REPORT NO.

50X1-HUM

THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE ACT OF 1917, U.S.C. 50, AS AMENDED. NO TRANSMISSION OR THE REVELATION OF ITS CONTENTS TO ANY PERSON TO AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. INFORMATION OF THIS TYPE IS PRESENTED, HOWEVER, WITHOUT RECOMMENDATION BY THE FBI THAT IT BE WITHHELD FROM RELEASE TO THE RECEIVING AGENCY.

THIS IS UNEVALUATED INFORMATION FOR THE RESEARCH
USE OF TRAINED INTELLIGENCE ANALYSTS

SOURCE Russian Textbook, Electricity, Optics, Nuclear Physics, Ministry of Higher Education of USSR, 1947 (SIB 52358 -- Translation specifically requested.)

TABLE OF CONTENTS FOR

PHYSICS COURSEVolume II. Electricity, Optics, Nuclear Physics

Compiled by

Professor S. M. Rytov, Professor V. L. Levshin
Professor Ye. L. Poyntberg, Professor L. V. Grocher
Under the Editorship of
Academician N. D. Papalchuk

Issued by the Ministry of Higher Education of the USSR as a textbook for higher technical school and physics-mathematics departments of universities.

Moscow, Leningrad
1947

TABLE OF CONTENTSPart A. ELECTRICITY

by S. M. Rytov

I. Introduction

- A. Pre-Maxwell Period in the Study of Electricity
- B. Maxwell's Theory
- C. Particles of Electricity
- D. Electron Theory
- E. Electromagnetic Field
- F. Relationship between the Basic Micro- and Macroscopic Representations
- G. Conductors

- 1 -

CLASSIFICATION CONFIDENTIAL

50X1-HUM

H. Dielectrics

II. Electrical Field

- A. Electrostatics
- B. Coulomb's Law. Units of Charge
- C. Intensity of an Electrical Field
- D. Lines of Force
- E. Equilibrium of Electricity in Conductors
- F. Electrostatic Induction of Charges
- G. Polarization of Dielectrics
- H. Polarization, Dielectric Constant, and Electric Induction
- I. Electric Field in a Uniform Dielectric
- J. Induction Current. Gauss's Theorem
- K. Field of a Charged Sphere, Cylinder, and Plane

III. Potential. Energy of an Electric Field

- A. Work of Electrical Power
- B. Potential
- C. Units of Potential
- D. Surfaces of Equal Potential
- E. Relation between the Intensity of a Field and a Difference of Potentials
- F. Capacity
- G. Units of Capacity
- H. Capacity of a Flat Condenser
- I. Connection of Condensers in Series and in Parallel
- J. Energy of an Electrical Field. Storage of Energy
- K. Ponderomotive Forces of an Electric Field
- L. Electrometers

IV. Direct Current

- A. Conditions in the Formation of a Current
- B. Strength of a Current. Units of Current Strength
- C. Ohm's Law
- D. Units of Resistance
- E. Density of a Current
- F. Distribution of Potential in a Circuit
- G. Kirchhoff's Law
- H. Some Applications of Kirchhoff's Law
- I. Joule Effect
- J. Conversion of Energy in a Circuit
- K. External Field of Conductors

V. Electric Current in Metals

- A. Electric Conductivity
- B. Ohm's Law
- C. Change of the Resistance with Temperature
- D. Superconductivity
- E. Relation between Thermal Conductivity and Electrical Conductivity
- F. Joule-Lenz Law
- G. Thermionic Emission
- H. Differences of Contact Potentials
- I. Thermoelectric Effects. Seebeck Effect

VI. Electric Current in Electrolytes

- A. First- and Second-class Conductors. Ion Conductivity
- B. Dissociation of Molecules in Solutions. Ostwald's Law
- C. Mobility of Ions. Ohm's Law for Electrolytes
- D. Electrolysis. Secondary Chemical Reactions
- E. Faraday's Law
- F. Charge of an Electron
- G. Galvanic Elements
- H. Polarization of Electrodes. Normal Elements
- I. Storage Batteries

VII. Electric Current in Gases

- A. Electric Conductivity of Gases
- B. Dependent Electric Conductivity in High Pressures
- C. Dependent Electric Conductivity in a High Vacuum. Vacuum Tubes
- D. Cathode Rays
- E. Independent Electric Conductivity. Ionization Potential
- F. Discharge at High (Normal) Pressures. Corona Discharge
- G. Discharge in Rarefied Gases

VIII. Magnetic Field

- A. Preliminary Remarks
- B. Magnetic Charges
- C. Intensity of a Magnetic Field. Units of Intensity
- D. Biot-Savart Law
- E. Examples of the Magnetic Field of Currents
- F. Lorentz Force
- G. Determination of a Specific Charge of an Electron according to the Deflection of Cathode Rays in Electrical and Magnetic Fields
- H. Ponderomotive Forces of a Magnetic Field
- I. Loop Having a Current Flow in a Magnetic Field
- J. Ponderomotive Interaction of Currents
- K. Circulation of the Intensity of a Magnetic Field
- L. Magnetic Field of a Solenoid

IX. Magnetic Field in Materials. Magnetism

- A. Magnetization of a Body
- B. Magnetic Induction. Intensity of a Field in Magnetic Materials
- C. Para-, Dia-, and Ferromagnetism
- D. Magnetization of Para- and Diamagnetics
- E. Magnetic Field of a Current in a Homogeneous Magnetic Material
- F. Theory of a Magnetic Field, Based on the Hypotheses on Magnetic Charges
- G. Permanent Magnets and Solenoids
- H. Magnetic Field in a Heterogeneous Medium. Magnetic Induction Current
- I. Ponderomotive Interaction of Currents and Magnets
- J. Magnetism of the Earth
- K. Magnetic Hysteresis
- L. Magnetic Circuits

X. Electromagnetic Induction, Quasi-stationary Currents

- A. Electromagnetic Induction
- B. Generation of an Electromotive Force in a Moving Conductor in a Magnetic Field
- C. Electromotive Forces of Induction and Ponderomotive Forces
- D. Loop Rotating in a Magnetic Field
- E. Alternating Current
- F. Induction in Stationary Conductors
- G. Quasi-stationary Currents
- H. Mutual Inductance
- I. Self-inductance
- J. Electrokinetic Energy
- K. Foucault Currents
- L. Current in a Circuit with Resistance and Inductance
- M. Effective Strengths of a Current, Electromotive Force, and Voltage
- N. Power of an Alternating Current
- O. Inductive Coupling of Two Circuits Having Resistances and Self-inductances
- P. Rotating Magnetic Field

XI. Maxwell Theory

- A. Basic Laws of Electromagnetic Effects
- B. Displacement Current
- C. Alternating Current in an Open Circuit
- D. Concluding Remarks

XII. Electric Oscillations

- A. Quasi-stationary Current in a Capacitive Circuit
- B. Circuit with Capacity, Inductance, and Resistance
- C. Free Electric Oscillations in the Absence of Resistance
- D. Damped Free Oscillations
- E. Forced Oscillations, Resonance
- F. Resistance of a Circuit to an Alternating Current
- G. Self-oscillating systems, Oscillator Tube
- H. Amplifier Tube

XIII. Electromagnetic Waves

- A. Radiation of Electromagnetic Waves
- B. Hertz Antenna, Wave Band of the Radiator
- C. Current Produced by Electromagnetic Energy
- D. Pressure of Electromagnetic Waves
- E. Discovery and Study of Electromagnetic Waves
- F. Wireless Communication Systems of Electric and Magnetic Measurement Units

Part 5. OPTICS**XIV. Introduction**

by V. L. Levashin

- A. Nature of Light
- B. Speed of Light
- C. Electromagnetic Theory of Light and Different Types of Electromagnetic Radiation
- D. Fundamental Photometric Concepts and Units

- 4 -

CONFIDENTIAL

CONFIDENTIAL

CONFIDENTIAL

50X1-HUM

CONFIDENTIAL**XV. Interference of Light**

by V. L. Levshin

- A. Coherence of Waves
- B. Fresnel's Mirror
- C. Interference of Light in Passing through Layers of Materials of Various Thicknesses
- D. Newton's Rings
- E. Vertical Light Waves
- F. Interference Devices and Methods of Applying Them

XVI. Diffraction of Light

by V. L. Levshin

- A. Fresnel's Diffraction and Fraunhofer-Schwerd's Diffraction
- B. Fresnel's Zones
- C. Some of the Simplest Cases of Fresnel's Diffraction
- D. Fraunhofer's Diffraction. Diffraction from One Slit
- E. Diffraction from Several Parallel Slits
- F. Diffraction Grating and Diffraction Spectra
- G. Resolving Power of Diffraction Gratings
- H. Diffraction from Volume Grating. Diffraction of X-rays
- I. Dispersion of Light
- J. Rainbow

XVII. Geometric Optics

by V. L. Levshin

- A. General Outline and Fundamentals
- B. Mirrors
- C. Refraction of Light by a Flat Edge between Two Media
- D. Refraction of Light by the Edge of a Surface
- E. Thick Lenses and a System of Several Lenses
- F. Defects of a Lens
- G. Optic Instruments

XVIII. Diffraction in Optical Instruments

by V. L. Levshin

- A. Diffraction Theory of the Microscope
- B. Diffraction Effect in Telescopes

XIX. Dispersion of Light

by V. L. Levshin

- A. Nature of Dispersion Effects and Their Description
- B. Theory of Dispersion
- C. Monochromatic Light and the Actual Width of Spectral Lines
- D. Group Speed
- E. Characteristics of the Dispersion Ability of Materials. Direct View Prisms and Achromatic Prisms
- F. Spectrum Instruments

XX. Polarization of Light

by V. L. Levshin

- A. Fundamental Polarization Effects and Laws
- B. Dual Refraction
- C. Interference of Polarized Rays
- D. Rotation of the Surface of Polarization

XXI. Optics of Moving Bodies and the Special Theory of Relativity

by S. M. Rytov

- A. Question of the Movement of the Ether
- B. Fizeau's Experiment. Doppler Effect
- C. Michelson's Experiment

- 5 -

CONFIDENTIAL**CONFIDENTIAL**

CONFIDENTIAL

50X1-HUM

CONFIDENTIAL

- D. Principle of Relativity of Classical Mechanics
- E. Principle of Relativity and Electrodynamics
- F. Fundamental Postulates of the Special Theory of Relativity
- G. Coincidence of Remote Events
- H. Lorentz Conversion. Most Important Consequence of the Special Theory of Relativity

XXII. Quantum Optic Effects by V. L. Levshin, Ye. L. Feynberg

- A. General Remarks
- B. Compton Effect
- C. Photoelectric Effect (Photoeffect)
- D. Selective Photoeffect. Internal Photoeffect
- E. Application of Photoeffect
- F. Chemical Action of Light
- G. Combinational Scattering of Light

XXIII. Radiation and Absorption of Light by V. L. Levshin, Ye. L. Feynberg

- A. Concept of Levels of Energy. Origin of Linear, Band, and Continuous Spectra of Radiation
- B. Thermal Radiation
- C. Luminescence
- D. Atomic Emission and Luminescent Analysis
- E. Fluorescent Sources of Light
- F. Spectra of Absorption

XXIV. Physiological Optics, Photometry, and Colorimetry by V. L. Levshin

- A. Bases of the Visual Process
- B. Sensitivity of the Human Eye to Light
- C. Young-Helmholtz Theory of Color
- D. Resultant Colors
- E. Color of Bodies
- F. Adaptation. Duration of Light Impression. Talbot's Law
- G. Correct Illumination
- H. Photometer
- I. Characteristics of Color. Colorimeter and Spectrophotometer

XXV. Structure of the Atom by Ye. L. Feynberg

- A. Component Parts of the Atom
- B. Difficulties of the Classical Theory of the Atom
- C. Wave Properties of the Electron
- D. Wave Functions and Equations of Schrodinger
- E. Relationship of the Indeterminacy and Structure of the Atom
- F. Bohr's Model of the Atom
- G. Periodic System of Elements
- H. Characteristic Roentgen Rays

Part 6. NUCLEAR PHYSICS by I. V. Groshev

XXVI. Radioactivity

- A. Radioactivity
- B. Radioactive Transmutation. Law of Radioactive Discharge
- C. Methods of Studying Radioactivity
- D. Spectra of Radioactivity

- 6 -

CONFIDENTIAL

CONFIDENTIAL

CONFIDENTIAL

CONFIDENTIAL

50X1-HUM

- E. Radioactive Equilibrium. Radioactive Families
- F. Practical Application of Radioactive Materials
- G. Dispersion of Alpha Particles. Nuclear Model of the Atom
- H. Rule of Displacement. Isotopes

XXVII. Atomic Nucleus

- A. Artificial Transmutation of Elements
- B. Neutron and Its Properties
- C. Positron
- D. Structure of the Atomic Nucleus
- E. Defect of Mass
- F. Artificial Radioactivity
- G. Theory of the Structure of the Atomic Nucleus according to Bohr
- H. Fission of Uranium Nuclei
- I. Atomic Energy and Its Utilization
- J. Cosmic Rays
