SOURCE: [redacted]

1. Situated in an isolated area between Etyek and Soskut, Hungary, is an underground airplane parts warehouse. This project was built in 1936-37 by a private contractor, Eketetzky-Boray, by direction of the Hungarian Minister of Defense. 50X1

2. The warehouse is of iron and concrete construction. [redacted] the floor and walls are of four layers of asphalt and the pillars are iron and concrete. My guess is that the size is approximately 15 meters long and 50 to 60 meters wide. The warehouse was built to house approximately a hundred dismantled planes. It could be entered from both Etyek and Soskut vicinity.

3. The warehouse was built in great secrecy. The only reason I know anything about it is that my colleague, [redacted] contractor, asked for my professional opinion on a friendly basis as to whether the method utilized in overcoming seepage of water was the correct one. However, I had nothing to do with the construction and I have no knowledge as to what use was made of this warehouse during World War II. 50X1
