KEY TO ANNOTATIONS ON FIGURE 1

1. Unidentified SS inboard of fitting-out barge (LOA approx 250')*.
The ways previously used for the construction of submarines now appear to be empty and no further evidence of submarine construction activity is discernible at this time. A probable SS was observed on these ways  and is possibly the same unit that is now inboard of the fitting-out barge. 
2. Probable RIGA or KIANGNAN Class DE (LOA approx 300').
Only two of the three main batteries normally seen on these classes of DE can be identified. Other distinguishing features associated in the specific identification of these vessels cannot be discerned.
3. Unidentified possible combatant (LOA approx 220').
Identification is based on the relative long length/narrow width ratio associated with combatant-type vessels.

25X1

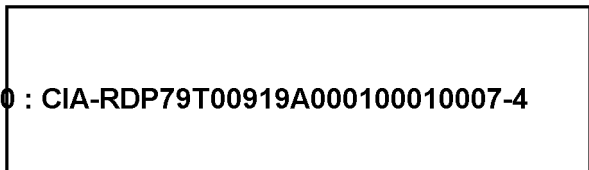

25X1

NOTE: Other activities on the building ways and in the graving docks cannot be determined from this poor quality photography.

* All measurements have been made by CIA/IAS.
