UNIT DECLASSIFICATION/RELEASE INSTRUCTIONS ON FILE

Copper Production

1. The business recession in Cuba, which started about the first of 1952 and hit its stride in July 1952, continued into the first quarter of 1953 with no indications of general improvement. The boom in mining has been the one exception. It has continued at an unusually high rate during the first quarter of 1953. Mining sources report great activity in copper exploration.
2. Minas de Matahambre in Pinar del Rio Province supplied almost the entire national output of copper ores and concentrates during the first quarter of 1953, as in previous years.
3. Several new companies have started copper exploration, but they are not expected to contribute more than three per cent to the total 1953 production. Only one or two show signs of becoming copper producers within the next nine to 12 months.
  - (a) One is Cia. Occidental Minera Bosch, which has holdings next to Matahambre in Pinar del Rio Province. This concern has the backing of a wealthy and prominent industrialist [not identified]. If its production does get underway, it should not exceed 10,000 tons in 1953.
  - (b) A remote possibility as a copper producer during 1953 is the old Christina Mine in Oriente Province. This mine has produced in the past. Two US citizens [not identified] promoting mining in Cuba are reported busy trying to get the mine back into production. Observers believe that the interest shown in this mine, and the search for capital to exploit it, indicate that a new vein has been uncovered.
4. Average Annual Copper Production [year not indicated]:

Ore: 284,907 long tons  
Concentrates: 54,414 long tons  
Copper content: 39,589,971 lbs.

-2-

6. The entire Cuban production of copper ores and concentrates was exported to the US during 1951 - early 1953.
7. Cuba produces no blister or electrolytic copper.
8. In 1951 Cuba imported 7,000 tons of blister and electrolytic copper from the US. During 1952 Canada supplied all Cuba's imports of blister and electrolytic copper.
9. Cuba imports about 180,000 lbs of copper alloys per annum.
10. Cuban copper scrap exports are estimated at 1,700,000 lbs per annum. Exports of brass and bronze scrap are estimated at 400,000 lbs per annum. The US takes nearly 90% of Cuban scrap exports. The UK takes about 10%. Cuba imports no copper scrap because it has such a large surplus. About 300,000 lbs copper scrap are used for local needs. About 800,000 lbs brass and bronze scrap are used for local needs.
