Country	Currency	Value in US\$
USSR.....	1955 ruble.....	0.25
Czechoslovakia.....	1953 crown.....	0.1389
East Germany.....	1950 Deutsche Mark.....	0.30
Poland.....	1955 zloty.....	0.25
