THIS IS UNEVALUATED INFORMATION

This report is the result of a joint collection effort of the Air Force, the Army and CIA, and is disseminated in accordance with the provisions of NSCID No 7.7

25X1

1.

2. At first my training consisted of regular infantry basic training, which slowly branched into AAA training. After basic training, our training consisted of the nomenclature of the 85 mm AAA gun, disassembly and assembly and dry firing. Field training consisted of overnight and three day field problems, with particular emphasis on gun emplacement and dry firing. We had one field training exercise that lasted for two and one-half months. For this exercise we were allocated 257 rounds of live ammunition ^{UNCODED} for four guns (85 mm AAA) in my battery. We fired problems with this live ammunition and found it to be approximately three percent defective. The defects were splitting of the shell casings and the premature bursting of the shell. The shell casings were made of steel. The condition of the weapons in my battery was excellent, as we were required to maintain them at a high standard.

25X1

3. After basic training I was assigned to "S" (cover for battery). The only type of duty I performed was adjusting the time fuze of the projectile, thereby controlling the height of burst.

On file is an organizational chart of the AAA Regiment - CONFIDENTIAL.

4. During 1953 there was a big cutback or release of personnel from the regiment, and all the men that were volunteers were released. Approximately 50 percent of the personnel was released. The remainder was absorbed by an artillery unit.

25X1

5. I know of one Soviet with the rank of Colonel who was an advisor to the regiment, but other than this fact I know nothing more about him.
