SOURCE: [Redacted]

Available at the CIA Library is a copy of a file containing preliminary designs, correspondence, blueprints, etc., for the construction of a development department for flow machinery (Stroemungsmaschinen) of all types (steam; water, and combustion turbines; turbocompressors; ventilators) on the site of the former high pressure test area (Hochdruckprueffeld) of the Dresden Turbine Factory (VEB Turbinenfabrik Dresden). This new department was to develop equipment not only for the East German power program but also for export purposes. Up to and including 1955, it was envisaged that approximately 8,000,000 DME would be required; for 1956-1957, some 7,000,000 DME more would be necessary. It was hoped that this factory would bring East German flow machinery construction up to that of other nations.

Attachment available at the CIA Library (1 set of documents in German, 56 pages)
