TABLE OF CONTENTS FOR
"POWDER METALLURGY"

M. Yu. Bal'shin

This book is designated as a textbook for students of mechanical and metallurgical higher schools and as a reference book for engineers working in various branches of machine construction and metal processing.

TABLE OF CONTENTS

	Page
I. Introduction	
Fundamental concepts	5
Role of metal powder products in modern industry	6
Advantages of powder metallurgy	8
Factors limiting application of powder metallurgy	10
Brief historical information	11
Scientific basis of powder metallurgy	16
II. Metal powders	
A. Methods for making metal powders	
Mechanical crushing of solid metals	18
Granulation and atomization of molten metal	26
Oxide reduction	27
Electrolysis	29

50X1-HUM

	<u>Page</u>
B. Studying the metal powders	
Structural elements of powders	30
Powders as a conglomerate of particles	34
Properties and technical control of powders	36
Influence of powder properties on properties of finished products	41
III. Preparation of powders	
Classification of powders	43
Mixing	45
Preliminary treatment of powders	47
IV. Pressing	
A. Technology and equipment	
Proportioning and filling	48
Pressing dies	49
Presses	59
Different variations of pressing	61
B. Processes occurring in pressing	
Modification of structure	63
Contact phenomena	66
Pressure	70
Phenomena observed after pressure release.	89
Elastic aftereffect.	91
Mechanical properties of pressed products	104
Electric conductivity of pressed products	105
Defects of pressing	105
Work of pressing	105
V. Sintering	
A. Equipment and technology	
Furnaces	107
Protective atmosphere	110
B. Processes occurring in sintering	112
Sintering processes of a single metal	116

	<u>Page</u>
Effect of conditions on sintering processes and on properties of sintered materials	128
Sintering of multicomponent systems	145
Defects of sintered products	155
VI. Hot pressing	157
VII. Variations of metalloceramic technology	
Additional thermal and mechanical treatment of sintered products	165
VIII. Properties of metalloceramic materials	
Properties of porous materials	176
Properties of compact sintered metals and alloys	181
Technical control of metalloceramic products	183
IX. Metalloceramic materials	
A. Composition features specified by metalloceramic technology	186
B. Components of metalloceramic materials	
Iron and its alloys	188
Copper and its alloys	192
Low-melting metals (mercury, lead, tin, antimony, cadmium, zinc)	193
Light metals (aluminum, magnesium, beryllium)	194
Metals of the iron group (nickel and cobalt)	195
Precious metals (silver, gold, metals of the platinum groups)	195
Refractory metals (tungsten, molybdenum, tantalum, niobium)	196
Other metals	197
Nonmetallic components	198
X. Metalloceramic antifriction materials	
A. Porous bearings	200
B. Compact antifriction materials	214
C. Antifriction materials with nonmetallic components	217
XI. Friction materials	219
XII. Superhard alloys and diamond-metal compositions	
A. Superhard alloys	222

	<u>Page</u>
Composition and properties of metalloceramic superhard alloys	222
Industrial application of metalloceramic superhard alloys	228
B. Diamond-metallic compositions	234
XIII. Metalloceramic parts	
General information	236
Comparison of metalloceramic technology with ordinary methods of manufacturing machine parts	244
Parts manufactured by methods of powder metallurgy	246
XIV. Various porous materials and parts	
Filters	247
Other porous materials and details	250
XV. Electrotechnical materials and parts	
Employment of powder metallurgy in production of incandescent lamps and vacuum tubes	253
Metalloceramic materials in electric resistance furnaces	255
Copper-graphite brushes	256
Contact materials	257
Other electrotechnical materials	260
XVI. Magnetic materials	
Magnetic-dielectric products	262
Pure magnetic metalloceramic materials	264
Magnetic metalloceramic parts	264
XVII. Application of metalloceramic materials for military purposes	
Cores of armor-piercing projectiles and bullets	268
Metalloceramic rotating bands	269
XVIII. Other types of metalloceramic production	
Application of powder metallurgy for welding	270
Corrosion-resistant materials	271
XIX. Economics and development prospects of powder metallurgy	
Literature	278
