MEMORANDUM FOR: [   ]

SUBJECT   : KEP Data Processing Conventions

1. In the course of developing the programs for processing KEP data, we need to define lists of allowable data items within groups (e.g., the specific product types which may be entered). This is so that a machine edit can be made on input data to insure it is valid.

2. These lists of allowable data items are by no means "locked in". They can be changed at will. Still it is helpful to start with a good set.

3. Attached are lists for product types, producing components, sensor/techniques and tasking programs. Would you please look them over for additions or deletions. Unless I hear otherwise I will give a copy to [   ]   STA on Wednesday.

[   ]   STA
