ECONOMIC INTELLIGENCE
STATISTICAL HANDBOOK
1966

WARNING

This material contains information affecting the national defense of the United States within the meaning of the espionage laws, Title 18, USC, Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited by law.

DIRECTORATE OF INTELLIGENCE

ECONOMIC PROFILE[†], 1965

EUROPEAN NATO

LAND MASS: 2,880,000
square kilometers
INHABITANTS: 294.2 million
GNP: US \$ 480 billion

CANADA

LAND MASS: 9,976,000
square kilometers
INHABITANTS: 19.6 million
GNP: US \$ 50 billion

US

LAND MASS: 9,363,000
square kilometers
INHABITANTS: 194.6 million
GNP: US \$ 664.1 billion

CUBA[†]

LAND MASS: 115,000
square kilometers
INHABITANTS: 7.1 million
GDP: US \$ 3.05 billion
(1957 prices)

[†]NOTE: The data for gross national product (GNP) are for 1965 (in 1964 prices) converted to US purchasing power equivalents, except for India, Cuba, and North Vietnam. Data for India (in 1964 prices) and Cuba (in 1957 prices) are gross domestic product (GDP) for 1965 converted to US dollars using prevailing exchange rates. Data for Cuba are given in 1957 prices to minimize the inflationary effects during the last several years. Data for GNP for North Vietnam are for 1964. All data on inhabitants are for midyear 1965 and data on land mass are for the latest year available.

**EASTERN EUROPEAN
COMMUNIST COUNTRIES**
LAND MASS: 989,000
square kilometers
INHABITANTS: 100 million
GNP: US \$ 109 billion

USSR
LAND MASS: 22,272,000
square kilometers
INHABITANTS: 230.5 million
GNP: US \$ 304 billion

NORTH KOREA
LAND MASS: 122,000
square kilometers
INHABITANTS: 12.3 million
GNP: US \$ 2.6 billion

JAPAN
LAND MASS: 370,000
square kilometers
INHABITANTS: 98.0 million
GNP: US \$ 104 billion

NORTH VIETNAM†
LAND MASS: 159,000
square kilometers
INHABITANTS: 17.7 million
GNP: US \$ 1.6 billion

COMMUNIST CHINA
LAND MASS: 9,561,000
square kilometers
INHABITANTS: 755 million
GNP: US \$ 72 billion

INDIA†
LAND MASS: 3,263,000
square kilometers
INHABITANTS: 482.9 million
GDP: US \$ 48.4 billion

NO FOREIGN DISSEM

FOREWORD

1. Purpose and Scope

The *Economic Intelligence Statistical Handbook, 1966* provides statistics on the economies of the Communist countries and the countries of the North Atlantic Treaty Organization (NATO). Every effort has been made to review all pertinent sources, to provide the latest information available, to make the data reliable, consistent, and comparable, and to insure that the data are accurate, timely, useful, and significant.

The content and format of the *Handbook* have been revised to make possible more explicit and extensive comparisons. New tables and graphics have been added, and tables and graphics of marginal interest have been excluded.

In general, the data in the *Handbook* are for 1958-65. A summary table is presented for each of the Communist countries, selected NATO countries, India, and Japan. The data for Mongolia, because of their scarcity, are presented in a summary table but are not included in the individual commodity or aggregative tables. The graphics and tabular graphics are designed for use as visual aids. Footnotes have been used liberally throughout the *Handbook* to give definitions, exceptions, and methodology. Footnotes to the commodity tables give more detailed definitions of the data than those appearing for the commodities on the summary table for each country. Therefore, the footnotes to the commodity tables should be referred to when a complete description of the data shown is required. For convenience, unclassified tables of selected conversion factors and exchange rates for currencies of the NATO countries and selected Communist countries have been included after the *Table of Contents*.

2. Rounding of the Totals

In each table the data for the individual countries have been rounded consistently. Because of the limitations in the cumulative data, the totals have been rounded, with few exceptions, to three significant digits. In general, zeros appearing after

the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation.

Totals are not presented if missing data are believed to represent a significant part of the total. In general, data are not given for countries for which a significant amount of the data is not available. Because of rounding, components may not add to the totals shown.

3. Symbols

In the tables the abbreviation N.A. (not available) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation Negl. (negligible) is used when the magnitude of the data is less than half of the final unit employed for each table. The metric system is used throughout.

4. Classification of Data

The overall classification of the *Handbook* is SECRET/NO FOREIGN DISSEM. The unclassified data, indicated by an asterisk (*), may be official data of the country cited or may be unclassified estimates of this Office. Tables in which all of the data are unclassified have been identified accordingly. Classified data, however, frequently occur on the reverse of the page, and, therefore, caution should be exercised if pages are removed from this publication.

5. Sources

The data given for the most recent years are frequently preliminary and subject to revision. The data for the Communist countries are estimates of this Office, official data from the country cited, or estimates made by other organizations. The data for the NATO and other Free World countries are from publications of the United Nations and the Organization for Economic Cooperation and Development (OECD), from unclassified publications of the US Government or official publications of other individual countries of the Free World, or are estimates of this Office.

NO FOREIGN DISSEM

SECRET

NO FOREIGN DISSEM

6. *Terms*

Unless otherwise indicated, the term *Communist Countries* includes the Soviet Bloc, Communist China, North Korea, North Vietnam, Albania, Cuba, and Yugoslavia; the term *Soviet Bloc* includes the USSR and the Eastern European Communist countries (Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Rumania). The members of NATO are the United States, Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the United Kingdom, and West Germany.

Production data for the Saar before 1960 have been included in the NATO total; for 1960 and after, they have been included in the data for West Germany, unless otherwise indicated. Data for Alaska and Hawaii, when available, have been included in the total for the US. Data for any of the above country groupings for Communist countries may or may not include all of the countries listed above, depending on the situation for the goods or services listed. For example, some countries of the Soviet Bloc do not give aid to underdeveloped countries of the Free World and therefore are not included in the totals for the Soviet Bloc in tables on aid.

* An asterisk indicates that the data are unclassified.

^a For the individual European NATO countries, the ratios for converting gross national product (GNP) in national currencies at 1964 prices into 1964 US \$ on the basis of US purchasing power equivalents are derived from the 1950 ratios given in Milton Gilbert and Associates, *Comparative National Products and Price Levels*, OEEC, Paris, 1958, using the geometric mean of European and US weighted ratios. These 1950 ratios were moved to 1964 by applying the following factor: the derived price indexes for each European country for 1950-64 divided by a derived price index for the US for 1950-64. These price indexes were derived for each country by dividing the growth of GNP in current prices by the growth of GNP in constant prices. The ratios thus obtained were applied to the GNP values, given in the national currencies in 1964 prices. The total GNP for the European NATO countries is based on the estimate that the total GNP of the individual countries shown represents 95 percent of the total European NATO GNP, which is the approximate relationship derived from other sources. The values shown for the Communist countries have been calculated in a manner which makes them reasonably comparable with the values shown for the NATO countries.

^b The base year is 1958. Percentages were derived from unrounded data.

^c Including data for the Saar and West Berlin. The data for West Germany for 1960, excluding the Saar and West Berlin, is US\$ 92.2 billion in 1964 prices.

^a US market prices. Total Soviet gross national product (GNP) and the various end uses were converted to dollars not by the official rate of exchange but by the average purchasing power ratio of the dollar and the ruble calculated from actual or estimated prices paid for various goods and services in the two economies. For GNP as a whole and for each end use component of GNP, these average ratios (ruble-dollar ratios) were estimated by weighting individual price ratios by both US and Soviet expenditure weights. The geometric mean of the US weighted and Soviet weighted ratios was then used for the conversion of Soviet values into dollars.

The magnitudes for the Soviet end use components were calculated to measure quantity of output compared with the US but not the cost in resources. The share of total economic resources devoted to a particular end use or the share of total output originating in an individual sector (for example, agriculture or industry) in the USSR should be measured in internal ruble prices and costs. Agriculture, for example, alone uses 40 percent of the civilian labor force, or 48 million people, as a result of the inefficiency of that sector in the USSR.

The adjusted end uses of GNP are defined as follows:

1. Consumption comprises personal expenditures for goods and services for all purposes and noninvestment outlays by government for goods and services for health and education. (The personal consumption expenditures for the US are \$398.9 billion.)

2. Investment is defined (a) for both the US and the USSR as the sum of expenditures for gross private domestic investment; for public construction other than that for defense facilities; for equipment purchased by the government except that for defense; for defense stockpiling and defense-production expansion; for net exports of goods and services; and for net military grants to foreign countries and (b) for the US, as also including expenditures by state and local government for development of atomic energy. (The gross private domestic investment for the US is \$92.9 billion.)

3. Defense as a component of GNP comprises government purchases of goods and services for the military services, federal government expenditures on atomic energy development, and outlays on space research and technology. Defense excludes stockpiling activities, net military grants for foreign military assistance, and government sales. (The federal government purchases of goods and services for national defense, excluding purchases by NASA, for the US are \$49.9 billion.)

4. Administration as a component of GNP is the residual left after all current expenditures for national defense, health, and education and all capital expenditures are subtracted from government purchases of goods and services. (There is no equivalent category for the unadjusted data for the US.)

^b Based on unrounded data.

^c The sum of the end use components of Soviet GNP, valued in dollars, does not equal the dollar value of aggregate GNP, because of the use of average ruble-dollar ratios in converting from ruble values to dollar values. Nevertheless, the individual end use components were not adjusted to agree with the total, since the US-USSR comparisons shown are believed to give the best available description of relative size.

^a The individual series for gross national product (GNP) for the various countries are an acceptable series when the data are not to be used for international comparisons. The series are inadequate for international comparisons because they are based on the conversion of GNP into a single currency using rates of exchange at par value. Such international comparisons (based on 1965 rates of exchange) are of doubtful value because the rates do not adequately indicate relative purchasing power. The more correct series for the majority of the countries for comparison of GNP is to be found in Table 2, p. 2.

^b The base year is 1958. Percentages were derived from unrounded data.

Table 5

Percentage Distribution of Soviet Gross National Product, by End Use
(Adjusted Factor Cost) ^a
1955 and 1958-64

Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

^a Because of the well-known difficulties in using Soviet prices as a measure of resource burden, the shares of GNP in this table are based on GNP at factor cost. In calculating GNP at factor cost, 1955 end use weights have been revised from a market price basis to a factor cost basis by subtracting turnover taxes and adding amortization charges, implicit interest costs, agricultural land rent, and subsidies. These revised weights are then moved over time by indexes of the value of the various end uses in constant market prices.

^a Indexes for the NATO countries are value-added weighted indexes of intermediate and final products of industry. Industry includes manufacturing and mining and, in most countries, public utilities. Data for Belgium, France, Italy, Luxembourg, the Netherlands, the UK, and West Germany exclude the manufacture of food, beverages, and tobacco. The indexes for the Communist countries are estimates of this Office—constructed as nearly as possible on the same basis as the indexes for Western countries—or other calculations accepted by this Office. The indexes for the Communist countries include manufacturing, mining, and public utilities.

^b The base year is 1958.

^c Unadjusted for working days.

^d Excluding data for the Saar.

^e Index of gross values for individual commodities and branches aggregated by 1960 value-added weights. The three sectors covered—materials, machinery, and nondurable consumer goods—comprise 50.2 percent, 30.4 percent, and 19.4 percent, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of industrial production of the US Federal Reserve Board.

^f Estimates of this Office computed by applying value-added weights to data for commodity production. The data, particularly for years after 1959, are fragmentary and uncertain. Therefore the index should be regarded as providing only a tentative indication of the general level and trend in production during 1960-65.

^a The indexes of industrial production are estimates of this Office—constructed as nearly as possible on the same basis as indexes for Western countries— or other calculations accepted by this Office. The indexes include manufacturing, mining, and public utilities. The indexes for agricultural production are estimates of this Office—based on the gross production of crops minus seed, waste, and feed (including imported grain), and livestock products (including changes in livestock numbers) using FAO/OECD Western European regional price weights (1952-56 average).

^b The base year is 1958. Rates of growth in industrial production are derived from unrounded data.

* An asterisk indicates that the data are unclassified.

^a These indexes are measures of the "gross" value of production of industry at constant prices. The gross value of production is, in general, the sum of the value of output of all industrial enterprises. The definition of industry in Communist countries includes not only manufacturing, mining, and public utilities, as in most Western definitions of industry, but also certain other activities (varying from country to country).

^b The base year is 1958.

^c An increase of 15 percent was announced for 1964.

^d A planned increase of 11 percent was announced for 1965.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data are from the original Seven Year Plan (1959-65) and do not include later revisions.

^b The base year is the year before the first year of the stated period.

^c The official Soviet measure is based on a Marxist concept of national income and differs significantly from the concept used in Western market economies. For example, the Soviet measure excludes the value of services and overstates the contribution of industry by including all indirect taxes. The gross national product, of the USSR, however, was 45 percent of the US in 1958, and 46 percent in 1965.

^d Official "gross" value series.

^e Including production of gas from coal and shale. Table 110, p. 113, excludes production of gas from these sources.

^f The data used in the computation of the percentages for the US exclude gas for repressuring, but for the USSR include gas for repressuring.

^g Based on data for 1964.

^h Based on announced percentage increases applied to estimated data.

ⁱ Expressed in prices of 1 July 1955.

^j Trucks, buses, and passenger automobiles.

SECRET

Tabular Graphic

PERCENTAGE DISTRIBUTION OF DEFENSE EXPENDITURES BY MAJOR MISSION^a, IN THE US AND THE USSR, 1965^b

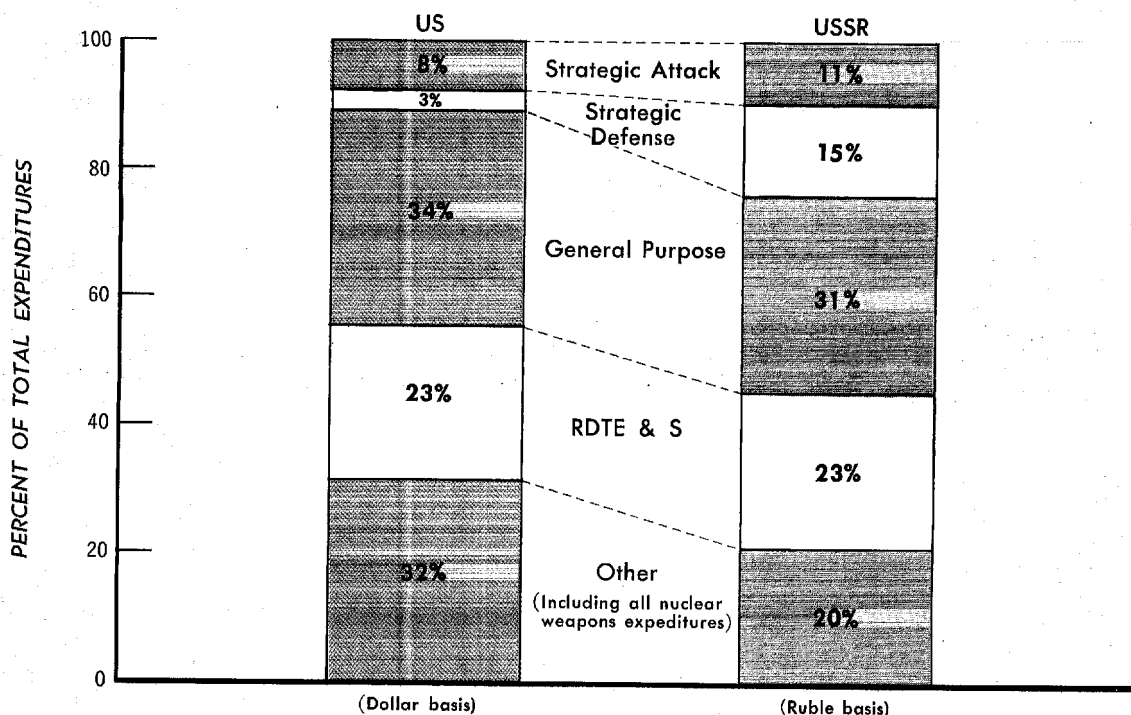

TABLE 19
Percentage Distribution of Defense Expenditures

	US (Dollar Basis) ^c	USSR (Ruble Basis) ^d
Strategic attack ^e	8%	11%
Strategic defense	3%	15%
General purpose	34%	31%
RDTE & S ^f	23%	23%
Other ^g (including all nuclear weapons expenditures)	32%	20%

a. All expenditures for nuclear weapons are aggregated under the "OTHER" category. Because detailed data on expenditures for US defense programs, by mission, do not exist, the US side of this comparison is on the basis of planned total obligational authority. Also, in the interest of comparability, military assistance and civil defense have been excluded from both sides.

b. US expenditures are for fiscal year 1965 and Soviet expenditures are for calendar year 1965.

c. Expressed in 1964 prices.

d. Based on new rubles expressed in 1955 prices.

e. "STRATEGIC RETALIATORY" is the designation used in the US.

f. It is not possible at this time to distribute estimated Soviet research, development, test, evaluation, and space programs (RDTE & S) expenditures by mission. Therefore, on the US side, all RDT & E for the respective programs have been included in RDTE & S. In addition, the Soviet nuclear energy RDT & E and space programs are covered conceptually by the data. Estimated expenditures by NASA for 1965 (US\$4.90 billion) and estimated expenditures for RDT & E programs by the AEC (US\$1.57 billion) have been included here.

g. On the US side, expenditures for general support, retired pay, reserve, national guard, and the nuclear energy program (excluding RDT & E) are included. On the Soviet side, expenditures for command and general support, reserve, militarized security forces, retired pay, and the nuclear energy program (excluding RDT & E) are included.

Table 20

Estimated Soviet Expenditures for Defense and Space, ^a by Mission
1958-65

	Billion New Rubles ^b							
	1958	1959	1960	1961	1962	1963	1964	1965
Mission								
Strategic attack	2.08	2.36	2.61	2.84	3.27	2.97	2.44	2.15
Strategic defense	1.90	2.01	2.27	2.22	2.42	2.30	2.63	2.94
Ground	4.33	4.04	3.64	3.27	3.39	3.59	3.60	3.77
Naval	1.62	1.71	1.48	1.43	1.63	1.68	1.71	1.63
Military transport aviation	0.62	0.66	0.72	0.77	0.77	0.78	0.76	0.70
RDTE & S ^c	1.69	1.92	2.31	2.66	3.00	3.50	3.88	4.26
Command and general support ^d	2.83	2.74	2.71	2.69	2.71	2.70	2.70	2.71
Total military expenditures	15.07	15.45	15.74	15.89	17.19	17.52	17.72	18.15
Of which:								
Military machinery	7.49	7.99	8.82	9.28	10.27	10.69	10.92	11.04
Of which:								
Procurement of missile systems, nuclear weapons, ground elec- tronics, and research and development, including all ex- penditures for space	3.28	4.18	5.00	5.60	6.38	6.66	6.71	6.86

^a These estimates conceptually include all outlays for personnel and other operating costs, procurement of all hardware used by the military establishment (including nuclear warheads), construction of facilities, military and nuclear research and development activities, and all space programs. Many of the funds required to cover these expenditures come from sources other than the budget category labeled "Defense" by the USSR. Most of the figures in the table are derived from detailed calculations of the estimated size and cost to deploy and operate individual program elements of the Soviet military establishment. The underlying calculations produce numbers that suggest a high degree of accuracy. In fact, however, these estimates are subject to considerable uncertainty and should not be considered as precise measures. Nevertheless, the estimates are as accurate and as comprehensive as the data available on 15 April 1966 permitted. If these estimates are to be used for further analysis of a definitive nature, this Office should be contacted to determine whether they have been supplemented or revised in any manner by additional intelligence information.

^b Expressed in 1955 prices.

^c Expenditures for research, development, test, and evaluation for all military programs, all nuclear energy programs, and all space programs. These estimates are derived from analysis of published Soviet financial data and do not represent detailed calculations of the estimated magnitude and cost of individual programs.

^d Expenditures for reserve training, militarized security forces, and paramilitary training, in addition to command and support for the active military establishment.

* An asterisk indicates that the data are unclassified.

^a Excluding the armed forces.

^b Annual averages of monthly data. Data are for civilian employment and differ from those presented in Table 148, p. 145. Data in Table 148 are for farm employment and include farm operators doing 1 or more hours of farm work and members of their families working 15 hours or more during the survey week without cash wages. Data in Table 148 are based on a survey of farm payrolls conducted by the US Department of Agriculture. Data for the agricultural labor force are based on a household survey of the entire population conducted by the US Bureau of Census. Data in Table 148 are a more comprehensive count of agricultural employment and are considered to be more comparable to data presented for the USSR, whereas data in this table are considered to be more comparable to data presented for the Communist countries as a whole.

^c Excluding militarized security forces.

* An asterisk indicates that the data are unclassified.

^a Based on gross domestic product data for 1960 that was moved forward with an index of current national income to 1964 prices and deflated by a similar index for constant national income. India does not publish gross national product data, and published series for gross domestic product do not extend beyond 1960. Data are converted at the official exchange rate.

^b Excluding data for Sikkim and Kashmir-Jammu.

^c Data are for the year beginning 1 April of the stated year.

^d Ingots only.

^e Estimated from planted acreage.

^f Mill and decentralized sector production.

^g Mill production only.

^h Excluding production for the military.

ⁱ Data are for the year beginning 1 April of the stated year.

^a Exports are domestic exports only, excluding reexports, and are valued f.a.s. Imports are imports for consumption only and are valued f.o.b., port of export. Data include exports to and imports from Estonia, Latvia, and Lithuania, which are treated separately in Department of Commerce data.

^b The minor differences between the totals shown on this table and those shown on Table 53, p. 53, are due to differences in definition.

^c Excluding US wheat shipped from a Canadian port, as reported by US grain inspectors, of 4,122,000 bushels valued at \$7,420,000. These shipments were part of a substantial quantity of wheat exported to Canada for storage and reexported to various countries. The final destinations were unknown at the time of export from the United States.

^d Data may include unrefined metal.

* An asterisk indicates that the data are unclassified.

^a Data for 1958-64 for exports of total petroleum, crude oil, and petroleum products and for exports to the Communist countries are official Soviet statistics. Data for the Free World are derived as residuals and include exports for which the importing country is not specified. Therefore, the values in this table will differ slightly from the sum of the data from Table 65, p. 65, and Table 67, p. 67. Cuba is included in the Free World in 1958-59 and in the Communist countries in 1960-65.

^b Estimated. Value data are based on constant 1964 average prices.

^a Nitrogen fertilizer (in terms of nitrogen), phosphorous fertilizer (in terms of phosphoric anhydride), and potassium fertilizer (in terms of potassium oxide).

^b The years for the NATO data are "fertilizer years"—that is, in general, the year beginning 1 July of the stated year.

^c Excluding nitrogen fertilizer.

^d Data are for 1962/63 and are included in the NATO total for 1963.

UNCLASSIFIED

Table 99
 Production of Mineral Fertilizer in the US and the USSR
 1958-65
 (In Terms of Soviet Statistical Reporting Units ^a)

	Thousand Metric Tons							
	1958	1959	1960	1961	1962	1963	1964	1965
US ^b	30,305*	31,609*	32,320*	35,106*	38,770*	44,237*	47,015*	53,157*
USSR	12,419*	12,916*	13,867*	15,322*	17,258*	19,935*	25,562*	31,300*

* An asterisk indicates that the data are unclassified.

^a For statistical purposes, Soviet production of fertilizer is usually reported as follows: nitrogen fertilizer is computed on the basis of fertilizer containing 20.5 percent nitrogen, potassium fertilizer on the basis of 41.6 percent potassium oxide, and most types of phosphorus fertilizer on the basis of 18.7 percent phosphorus pentoxide. In addition, total production includes an insignificant quantity of microfertilizer.

^b Data are based on US production given in pure nutrients and recomputed to conform to the Soviet method for expressing production. The years for US data represent "fertilizer years"—that is, the year beginning 1 July of the stated year.

Japan.....	356*	1,777*						

* An asterisk indicates that the data are unclassified.

^a NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data are for net production—that is, for gas actually collected and utilized as fuel or raw material. They thus exclude gas used for repressuring, as well as gas flared, vented, or otherwise wasted, whether or not it has first been processed for the extraction of natural gasoline.

^b Data for the US are in terms of net marketed production and agree with the general definition for the NATO data. Data for the USSR are believed to refer to gross production less losses and waste. US gross production (less losses and waste) which would include gas returned to reservoirs in order to maintain horizon pressure (about 11 percent of gross production in 1963) would be as follows (billion cubic meters):

1958	1959	1960	1961	1962	1963	1964
354	387	411	423	442	470	487

A much smaller share of total production in the USSR is believed to be used for repressuring.

^c Gross production.

^d Including methane (dry) gas and wet gas from oilfields.

^e Including data related to West Berlin, for which separate data are not available.

^f Including gas used for repressuring and wasted.

* An asterisk indicates that the data are unclassified.

^a Data are for total (gross) production at generating centers and therefore include transmission losses and station use. (See footnote b, below.)

^b Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.5 percent the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the total gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.

^o Before 1960, excluding data for the Saar.

^d Data are for the year beginning 1 April of the stated year.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data are for the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." The metal content of the ore in the NATO countries and other Free World countries is as follows: Austria, Luxembourg, and the UK, 27 to 31 percent; Belgium, France, and West Germany, 31 to 34 percent; Greece, Italy, Portugal, Spain, and the US, 46 to 50 percent; Canada and Japan, 55 percent; Sweden and Turkey, 60 to 61 percent; and India, Norway, and Venezuela, 57 to 62 percent. The metal content of iron ore in Denmark is not available.

^c Excluding manganiferous iron ore containing 5 percent or more of manganese.

^d The metal content of the ore in selected Communist countries is as follows: USSR, in terms of dressed ore, 55 percent of the ore; Communist China, 20 to 50 percent; North Korea, 40 to 50 percent; Albania, 50 to 55 percent (1 percent nickel); Bulgaria, 38 to 50 percent; Czechoslovakia, 34 percent; East Germany, 25 to 30 percent; Hungary, 24 to 28 percent; Poland, 30 percent; Rumania, 32 to 40 percent; Yugoslavia, 40 percent; and North Vietnam, 55 percent.

^e Plan data.

^f Based on an announced increase for 1965 of 24 percent applied to 1964 plan data.

^g Iron-nickel ore that is mined for its nickel content.

^h Shipments.

ⁱ Data are for 1964 and are included in the NATO total for 1965.

^j Data are for concentrates only and exclude titaniferous ores.

^k Excluding certain grades.

^l Merchant ores and concentrates.

^m Including data related to West Berlin, for which separate data are not available.

ⁿ Including iron sand and pyrites.

^o Including concentrates.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data are for refined metal.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data exclude Greece for all years except 1958.

^c Nickel recovered from refined domestic ore and nickel recovered as a byproduct of electrolytic refining of copper. Secondary nickel produced from nonferrous scrap is excluded.

^d Nickel content of oxides and sulfides.

^e Production of nickel in all forms for Canada (refined nickel, nickel in oxide produced, and recoverable nickel in matte exported) was as follows (metric tons): for 1958, 126,600; for 1959, 169,200; for 1960, 194,600; for 1961, 211,400; for 1962, 210,700; for 1963, 199,500; and for 1964, 211,500. Much of this production is exported for refining in other countries, especially the UK and Norway.

^f Excluding data for New Caledonia.

^a Unless otherwise indicated, data are for electrolytic and distilled (including redistilled) zinc produced from domestic and imported ores and scrap and other secondary materials.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Including production from secondary smelters. Production of primary zinc in the US was as follows (in metric tons): 1958, 708,700; 1959, 724,500; 1960, 725,300; 1961, 768,200; 1962, 797,800; 1963, 809,700; 1964, 865,500; and 1965, 911,900.

^d Primary metal only, representing slightly less than 80 percent of total production. For example, total production in 1965 was estimated to be 630,000 metric tons.

^e Annual production consists of zinc produced from scrap except for 100 to 200 metric tons before 1962, 6,100 metric tons in 1962, 6,100 metric tons in 1963, and 9,000 metric tons in 1964.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data are for steam and hydraulic turbines. Most production of turbines is for use in matched sets with generators for production of electric power. In addition, turbines are produced in single units for many purposes, including direct industrial drives, marine propulsion, and pipeline transmission.

^b Shipments of units 4,000 kilowatts and larger. Data are available only for turbines produced as integral units together with generators. Therefore, data for turbines and generators for the US are assumed to be the same. Some turbines are produced in single units but no data are available on this production.

^c Including a small number of gas turbines.

^d Steam turbines only.

^o Steam turbines of more than 500 kilowatts only.

* An asterisk indicates that the data are unclassified.

^a Because of the difficulty of determining valid rates of exchange, data are not presented in terms of a common currency. Official parity rates should be used with caution because they have been established and maintained arbitrarily and do not necessarily reflect the true ratio for construction. For example, the estimated ruble-dollar ratio for construction in the USSR in 1955 prices is about 0.70 new ruble to US \$1.

^b State sector, private housing construction, and construction-installation work performed by collective farms (excluding fishing artels).

^c Expressed in 1955 prices.

^d Excluding private construction.

^e Excluding capital repairs.

^f Deutsche Mark East (East German marks).

^g Socialized sector.

^h Expressed in 1961 prices. A currency reform of August 1965 revalued the lek at a ratio of 10 old lcks to 1 new lek.

* An asterisk indicates that the data are unclassified.

^a Total housing space, which includes living rooms, bedrooms, dining area, and auxiliary space such as bathrooms, kitchens, closets, and inside hallways.

^b Data are computed from the number of housing starts during the given years. Strictly speaking, therefore, the data on completions are more accurate for interyear comparisons than for any given year. Housing starts were converted to total floorspace by converting to square meters on the basis of varying sizes of structures.

^c Living space only.

^d New and reconditioned buildings.

^e Excludes communal housing.

^f Urban housing only.

^g Estimated average yearly construction based on announced performance for several years.

^h Official North Korean data for housing construction reported as 6.13 million square meters.

ⁱ Socialist sector only.

* An asterisk indicates that the data are unclassified.

^a The total area of the country and, unless otherwise indicated, including bodies of inland water.

^b Arable land includes land planted to crops (with double-cropped areas being counted only once); land temporarily fallow; temporary meadows for mowing or pasture; garden land; land under fruit trees, vines, and fruit-bearing shrubs; and rubber plantations.

^e One hectare equals 2.471 acres. Data are for various years during the period 1957-65.

^d Land area only.

^e Total agricultural area.

^f Land belonging to agricultural holdings exceeding 0.405 hectare (1 acre).

^g Continental sector only.

^h Including data for Kashmir-Jammu.

ⁱ Including data for the Balearic and Canary Islands.

^j Official Soviet data (22,402,200 square kilometers) include the White Sea (90,000 square kilometers) and the Sea of Azov (40,000 square kilometers), which are excluded by definition from the data shown.

^k Including only plowland and lands formerly cultivated but now idle.

* An asterisk indicates that the data are unclassified.

^a The years refer to the crop years—that is, the year ending 30 June of the last year of the 2 years stated.

^b Data are for cleaned rice, jowar, bajra, corn, ragi, small millets, wheat, and barley. Production data relate to harvests mostly completed within the stated calendar years and have been reduced by 12.5 percent to eliminate amounts used for feed, seed, and waste. Therefore, these data differ from those presented in Table 32, p. 32.

^c A minus sign indicates amounts reserved for stocks; a plus sign indicates additions to net availability from stocks.

^d Including data for Sikkim and Kashmir-Jammu. Midyear population is used because crop production in India occurs at a different period than most other Northern Hemisphere countries.

Table 151

Availability of Grain in Communist China
1958/59-1965/66

Consumption Year	Million Metric Tons			Million Persons at Year's End	Availability per Capita ^o (Kilograms)
	Production ^a	Net Trade ^b	Total Availability ^c

1965/66.....	170 to 175	+ 5.5	178 ^d	763*	233

* An asterisk indicates that the data are unclassified.

^a Production of grain is on a calendar year basis although it is consumed from July of one year through June of the next. Data include tubers on a grain equivalent basis of 4 metric tons of tubers to 1 metric ton of grain.

^b A minus sign indicates net exports; a plus sign indicates net retained imports.

^c Including nonfood as well as food use.

^d Based on the midpoint of production.

* An asterisk indicates that the data are unclassified.

^a Data exclude urban systems; plantation, forest, mine, industrial plant, underground, funicular, and cable railways; and short lines of little importance. Unless otherwise indicated, data are for all goods and livestock carried during the calendar year and exclude service traffic, mail, and nonrevenue government stores. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign trade freight traffic carried through more than one country, however, is counted in each country. Data for the US include express and mail and are specifically for revenue and nonrevenue freight traffic for a more realistic comparison with Soviet methods of reporting.

^b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

^c Including performance of railroads owned jointly by Hungary and Austria.

^d Including service traffic.

^e Full carloads only. Data exclude military traffic.

^f Government railroads only.

^g Including mail and passenger baggage. Data for 1958-64 are for the year beginning 1 April of the stated year.

^h Including military and government traffic.

ⁱ Excluding livestock.

^j Excluding express parcels.

^k Data are for the year beginning 1 July of the previous year.

^l Excluding data for Northern Ireland.

^m Including data for the Saar.

* An asterisk indicates that the data are unclassified.

^a Data exclude urban systems; plantation, forest, mine, industrial plant, underground, funicular, and cable railways; and short lines of little importance. Unless otherwise indicated, data are for all goods and livestock carried during the calendar year and exclude service traffic, mail, and nonrevenue government stores. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign trade traffic carried through more than one country, however, is counted in each country. Data for the US are in tons originated, thus giving a more realistic comparison with European methods of reporting.

^b NATO totals include only data for the US and these NATO countries that are listed under "Other NATO Countries."

^c Including performance of railroads owned jointly by Hungary and Austria.

^d Including service traffic.

^e Government railroads only.

^f Including data for Northern Ireland.

^g Before 1960, excluding data for the Saar. Data include through consignments between private and government railroads.

* An asterisk indicates that the data are unclassified.

^a Unless otherwise indicated, data are for all railroad locomotives of 1,000 horsepower or more. Because of the lack of consistency, totals for the NATO and the Communist countries have been omitted. For data on diesel and electric locomotives, see Table 184, p. 178, and Table 185, p. 179.

^b Data are for locomotive units, delivered domestically and exported, that are substantially new but also may include a limited amount of used equipment. Data for gas turbine locomotive units, which are included in the total for the US but are not included in Table 184, p. 178, and Table 185, p. 179, are as follows: 1958, 25; 1959, 7; 1960, 12; 1961, 8; 1962, 1; 1963, 0; 1964, 0; and 1965, 0.

^c Production for the government only. Data include rail motor vehicles.

^d Locomotives added to the operating stock by the British Transport Commission and exports.

^e Including nonmainline types.

* An asterisk indicates that the data are unclassified.
 * Unless otherwise indicated, data are for domestic telegrams.
 b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."
 c Including data for 1959 for Iceland.
 d Data for telegrams include domestic transmission of transoceanic and marine messages, which amounted to 10.9 million in 1964.
 e Data are for the year beginning 1 July of the previous year.
 f Data are for 1962.
 g Data are for the year beginning 1 April of the stated year.
 h Data for telegrams include international telegrams.
 i All telegrams sent by land are counted as domestic.
 j Including data for the Faeroe Islands and Greenland.
 k Including data for Algeria.
