Selected List Prices of Military Associated Equipment Exported by Communist Countries  
(Continued)

Equipment	Unit List Price (US \$)	Year	Recipient	Remarks
<u>Air Force</u> (Continued)				
AFA 35/50 aircraft camera	3,084	1960	Iraq	
SKT-53 gun trainer for TU-16	8,960	1961	Iraq	
TS-8 pilot's trainer	808,500	1964	India	
77BM-2M target aircraft	3,752	1961	Iraq	
1,060 x 300 tire, group	280	1966	Iraq	
900 x 300 tire, group	152	1966	Iraq	
Searchlight, APM-30	9,520	1961	Iraq	
Lights on ZIL-130, APM-90	10,631	1966	Iraq	
Lights on ZIL-130, LUCH-2	50,475	1966	Iraq	
Neon beacons on ZIL-130, KNS-IP	12,330	1966	Iraq	
Bomb cart, BTP-15	1,285	1960	Iraq	
Bomb cart, BTZ-44	1,079	1960	Iraq	
NKTL-3 ejection trainer	1,910	1960	Iraq	
STL-I gun trainer	3,875	1960	Iraq	
UTB-3M bombing trainer	37,492	1960	Iraq

Equipment	Unit List Price (US \$)	Year	Recipient	Remarks
<u>Air Force (Continued)</u>				
APU-BM 57mm rocket launcher	5,072	1966	Iraq	
AI-14 engine for YAK-18A	5,068	1961	Iraq	Weight 425 lbs.
AI-20K engine for AN-12	112,888	1966	Iraq	Weight 2,380 lbs.
ASH-82T engine for IL-14	23,500	1959	Indonesia	Weight 2,250 lbs.
ASM-82V engine for MI-4	22,720	1967	India	Weight 2,425 lbs.
D-20P engine for TU-124	174,968	1966	India	Weight 3,194 lbs.
RD-3M-500 engine for TU-16 KC	181,798	1962	Indonesia	
RD-3M engine for TU-16	163,240	1961	Iraq	Weight 6,835 lbs.
RD-IIF-300 engine for MIG-21C	114,240	1961-64	Iraq	Weight about 2,500 lbs.
RD-11FE-300 engine for MIG-21FL	129,332	1964-66	Iraq	Weight about 2,500 lbs. One spare engine ordered for every two aircraft purchased
RD-9b engine for MIG-19	47,200	1969	Iraq	Weight 1,650 lbs.
VK-1A engine for MIG-17	38,650	1959	Indonesia	The Chinese pack one engine per crate weighing 3,329 lbs. Engine alone weighs about 2,000 lbs.
VK-1F engine for MIG-17	33,000	1967	Nigeria	
RD-45 engine for MIG-15	25,480	1961	Iraq	
RD-45FA engine for MIG-15	28,280	1967	Nigeria	Weight about 2,000 lbs.
AL-7F-I engine for SU-7	191,968	1969	India	Weight about 5,000 lbs. One spare engine ordered for every two aircraft purchased
M-701 engine for L-29	2,133(C)	1964	Indonesia	Weight 725 lbs.
Propeller for YAK-18A	2,092	1961	Iraq	
AV-SO aircraft propeller	3,075	1961	India	
Main rotor for MI-4	10,724	1962	Iraq	
Tail rotor for MI-4	2,520	1967	India

6. Specific spare parts are seldom listed in the general arms agreements. While the list price of a weapon normally includes a certain quantity of spare parts, usually provision is also made in the general accord for a lump sum credit for unspecified spares. In the case of Iraq, this sum has ranged from 8% to 11% of the total value of its arms agreements with the USSR. In addition, spare parts often have been obtained under supplementary protocols to service equipment purchased earlier. Occasionally such orders for spares have been concluded on commercial terms.

7. The USSR estimates that some 2% of the value of a piece of ground forces equipment will have to be spent each year to maintain it according to Soviet standards. One recipient of Soviet military aid, however, has estimated that the yearly costs of spare parts for maintaining Soviet artillery and tanks are 4% of the initial cost of the equipment. Spare parts for aircraft and naval equipment are much more costly.

a. Where the supplier is a country other than the USSR, a letter designation appears after the price. The letter "C" denotes Czechoslovakia, "P" Poland, "H" Hungary, and "B" Bulgaria. An asterisk (\*) appearing after the price designates f.o.b. price, otherwise prices are c.i.f. List prices for weapons and associated equipment usually include a basic spare parts kit.

b. Weights are given in pounds and metric tons and do not include packing and crating unless specified.

SECRET

SECRET

SECRET

### Price Lists

1. Tables 1, 2, and 3 detail the export prices of Communist military equipment, ammunition, and military-associated equipment.\* Prices were obtained from documentary sources covering about one-fourth of the roughly 130 arms accords known to have been concluded since 1955 by Communist countries with less developed countries. No differentiation is made between prices of new and used equipment. In those instances where several prices were available for a single item, the most recent price is given first. In most cases, prices are c.i.f. (cost, insurance, and freight) at the major port of the recipient country.

2. The variation in price for individual items reflects freight costs, preferential treatment, age and condition of the equipment, and the tendency for list prices to decline over time. The normal practice for preferential treatment to certain clients by the USSR is to give a grant-in-aid discount off the list price. Preferential treatment in this form has ranged from a grant-in-aid discount for the entire military aid package, in the case of Cambodia, to no discount in the case of India. About 40% of the \$5.4 billion of military assistance extended thus far by the USSR has been aid in the form of grant-in-aid discounts.

### Costs of Spare Parts, Ammunition, and Support Equipment

3. Spare parts, ammunition, and support equipment make up a substantial part of any arms agreement. In estimating the total value of an agreement where only the composition and quantity of weapons are known, estimated weapons costs should be raised by an appropriate percentage to allow for the costs of associated materiel. The tabulation below shows the relative share of weapons versus associated materiel in the total cost of naval, air, and ground forces equipment under eight selected arms agreements. These specific agreements were chosen because each contained

\* *These export prices, which are expressed in US dollars, bear no known relation to production costs, either in the producing country or in the United States.*

detailed annexes which delineated prices and quantities, not only of weapons but also of accompanying support equipment, ammunition, and spare parts.

4. Costs of supplementary equipment and ammunition have accounted for about two-thirds of the total value of ground forces equipment specified in each agreement. Associated materiel also has made up at least one-fourth of the total value of equipment for air forces, with the exception of an early Soviet-Iraq agreement. The non-weapons share of aid to naval forces also has been substantial, although varying widely from agreement to agreement.

5. Moreover, ammunition alone accounts for by far the larger part of the cost of artillery. As shown in the tabulation below, ammunition made up between 56% and 79% of the value of various artillery systems covered in Soviet arms accords. Ammunition makes up an even larger share of the cost of rapid fire infantry weapons and mortars. In a number of cases, such agreements were followed by supplementary arms contracts which called for additional ammunition.

INTELLIGENCE HANDBOOK

Exports Of Communist Military Equipment  
To Less Developed Countries:  
A Catalogue Of Prices

Introduction

Since 1955 the USSR, Communist China, and the East European countries together have contracted to deliver some \$6 billion worth of military equipment to less developed countries in the Free World. By mid-1969, more than \$5.2 billion of this equipment, almost 90% of which was supplied by the USSR, had already been delivered, mostly under medium-term or long-term credit.

This handbook, which updates CIA/RR, A.ERA 63-6, *Exports Of Bloc Military Equipment To Non-Bloc Countries: A Catalogue Of Prices And Quantities*, October 1963, SECRET/NO FOREIGN DISSEM, contains a comprehensive price list of exports of Communist weapons, ammunition, and support equipment contracted for delivery to less developed countries. As such it can be used to estimate with a fair degree of confidence the value of a Communist nation's arms shipment where only the quantities and composition are known. This handbook also provides information on the value of ammunition and spare parts likely to accompany a particular delivery of weapons.

*Note: This handbook was produced solely by CIA. It was prepared by the Office of Economic Research and was coordinated with the Office of Strategic Research.*
