

6 June 1969

25X1A

I was glad to hear from you and I am quite envious of your opportunity to relocate wherever you and circumstances coincide. I sincerely hope that you and your family will be pleased by whatever outcome you get.

Our present project is going well - - but agonizingly slow. We have a way to take into account observable interactions -- such as OR junctions -- and to do so while achieving optimized tasking, although our current problem has very few taskable systems in it. I am still a little worried about secondary maximums, though, since I am not able to prove their non-existence. On the other hand, we have been unable to get the current program to converge on a secondary maximum yet.

We expect to have our final report ready by near 1 July 1969 and frankly, I expect a small hiatus for about a month while the next major push is defined. That leaves me somewhat up in the air in forecasting the future as of now. But believe me that we all enjoyed working with you and I will certainly contact you if our next job is of potential interest to you.

With best regards from the entire group.

Sincerely,

25X1A
