ECONOMIC INTELLIGENCE
STATISTICAL HANDBOOK

1964

CIA/RR A.ERA 64-3

WARNING

This material contains information affecting the national defense of the United States within the meaning of the espionage laws, Title 18, USC, Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited by law.

CENTRAL INTELLIGENCE AGENCY
Office of Research and Reports

FOREWORD

1. *Purpose and Scope*

The purpose of the *Economic Intelligence Statistical Handbook, 1964*, is to provide reliable statistics that have proved to be of greatest reference value on the economies of the Communist countries* and of the countries of the North Atlantic Treaty Organization (NATO).** Every effort has been made to provide the latest information possible, and extreme care has been exercised in selecting sources, making the data consistent and comparable, and determining that the data are both accurate and meaningful.

The content and format of the *Handbook* have been revised to provide the user with more explicit and extensive economic comparisons. New tables have been added, and some tables of marginal interest in previous issues of the *Handbook* have been excluded.

New concepts in presentation have been used in the *Handbook*—such as tabular graphics, in which the data are presented in a combined table and chart. Both the usual graphics and the tabular graphics are designed for further possible use as visual aids. To facilitate locating all information on a subject, the format of the table of contents has been revised to combine the listing of graphic material and the tables on the same subject rather than to list the graphics separately at the end of the table of contents as in the previous *Hand-*

*Including the USSR, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Rumania, Communist China, North Korea, North Vietnam, Albania, Cuba, Mongolia, and Yugoslavia.

**Including the US, Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the UK, and West Germany. The Saar has been treated as a separate entity for certain commodities because its production often was listed separately in the sources used. Data for Alaska and Hawaii, when available, have been included in the total for the US.

book. Footnotes have been used liberally to denote definitions, exceptions, and methodology.

The data in the *Handbook* are presented for selected years in the period 1955–63, with plan data or estimates of plan data given for the Communist countries for 1965. Summary country tables are presented for all the Communist countries and for India. The data for Mongolia, because of their scarcity, are presented in a country table but are not included in the individual commodity or aggregative tables. Two unclassified tables—Selected Conversion Factors and Foreign Rates of Exchange for Currencies of the Communist Countries—that may be useful for converting data are included immediately following the index.

2. *Rounding and Totals*

In each table the data for the individual countries have been rounded consistently to permit the maximum use of available information. Because of the limitations in the cumulative data, the totals have been rounded, with few exceptions, to three significant digits. In general, zeros appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation.

Totals are not presented if missing data are believed to represent a significant part of the total. The data for countries in which little or no production takes place, or for which the data are not available, are not presented. Because of rounding, components may not add to the totals shown.

3. *Symbols*

In the tables the abbreviation *N.A.* (not available) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation *Negl.* (negligible) is used when the magnitude of the data is less than half of the final unit employed for each table.

SECRET

4. Classification of Data

The over-all classification of the *Handbook* is SECRET. The unclassified data, indicated by an asterisk (*), may be official unclassified data of the countries included or may be unclassified estimates of this Office.

5. Sources

The data given for the most recent years frequently are preliminary and subject to revision. The data for the Communist countries are estimates of this Office, official data of the respective countries, or estimates made by other organizations. The data for the NATO countries are from publications of the United Nations and the Organization for Economic Cooperation and Development (OECD), from the official publications of other individual countries of the Free World, and from unclassified publications of the US Government.*

6. Acknowledgments

Programing, coordination, and assembly of all data for the *Handbook* were the responsibility of the Economics Accounts Section, Publications Staff, Office of Research and Reports (ORR). Numerous contributions were submitted by analysts of this Office, and valuable assistance was given by other governmental organizations. The Cartography Division of ORR designed all of the graphics, and the Printing Services Division of the Office of Logistics had the responsibility for composition and printing.

* Classified data for Table 136, p. 147, are from the following sources: for the Communist countries and NATO except the US: Defense Intelligence Agency, PC 230; 1-1-64, *Strength and Disposition of Foreign Navies*, 1 January 1964, SECRET; for the US: Navy, OPNAV Op-333F/jet Ser 0261P33, *Report of Inventory and Assignment of Naval Ships as of 31 March 1964*, 3 April 1964, CONFIDENTIAL.

* An asterisk indicates that the data are unclassified.

^a A measure of the physical volume of goods and services produced by the economy, expressed in terms of market value at constant prices.

^b Preliminary.

^c The base year is 1955.

^d The dollar values of gross national product (GNP) shown for the individual European NATO countries (total NATO excluding the US and Canada) in 1955 are estimates of Milton Gilbert and Associates, using the geometric mean of European and US weights. The aggregate GNP for the European NATO countries in 1955 was estimated by the US Department of State, using the estimates of Milton Gilbert and Associates and rough calculations for countries not listed. Estimates for other years were obtained by multiplying the 1955 data in dollars by indexes of GNP at constant prices for the respective countries.

^e Including data for the Saar and West Berlin.

^f The values for the European Satellites have been calculated in a manner that makes them reasonably comparable with the values shown for the European NATO countries. Therefore, these estimates for the Satellites should not be compared with dollar values for Western countries that are obtained by applying the official rates of exchange.

Table 3

Gross National Product, by End Use, for the US and USSR
 1962

	US	USSR	USSR as Percent of US
	Billion 1962 US \$ ^a		
Consumption.....	357.7	105.2	29.4
Investment.....	97.8	82.1	83.9

Education.....	27.2	20.5	75.4
Administration.....	20.5	12.2	59.5
GNP.....	554.9	263.8	47.5

^a US market prices. Soviet gross national product (GNP) was converted to dollars *not* by the official rate of exchange but by the average purchasing power ratio of the dollar and the ruble calculated from actual (or estimated) prices paid for various goods and services in the two economies.

The end use components of GNP—consumption, investment, and the like—were estimated by different statistical methods and in the Soviet case were made consistent with the total dollar value of GNP by arbitrary adjustments. The Soviet defense expenditure in dollars, however, is unadjusted and is the best estimate of its size compared with US defense expenditures.

The magnitudes for the Soviet end use components are calculated to measure quantity of output compared with the US but not the cost in resources. The share of total economic resources devoted to a particular end use in the USSR should be measured in internal ruble prices and costs. Agriculture alone uses 43 percent of the labor force, or 49 million people, as a result of the inefficiency of that sector in the USSR.

The adjusted component parts of GNP are defined as follows:

1. Consumption equals personal expenditures on goods and services for all purposes except educational plus noninvestment outlays by government on goods and services for health. (The unadjusted data for the US is \$355.4 billion.)
2. Investment is defined as the sum of expenditures for (a) gross private domestic investment, net of investment in education facilities; (b) public construction other than that for education and defense facilities; (c) equipment purchased by government except that for education and defense; (d) defense stockpiling and defense-production expansion; (e) net exports of goods and services; (f) net military grants to foreign countries; and for the US, (g) state and local government expenditures for atomic energy development. (The unadjusted data for the US is \$78.8 billion.)
3. Defense as a component of GNP includes government purchases of goods and services for the military services, federal government expenditures on atomic energy development, and outlays on space research and technology. Defense excludes stockpiling activities and net military grants for foreign military assistance. (The unadjusted data for the US is \$55.5 billion.)
4. Education includes private and public expenditures on goods and services for education both for current use and for investment purposes. (The unadjusted data for the US is \$22.0 billion.)
5. Administration as a component of GNP is the residual left after all current expenditures for national defense, health, and education and all capital expenditures are subtracted from government purchases of goods and services. (There is no equivalent category for the unadjusted data for the US.)

^a Because of the well-known difficulties in using Soviet prices as a measure of resource burden, the shares of GNP in this table are based on GNP at factor cost. In calculating GNP at factor cost, 1955 end use weights have been revised from a market price basis to a factor cost basis by subtracting turnover taxes and adding amortization charges, implicit interest costs, agricultural land rent, and subsidies. These revised weights are then moved over time by indexes of the value of the various end uses in constant market prices.

^a This series for gross national product (GNP) is an acceptable series insofar as comparability in the monetary units of the individual countries is concerned. The series is inadequate, however, for international comparisons based on the conversion of GNP into a single currency using the various rates of exchange. Such international comparisons (based on rates of exchange) are of doubtful value because the rates do not adequately indicate relative purchasing power. The more correct series for comparison of GNP is to be found in Table 2, p. 2, above. The following current rates of exchange are presented for the purpose of quick conversion of the data into US dollars when no international comparison is to be made.

	Monetary Unit per US \$1
Belgium.....	Franc..... 0.020*

USSR.....	22.5*	45.5*	50.9*	57.3*	61.0*	13.3*

* An asterisk indicates that the data are unclassified.

^a The base year is 1955.

^b Data have been revised from the previous *Handbook*. Previous data were official Soviet statistics adjusted to agree with US definitions and were reduced, when necessary, to allow for overestimation of production data. Data, as now presented, have been adjusted only for the overestimation in the official statistics and are not necessarily comparable with US data. Including slaughter fats.

^c Including automobiles, light and heavy trucks, wheeled tractors for road haulage, special vehicles, and buses. Data for the US are factory sales, including parts shipped for assembly abroad.

^{*} An asterisk indicates that the data are unclassified.

^a Indexes for the US, France, Italy, the UK, and West Germany are value-added weighted indexes of intermediate and final products of industry. Industry includes manufacturing and mining and, in most countries, public utilities. The index for the UK includes construction, whereas the indexes for the other Western countries exclude construction. The indexes for the Communist countries are estimates of this Office—constructed as nearly as possible on the same basis as the indexes for Western countries—or other calculations accepted by this Office. The indexes for Rumania (for most years) and Yugoslavia are official calculations. The indexes for the Communist countries include manufacturing, mining, and public utilities.

^b The base year is 1955.

^c Excluding the Saar and West Berlin.

^d Index of gross values for individual commodities and branches aggregated by 1955 value-added weights. The three sectors covered—materials, machinery, and consumer goods—comprise 44.3 percent, 34.2 percent, and 21.5 percent, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of industrial production of the US Federal Reserve Board.

^e Indexes for Bulgaria, Czechoslovakia, Hungary, and Poland through 1960 are from private studies. The index for Rumania for 1958 and 1960-62 is an official calculation. All other index numbers are estimates of this Office.

^f Estimates of this Office computed by applying value-added weights to data for commodity production.

* An asterisk indicates that the data are unclassified.

^a These indexes are measures of the "gross" value of production of industry at constant prices. The gross value of production is, in general, the sum of the value of output of all industrial enterprises. The definition of industry in Communist countries includes not only manufacturing, mining, and public utilities as in most Western definitions of industry but also certain other activities (varying from country to country).

^b The base year is 1955.

^c Based on plan fulfillment data.

^d Based on the new Two Year Plan (1964-65).

^e Midpoint of the range of planned production for socialized industry for 1965 of 212 to 214.

Table 11

Gross Investment in Industry for the US and the USSR ^a
Selected Years, 1955-63

	1955	1958	1960	1961	1962	1963	Average Annual Rate of Growth, ^b 1956-63 (Percent)
US ^c							
Billion 1955 US \$	16.71	16.07	17.89	16.94	17.70	18.43	
Index 1955 = 100	100.0	96.2	107.1	101.4	105.9	110.3	1.2
USSR ^d							
Billion new rubles ^e (1955 prices)	8.00	10.80	13.72	14.31	15.18	15.90	
Index 1955 = 100	100.0	135.0	171.5	178.9	189.8	198.8	9.0

^a Comparability of the data is subject to varying problems of definition and interpretation. Among the problems that must be reckoned with are the relative efficiency of investment, the index number effect, the lag-lead time for investment completion, the relative pressures of demand upon supply in two heterogeneous economies, the problem of investment concentration, the classification of government expenditures for the US, and the ratio of net capital formation to gross capital formation. The indexes are useful, however, as an indicator of growth, although growth in gross investment in industry may not have brought about a corresponding growth in economic activity.

^b The base year is 1955.

^c Data for the US are for investment in new plant and equipment in the three categories of manufacturing, mining, and public utilities. Investment data in current dollars are from the *Survey of Current Business*, and the deflator used to derive the constant values is a weighted deflator based on implicit price deflators for producers' durable equipment and other new construction from *Economic Report of the President*, January 1964.

^d Industry in the USSR covers manufacturing, mining, and electric power. Urban distribution of electric power is excluded. The original investment data for the USSR included the Soviet category "Building Materials and Construction Industry." To eliminate the data for investment in the construction industry and to arrive at gross investment in industry, the following data (Million new rubles expressed in 1955 prices) were used:

	1955	1958	1960	1961	1962	1963
Gross investment in industry and construction ¹	8,249 ²	11,231	14,323	14,935	15,763	16,640 ³
Construction ⁴	248	434	601	628	582	740
Industry ⁵	8,001	10,797	13,722	14,307	15,181	15,900

¹ Unless otherwise indicated, data are from *Narodnoye khozyaystvo SSSR v 1962 godu*, Moscow, 1963, p. 434.

² Computed from data in *Kapital'noye stroitel'stvo v SSSR*, Moscow, 1961, p. 63-64.

³ Estimated by assuming industry's share in total investment remained approximately at the level of 1962.

⁴ Gross investment in construction is estimated to have been 30 percent during 1950-62 and 40 percent in 1963 of total gross investment in the combined building materials and construction industry.

⁵ Computed as a residual by subtracting gross investment in construction alone (line 2) from gross investment in industry and construction combined (line 1).

^e Because of the difficulties associated with evaluating the effectiveness of resource allocation for different economies in one currency and because of the problems associated with evaluating what a Soviet program would cost in the US (or what burden such a priced program would have on the Soviet economy), no attempt has been made to convert the ruble values into dollars.

Command and support.....	1.9	1.9	1.9	1.9	1.9	2.0
Total military expenditures.....	14.0	15.2	16.1	16.7	17.9	19.5
Of which:						
Military machinery.....	7.1	8.3	9.3	10.4	11.3	12.4
Of which:						
Procurement of missile systems, nuclear weapons, ground electronics, and research and development, including all expenditures for space.	3.2	4.7	5.4	6.6	7.5	8.3

^a These estimates of Soviet defense expenditures include costs of nuclear weapons, space, and military research and development, most of which is covered in Soviet budget accounts other than defense. Most of the estimates in this table are derived from detailed calculations of the estimated magnitude and cost of individual programs to deploy and operate elements of the Soviet military establishment. These calculations produce numbers that suggest a high degree of accuracy. In fact, however, these numbers are subject to considerable uncertainty and should not be considered as precise measures. The estimates, however, are as accurate and as comprehensive as the data available on 1 April 1964 permitted. If these estimates are to be used for further analysis of a definitive nature, this Office should be contacted to determine whether they have been supplemented or revised in any manner by additional intelligence information.

^b Expressed in 1955 prices.

^c Including estimated expenditures for reserve training, militarized security forces, and paramilitary training.

^d Including estimated research and development expenditures for military equipment, nuclear energy, and all space programs. These estimates are derived from analysis of published Soviet financial data and do not represent detailed calculations of the estimated magnitude and cost of individual programs.

^b Annual averages of monthly data. Data as presented are for civilian employment and differ from those presented in Figure 4, following p. 70. Data as presented in Figure 4 are for farm employment and include farm operators doing 1 or more hours of farm work and members of their families working 15 hours or more during the survey week without cash wages. Data in Figure 4 are based on a survey of farm payrolls conducted by the US Department of Agriculture. Data for the agricultural labor force are based on a household survey of the entire population conducted by the US Bureau of the Census. Data in Figure 4 are a more comprehensive count of agricultural employment and are considered to be more comparable to data presented for the USSR.

* An asterisk indicates that the data are unclassified.

^a Computations are based on estimates of internal purchasing power. Data, if converted to US dollars on the basis of a uniform par value of 4.762 rupees to US \$1, would be (in billion 1955 US \$) as follows: for 1955, 23.7; for 1958, 26.7; for 1960, 29.1; for 1961, 30.3; for 1962, 31.2; and for 1963, 32.4.

^b Excluding data for Sikkim and Kashmir-Jammu.

^c Including anthracite and bituminous coal but excluding brown coal and lignite.

^d Ingots only.

^e Estimated from planted acreage.

^f Including mixed yarn.

^g Including automobiles and commercial vehicles.

^h Unless otherwise indicated, data are for the year beginning 1 April of the stated year.

ⁱ Data are for the calendar year.

* An asterisk indicates that the data are unclassified.

^a Index of gross values for individual commodities and branches aggregated by 1955 value-added weights. The three sectors covered—materials, machinery, and consumer goods—comprise 44.3 percent, 34.2 percent, and 21.5 percent, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of industrial production of the US Federal Reserve Board.

^b Based on plan fulfillment data.

^c Based on the new Two Year Plan (1964-65).

^d Average annual employment. Data include the armed forces but exclude militarized security forces.

^e Metric tons of standard fuel. Standard fuel has a calorific value of 7,000 kilocalories per kilogram.

^f Estimated production for 1965.

^g Revised Plan for 1965.

^h Including blast-furnace ferroalloys.

ⁱ Estimated plan for 1965.

^j Including slaughter fats and poultry. Carcass weight, bone-in basis.

^k Data have been revised and differ from the previous *Handbook*. Previous data were official Soviet statistics adjusted to agree with US definitions and were reduced, when necessary, to allow for overestimation of production data. Data as now presented have been adjusted only for the overestimation in the official statistics and are not necessarily comparable with US data.

* An asterisk indicates that the data are unclassified.

^a Estimates of this Office computed by applying value-added weights to data for commodity production.

^b This "official" index of industrial production was calculated by chaining together annual Chinese Communist claims for the increase in the gross value of industrial production. These annual claims are overstated in varying degrees and are not based on a stable and consistent accounting and price system.

^c Excluding the armed forces.

^d Metric tons of standard fuel. Standard fuel has a calorific value of 7,000 kilocalories per kilogram.

^e Estimated data.

^f Including a negligible amount of brown coal.

^g Excluding coke made in beehive, clamp, native, and "small modern" furnaces.

^h Excluding production from "native furnaces."

ⁱ Including 4.72 million metric tons of steel made in small side-blown converters.

^j Including blast-furnace ferroalloys.

^k Including 4.16 million metric tons of "native iron."

^l Including 9.6 million metric tons of pig iron made in "small blast furnaces," of which 5.9 million metric tons were usable for steelmaking.

^m Including 13.4 million metric tons made in "small blast furnaces," of which 6.5 million metric tons were usable for steelmaking.

ⁿ Including tubers on a grain equivalent basis of 4 metric tons of tubers to 1 metric ton of grain.

^o Including sweet and Irish potatoes and other starchy tubers such as taro and cassava.

^p Including buffaloes. Data refer to the number of cattle for midyear for 1955 and for the beginning of the year for 1958-59.

^q The number of hogs that can be accounted for varies from 72 to 85 percent of the official number for 1955. Data refer to the number of hogs for midyear for 1955 and for the end of the year for 1958-59.

^r Carcass weight, bone-in basis; including poultry.

^s Estimated data.

* An asterisk indicates that the data are unclassified.

° Including immature ears of corn converted to a mature grain equivalent.

° Including nonfood as well as fooduse.

° Year-end population is used because the food consumption year runs from July through June and because the production in the calendar year is consumed in the last half of the year within which it is produced and the first half of the following year.

d Excluding trade.

Tabular Graphic

AGRICULTURE IN NEW LANDS OF THE USSR* 1954-63

TABLE 59

	SOWN AREA** (MILLION HECTARES)	YIELD** (CENTNERS PER HECTARE)	PRODUCTION (MILLION METRIC TONS)	PERCENT OF TOTAL PRODUCTION IN THE USSR
1954	4.3	10.5	4.5	5
1955	18.5	4.3	8	7
1956	26	9.6	25	22
1957	26	5.0	13	12
1958	26	8.8	23	18
1959	23	7.0	16	16
1960	26	6.9	18	18
1961	26	5.8	15	13
1962	25	6.8	17	15
1963	25	4.0	10	10

* The estimated production for the "new lands" does not represent the estimated total production from the new lands area.

** Estimates of this Office. Because most of the grain produced in the "new lands" is wheat, a centner per hectare is the equivalent of about 1.5 bushels per acre.

1963.....	175 to 180	+5.2	180 to 185	727*	248 to 254

* An asterisk indicates that the data are unclassified.

^a Including tubers on a grain equivalent basis of 4 metric tons of tubers to 1 metric ton of grain.

^b The effect of 1 metric ton of grain imported for food is much greater on the food situation than the effect of an additional ton of domestic production, which is reduced approximately 15 percent for feed, seed, and waste. A minus sign indicates net exports; a plus sign indicates net imports.

^c Including nonfood as well as food use.

^d Year-end population is used because the food consumption year runs from July through June and because the production in a calendar year is consumed in the last half of the year within which it is produced and the first half of the following year.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, excluding potatoes and soybeans. Unless otherwise indicated, data for the NATO and the Communist countries include, where produced, barley, corn, oats, rice, rye, and wheat. Data for the Communist countries also include, unless otherwise indicated, miscellaneous grains such as buckwheat, millet, sorghum, and mixed grains.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data for sorghum are included only for the US.

^c Data differ from that presented in the previous *Handbook* in which total grain included the grain equivalent of corn silage and forage, as well as grain corn. The series as presented herein includes corn harvested for grain only. Including sorghum, which amounted to 6.2 million metric tons in 1955 and 14.8 million metric tons in 1963.

^d Including pulses.

^e Midpoint of the range of planned production for 1965 of 164 million to 180 million metric tons.

^f Including barley, oats, rye, and wheat only.

^g Midpoint of the range of planned production for 1965 of 14 million to 16 million metric tons.

^h Including tubers on a grain equivalent basis of 4 metric tons of tubers to 1 metric ton of grain.

ⁱ Midpoint of the range of planned production for 1963 of 175 million to 180 million metric tons.

^j Including corn and rice only.

^k Oats only.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to meat on the basis of carcass weight, bone-in, and include beef, veal, pork, mutton, lamb, goat, carabao, and horse meat where produced but exclude offal, lard, and rabbit and poultry meat.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Data have been revised and differ from the previous *Handbook*. Previous data were official Soviet statistics adjusted to agree with US definitions and were reduced, when necessary, to allow for overestimation of production data. Data as now presented have been adjusted only for the overestimation in the official statistics and are not necessarily comparable with US data. Also including slaughter fats and poultry.

^d Including edible offal.

^e Live-weight basis.

^f Including poultry.

^g Plan data.

^h Probably including rabbit.

ⁱ Including data for Luxembourg.

^j Data are for 1962 and are included in the NATO total for 1963.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to beet sugar. Data are given in terms of the raw value of centrifugal sugar. Refined sugar is equal to approximately 90 percent of raw sugar by weight. Centrifugal, as distinguished from noncentrifugal, sugar includes cane and beet sugar produced by the centrifugal process and is the principal type of sugar moving in international trade.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Including cane sugar.

^d Including the refining of raw cane imports.

^e Midpoint of the range of planned production of sugar from sugar beets for 1965 of 9.25 million to 10.0 million metric tons. Before 1960, almost all sugar was produced from sugar beets.

^f Data are for the Azores and Madeira only.

^g Cane sugar only.

* An asterisk indicates that the data are unclassified.

^a Including, where produced, nitrogen fertilizers (in terms of nitrogen), phosphorous fertilizers (in terms of phosphoric anhydride), and potassium fertilizers (in terms of potassium oxide).

^b Tonnages refer to the nutrients expressed as nitrogen, phosphoric anhydride, and potassium oxide.

^c Estimated plan for 1965.

^d NATO totals include only data for the US and those NATO countries listed under "Other NATO Countries."

The years for the NATO data are "fertilizer years"—that is, in general, the year ending 30 June.

^e Data differ somewhat from those presented in previous years because of slight definitional differences.

^f Data are for 1961 and are included in the NATO total for 1962.

^g Data for the Saar are presumed to be included with West Germany.

Table 83

Production of Mineral Fertilizer, Gross Weight, for the US and the USSR
Selected Years, 1955-63

	Thousand Metric Tons					
	1955	1958	1960	1961	1962	1963
US ^a	20,100*	20,400*	23,000*	23,000*	24,200*	25,200*
USSR.....	9,669*	12,420*	13,867*	15,315*	17,300*	19,900*

* An asterisk indicates that the data are unclassified.

^a Estimated from mineral fertilizer consumption data in gross weight, on the presumption that the percentage differences between consumption and production for nutrient content would hold true for the relation between consumption in gross weight and production in gross weight.

Table 84

Production of Plastics ^a for the US and the USSR
Selected Years, 1955-63, and 1965 Plan

	Thousand Metric Tons						
	1955	1958	1960	1961	1962	1963	1965 Plan
US ^b	1,696* ^c	2,112*	2,844*	2,868*	3,335*	3,763*	
USSR.....	181*	258*	332*	404*	473*	589*	950* ^d

* An asterisk indicates that the data are unclassified.

^a Because of differences in definition and product mix, Soviet and US data on plastics are not strictly comparable. For the over-all category of plastics, however, there is enough similarity to permit broad comparisons.

^b Dry basis, excluding water, solvents, and other liquid diluents.

^c Perhaps not strictly comparable with later years.

^d Revised plan for 1965. The original plan was for 1.8 million metric tons.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to production of oven and beehive coke and exclude production of breeze coke.

^b Net production, excluding coke consumed by coking plants. NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Prior to 1963, foundry coke, not suitable for blast furnaces. Production in 1963 believed to be primarily metallurgical coke.

^d May include some high-temperature brown coal coke used for metallurgical purposes.

^e Data refer to metallurgical coke, but a large part of this "metallurgical coke" is produced in gas plants and is used with high-quality coke in charging blast furnaces.

^f Excluding coke made in beehive, clamp, native, and "small modern" furnaces.

^g Including breeze coke.

^h Data for the Saar are included with West Germany.

* An asterisk indicates that the data are unclassified.

^a NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data for NATO relate, as far as possible, to natural gas (net production) actually collected and utilized as fuel or raw material. They thus exclude gas used for repressuring, as well as gas flared, vented, or otherwise wasted, whether or not it has first been processed for the extraction of natural gasoline.

^b Data for the US are in terms of net marketed production and agree with the general definition for the NATO data. Data for the USSR are believed to refer to gross production less losses and waste. US gross production (less losses and waste) which would include gas returned to reservoirs in order to maintain horizon pressure (about 11 percent of gross production in 1962) would be as follows (billion cubic meters):

	1955	1958	1960	1961	1962
	310	354	411	423	442

A much smaller share of total production in the USSR is believed to be used for repressuring.

^c Data for the Communist countries are for gross production.

^d Revised plan for 1965. The original plan was for 149.8 billion cubic meters.

^e Including methane (dry) gas and wet gas from oilfields.

^f Data are for 1962 and are included in the NATO total for 1963.

^g Data are for 1962.

^h Including gas used for repressuring and wasted.

* An asterisk indicates that the data are unclassified.

^a Data refer to total (gross) production at generating centers (therefore including transmission losses and station use). (See footnote b, below.)

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.53 percent the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the total gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.

^o Revised plan for 1965.

^d Estimated plan for 1965.

^e Estimated data.

^f Plan data for 1967.

* Midpoint of the range of estimated production of 3.5 billion to 3.6 billion kilowatt-hours.

^b Data for the Saar are included with West Germany.

¹ Year ending 1 April.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." The metal content of the ore in the NATO countries and other Free World countries is as follows: Austria, Luxembourg, and the UK, 27 to 30 percent; Belgium, France, and West Germany, 31 to 34 percent; Italy, Portugal, Spain, and the US, 50 percent; Canada and Japan, 55 percent; Sweden and Turkey, 60 percent; and India, Norway, and Venezuela, 61 to 65 percent.

^c Excluding manganiferous iron ore containing 5 percent or more of manganese.

^d The metal content of the ore in selected Communist countries is as follows: USSR, in terms of dressed ore—54 to 55 percent of the ore; Communist China, 20 to 50 percent; North Korea, 40 to 50 percent; Albania, 50 to 55 percent (1 percent nickel); Bulgaria, 40 to 50 percent; Czechoslovakia, 34 percent; East Germany, 25 to 30 percent; Hungary, 28 percent; Poland, 30 percent; Rumania, 32 to 40 percent; Yugoslavia, 40 to 43 percent; and Cuba, 35 to 50 percent.

^e Revised plan for 1965.

^f Iron-nickel ore that is mined for its nickel content.

^g Shipments.

^h Data are for 1962 and are included in the NATO total for 1963.

ⁱ Including iron sand.

^j Including concentrates (about 1 million metric tons per year).

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to electrolytic and distilled (including redistilled) zinc produced from domestic and imported ores and scrap and other secondary materials. Production of remelted zinc is not included.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Including production from secondary smelters. Production of primary zinc in the US was as follows (in metric tons): 1955, 874,100; 1958, 708,700; 1960, 725,300; 1961, 768,200; 1962, 797,800; and 1963, 811,900.

^d Primary metal only representing 75 to 80 percent of total production. For example, total production in 1963 was estimated to be 532,000 metric tons.

^e Estimated plan for 1965.

^f Annual production consists of zinc produced from scrap except for 150 to 200 metric tons before 1962, 1,600 metric tons in 1962, 6,100 metric tons in 1963, and 16,000 metric tons estimated for 1965.

^g Estimated production for 1965.

^h Estimated plan for 1967.

Far East							
Communist China.	11.5*	110.0* ^d	N.A.	N.A.	N.A.	N.A.	

* An asterisk indicates that the data are unclassified.

^a Data refer to rolling mills; mechanical equipment for coke, blast, and smelting furnaces; mixers; crushers; grinding mills for ore and coal; agglomeration installations; and special hoist-transport mechanisms for metallurgical shops. Equipment for nonferrous shops is believed to be included but probably amounts to only a small percentage of the total physical volume. Data are not available for the US in terms of metric tons. Expenditures in the US in current US dollars for new machinery and equipment for blast furnaces, steel mills, and nonferrous metal-producing facilities are as follows: for 1950, US \$354 million; for 1955, US \$522 million; for 1956, US \$950 million; and for 1957, US \$1,331 million. Data for later years are not available.

^b Lower limit of the range of planned production for 1965 of 200,000 to 220,000 metric tons. The plan for 1965 is for rolling mill equipment only, which normally constitutes 50 to 60 percent of all metallurgical equipment produced in the USSR.

^c Rolling mill equipment only. Production data are not available for all metallurgical equipment.

^d Including large quantities of small-scale equipment not normally produced in other Communist countries.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to both private and public telephones in use that can be connected to a central exchange. Data for the Communist countries may differ from the previous *Handbook* because these data insofar as possible now refer to telephones in use. The previous *Handbook* carried telephone subscribers for most of the Communist countries.

^b Estimated number for 1965.

^c NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^d Data for the Communist countries include only telephones operated by the various civil departments of post and telecommunications and exclude telephones serviced by other functional ministries and the military.

^e Telephone subscribers.

^f Data are as of midyear.

^g Data are as of 31 March of the following year.

* An asterisk indicates that the data are unclassified.

^a Service to the subscriber is a two-way service in which a subscriber is provided with a teletype machine connected to a switchboard of a local subscriber telegraph exchange. The data differ from the previous *Handbook* because they now refer to domestic stations, whereas previously domestic subscribers were presented. For the Communist Countries the number of stations is generally about the same as the number of subscribers.

^b In the US the domestic subscriber telegraph network usually is known as TWX rather than TELEX.

^c Plan data.

^d Estimated number for 1965.

* An asterisk indicates that the data are unclassified.

^a Data refer to metalcutting machine tools, including power-driven machine tools defined as not supported in the hands of an operator when in use and designed to remove metal in the form of chips, and also include honing, lapping, grinding, electroerosion, and ultrasonic cutting machines.

^b Midpoint of the range of planned production for 1965 of 190,000 to 200,000 units.

^c Excluding a few types known to be produced in small quantities.

^d Including metalforming types that are estimated to be about 10 percent of the reported total.

^e Reported production by official sources are as follows: for 1958, 50,000 units; for 1960, 90,000 units; and plan for 1962, 60,000 to 65,000 units. Data appear to include many rudimentary types not reported before 1958.

^f Plan data for 1967.

Table 131

USSR.....	17.1* ^c	26.2*	29.9*	30.5*	33.3*	33.8*	36.2* ^d

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to power-driven metalforming machine tools defined as not supported in the hands of an operator when in use and designed to press, forge, emboss, hammer, extrude, blank, spin, shear, and bend metal into shape.

^b Including manually operated bending and forming machines and excluding spinning lathes.

^c Reported as excluding hand machines and shears.

^d In 1961 a new plan was drawn up that placed 1965 production at 55,000 units. Since that time, however, the USSR has reverted to the original plan of 36,200 units for 1965.

* An asterisk indicates that the data are unclassified.

^a Because of the difficulty of determining valid rates of exchange, data are not presented in terms of a common currency. Official parity rates should be used with caution because they have been established and maintained arbitrarily and do not necessarily reflect the true ratio for construction. For example, the estimated ruble-dollar ratio for construction in the USSR in 1955 prices is about 0.70 new ruble to US \$1.

^b Data include the state and cooperative sector, private housing construction, and construction-installation work performed by collective farms (excluding fishing artels).

^c Expressed in 1955 prices.

^d Value of state construction.

^e Deutsche Mark East (East German marks).

^f Not strictly comparable with later years, because of the price change in 1959.

* An asterisk indicates that the data are unclassified.

^a Data refer to the total housing space, including living rooms, bedrooms, dining area, and auxiliary space such as bathrooms, kitchens, closets, and inside hallways.

^b Data are computed from the number of housing starts during the given years; strictly speaking, therefore, the completions data are more accurate for interyear comparisons than for any given year. Housing starts were converted to total floorspace by converting to square meters on the basis of varying sizes of structures.

^o Data for 1955 differs from the previous *Handbook*. Previous data for 1955 were not consistent with the series for the later years and were therefore adjusted to make the series as comparable as possible.

^d Including 77 million square meters of urban housing and 15 million square meters of rural housing.

^e Data for urban housing are as follows: for 1955, 14.46 million square meters, and for 1958, 26.42 million square meters.

[†] Total area constructed during 1955-60.

^a Data refer, as nearly as possible, to all types of hydraulic cements used for construction.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Including portland, prepared masonry, natural, slag, and hydraulic lime cement.

^d Revised plan for 1965. The original plan was for 84.6 million metric tons.

^e Midpoint of the range of planned production for 1967 of 4.0 million to 4.5 million metric tons.

^f Estimated plan for 1965.

^g Excluding natural cement.

^h Data are for 1962 and are included in the NATO total for 1963.

ⁱ Data for the Saar are included with West Germany.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to net metric ton-kilometers and include all goods and livestock carried during the calendar year by trains other than plantation, industrial, forest, mining, funicular, and cable railroads but exclude service traffic, mail, and nonrevenue government stores. Data include domestic, import, export, and transit freight traffic. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign trade freight traffic carried through more than one country, however, is counted in each country. Data for the US specifically include revenue and nonrevenue freight traffic on Class I and II railroads.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Including performance of railroads owned jointly by Hungary and Austria and performance by narrow-gauge railroads for "limited public use."

^d Plan data for 1967.

^e Including service traffic.

^f Full carloads only excluding military traffic.

^g Government railroads only.

^h Data are for the year beginning 1 April.

ⁱ Including military and government traffic.

^j Excluding livestock.

^k Full carloads only.

^l Data are for the year beginning 1 July of the previous year.

^m Excluding Northern Ireland. Data include service traffic.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data refer to all goods and livestock carried during the calendar year by trains other than plantation, industrial, forest, mining, funicular, and cable railroads but exclude service traffic, mail, and non-revenue government stores. Data include domestic, imports, export, and transit freight traffic. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign trade freight traffic carried through more than one country, however, is counted in each country. Data for the US are in tons originated, thus giving a more realistic comparison with other NATO countries and with Communist countries.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Revised plan for 1965. The original plan was for 2,372 million metric tons carried.

^d Including performance of railroads owned jointly by Hungary and Austria and performance by narrow-gauge railroads for "limited private use."

^e Plan data for 1967.

^f Including service traffic.

^g Government railroads only.

^h Including through consignments between private and government railways.

SECRET

* An asterisk indicates that the data are unclassified.

^a Data include the performance of vessels of less than 1,000 gross register tons (GRT).

^b Including Caspian Sea, Danube River, and domestic coastal and intercoastal traffic.

^c Including both coastal and international freight traffic.

^d Estimated performance for 1965, based on planned size of the fleet and estimated length of haul.

^e Perhaps excluding the performance of some ships flying the Polish flag but under the control of the Chinese-Polish Shipbrokers Corporation. At the end of 1963, there were 17 of these ships, totaling 142,700 GRT. It is possible that the performance of one-half of these is included, but no definite information is available.

^f Coastal traffic only, carried in Chinese and chartered foreign ships.

^g Including both modern coastal and inland water traffic.

^h Coastal traffic only.

* An asterisk indicates that the data are unclassified.

^a Data include all types of locomotives of 1,000 horsepower or more. Data before 1962 possibly include some locomotives of lower horsepower but these cannot be broken out. Because of the lack of consistency, totals for the NATO and the Communist countries have been omitted. For data on diesel and electric locomotives, see Tables 155 and 156 (p. 165, below).

^b Units of 1,000 horsepower or more, except as noted in footnote a, above.

^c Data refer to locomotive units, put into service and exported, that are substantially new but may include a small amount of used equipment. Data have been revised and differ from the previous *Handbook*, in which data referred to new railroad-service locomotives, some of which were less than 1,000 horsepower. Data for gas turbine locomotive units which are included in the total for the US but are not included in Tables 155 and 156 (p. 165, below) are as follows (in units): 1955, 0; 1958, 25; 1960, 12; 1961, 8; 1962, 1; and 1963, 0.

^d Including only locomotives produced for government railroads.

^e Data refer to locomotives added to the operating stock by the British Transport Commission and to exports.

^f For the countries of the European Satellites, data may differ from the previous *Handbook*, in which data included diesel and electric locomotives of less than 1,000 horsepower.

* An asterisk indicates that the data are unclassified.
^a Data refer to ships of 1,000 gross register tons (GRT) or more. Data for the NATO countries include all combination passenger and cargo ships, whereas those for the Communist countries exclude passenger ships that have small cargo capacities.
^b Estimated plan for 1965.
^c NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data are as of midyear.
^d Including both private and government-owned fleets but excluding merchant ships owned by any military force.
^e Unless otherwise indicated, data are as of the end of the year.
^f Excluding the Caspian Sea fleet.
^g Data include a varying number of ships flying the Polish flag but under the control of the Chinese-Polish Shipbrokers Corporation. At the end of 1963, there were 17 of these ships, totaling 142,700 GRT.
^h Including coastal passenger ships.
ⁱ Data are as of midyear.

North Vietnam.....	Dong.....	3.7 ^g	3.7 ^g	N.A.	1.92
Albania.....	Lek.....	50	150	55.56	84.00

^a Official rates unless otherwise indicated. These rates are used for converting trade statistics.

^b Rates used for noncommercial transactions such as diplomatic, tourist and student expenditures, personal remittances, and the like. Some countries have special rates for tourists in addition to the noncommercial rate.

^o The unofficial rate actually used in East German accounting of foreign trade transactions. Official rates still listed, but not used, are 2.22 DME to US \$1 and 2.47 DME to 1 ruble.

^d Generally accepted conversion rates, with the rate of 2.46 being used in trade with the Free World and the rate of 4.0 in trade with the Communist countries. Because official rates have never been announced by Communist China, these conversion rates have been estimated and, therefore, represent only approximations of actual rates.

^e An approximate rate. Actual rates vary depending on the transaction involved and the currency being traded. Actual rates also appear to change from time to time.

^f A bank rate. North Korea has not announced an official relationship between the won and Free World currencies. This rate probably is used for noncommercial transactions.

^g A bank rate. North Vietnam has not announced an official relationship between the dong and Free World currencies. This rate probably is used for noncommercial transactions.
