Comments:

[Redacted comment block]

25X1

\*\* The terms ore (Erze) and matter (Masse) are used interchangeably in reporting outgoing shipments from the uranium mines.

[Redacted comment block]

\*\*\* A train load of wheel assemblies refers to the shipments of a train load of standard gauge trucks. These go to the Polish-USSR border, primarily to Brest-Litovsk, and are used to transport damaged Reichsbahn cars now being returned to the DDR in accordance with a recent agreement. The trains are of varying lengths, but usually run at about 100 axels.

\*\*\*\* New refrigerator cars or new passenger coaches are transported as a full train of 120 axels. The train is usually made up of 7 cars, on the average, of Soviet gauge trucks on which the new rolling stock is mounted at Brest-Litovsk, one car for train crew and guard (two or three axels), and an average of 24 new passenger coaches or refrigerator cars each of four axels.
