~~SECRET/SECURITY INFORMATION~~

COUNTRY: Bolivia

SUBJECT: Radioactive Material at Catavi Mine 25X1A2g

PLACE ACQUIRED:

Date acquired: 25X1A6a

Date of Info: 1952 25X1X6

Source:

1. About two years ago (1951) we sent to the US some samples of material from the Catavi Mine in Bolivia which proved to be highly radio active.
2. The veins containing this materials are about two inches wide and cut across the N 30° E tin veins in a porphyry mass at right angles.
3. Besides myself there is only one man who knows about the radio active nature of these bands. He is a Polish geologist known as ZOUBITSKI (phonetic spelling) who returned to Bolivia from Poland after the nationalization of the mines.
