A Reference Aid

This publication is prepared for the use of US Government officials, and the format, coverage, and content are designed to meet their specific requirements. US Government officials may obtain additional copies of this document directly or through liaison channels from the Central Intelligence Agency.

Requesters outside the US Government may obtain subscriptions to CIA publications similar to this one by addressing inquiries to:

Document Expediting (DOCEX) Project Exchange and Gift Division Library of Congress Washington, D.C. 20540

or: National Technical Information Service 5285 Port Royal Road Springfield, VA 22161

Requesters outside the US Government not interested in subscription service may purchase specific publications either in paper copy or microform from:

Photoduplication Service Library of Congress Washington, D.C. 20540

or: National Technical Information Service 5285 Port Royal Road Springfield, VA 22161 (To expedite service call the NTIS Order Desk (703) 487-4650

Comments and queries on this paper may be directed to the DOCEX Project at the above address or by phone (202-287-9527), or the NTIS Office of Customer Services at the above address or by phone (703-487-4660). Publications are not available to the public from the Central Intelligence Agency.

# Handbook of Economic Statistics, 1982

A Reference Aid

Research for this report was completed on 1 September 1982

Handbook of Economic Statistics, 1982

### **Purpose and Scope**

The Handbook of Economic Statistics, 1982, provides statistics for selected non-Communist countries and all the Communist countries.

In general, the data in the *Handbook* are for 1960, 1965, 1970, 1975, and 1977-81. Data for the Communist and non-Communist countries have been adjusted, when necessary, to achieve comparability and therefore may differ from data presented in the original sources. Footnotes have been used liberally to give definitions, exceptions, and methodology. The base year for average annual rates of growth is the year prior to the stated period.

### Rounding of the Totals

The totals have been rounded, with some exceptions, to three significant digits. Because of rounding, components may not add to the totals shown. Totals are not presented if missing data are believed to represent a significant part of the total. In general, zeros appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation.

### Symbols

The abbreviation NA (not available) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation NEGL (negligible) is used when the magnitude of the data is less than one-half of the final unit employed for each table.

### Sources

The data given for the most recent years are frequently preliminary and subject to revision. The data for the Communist countries are official data from the country cited, CIA estimates, or estimates made by other organizations. The data for the non-Communist countries are from publications of the United Nations, the Organization for Economic Cooperation and Development (OECD), publications of US Government agencies, unclassified publications of other international organizations or individual countries, or are estimates of this Office.

### Terms

Unless otherwise indicated, the term Communist Countries includes the USSR, the countries of Eastern Europe, China, Albania, Cuba, Kampuchea, Laos, North Korea, Vietnam, and Yugoslavia; the term Eastern Europe includes Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Romania. The term European Community includes Belgium, Denmark, France, Greece, Ireland, Italy, Luxembourg, the Netherlands, the United Kingdom, and West Germany. The term developed countries includes the European Community, Austria, Finland, Iceland, Israel, Liechtenstein, Portugal, Malta, Norway, Spain, Sweden, Switzerland, Turkey, Australia, Canada, Japan, New Zealand, the Republic of South Africa, and the United States. The term Organization for Economic Cooperation and Development (OECD) includes all the developed countries, except Liechtenstein, Malta, Israel, and the Republic of South Africa.

"Approved For Nelease 2007/01/05 . GIA-NDF 05-00000N00010004000 F

The Big Six includes Canada, France, Italy, Japan, the United Kingdom, and West Germany. The Big Seven includes the United States and the Big Six.

Except for economic aid data, the term *less* developed countries includes the following:

- All independent countries of Africa except the Republic of South Africa.
- All independent countries of East Asia except Japan.
- All independent countries in Latin America except Cuba.
- All independent countries in the Middle East and South Asia, except Israel and Turkey.
   Except for Cyprus, no country in either Eastern or Western Europe is in the LDC grouping.
   Except for Hong Kong, no territory that is a possession, trust, or protectorate is included in the LDC grouping.

The definition of *less developed countries* for economic aid conforms to that used by the Development Assistance Committee (DAC) of the OECD and other aid agencies and includes the following non-Communist countries:

- All independent countries of Africa except the Republic of South Africa.
- All countries of East Asia except Hong Kong and Japan.
- Malta, Portugal, and Spain in Europe.
- All independent countries in Latin America, except Cuba.
- All countries in the Middle East and South Asia.

Totals for the country groupings may or may not include all of the countries listed above, depending on the commodity or services listed.

<sup>a</sup> Soviet per capita consumption as a share of US per capita consumption. Shares are the geometric mean of comparisons carried out in constant 1976 dollars and rubles. Comparisons were based on purchasing power parities (ruble/dollar ratios) calculated for 1976 from a large sample of prices of goods

and services in the two countries. Relative levels for 1976 were extended backward and forward on the basis of indexes for each component in constant prices.

<sup>b</sup> Preliminary.

Table 7 Production of Selected Consumer Goods in the US and USSR

<sup>&</sup>lt;sup>a</sup> Data for the non-Communist countries were converted from national currencies by using the 1981 Par Rate/Market Rate factors.

be See footnote a of Table 12 for an explanation of the data. Figures for 1965, 1975-77 are from I. Edwards, M. Hughes, J. Noren, "US and USSR: Comparisons of GNP," in US Congress, Joint Economic Committee, The Soviet Economy

in a Time of Change (Washington, D.C., 1979). Data for other years were derived by moving 1976 Soviet GNP in dollars (geometric mean) through time by indexes of Soviet GNP in 1976 established ruble prices. This shortcut procedure gives results that are quite close to those obtained through the more complex procedures used for the benchmark years of the study—1955, 1965, 1975-77. A detailed

discussion of estimating Soviet GNP in 1976 US dollars is available in the study cited above.

avanage in the study cited above.

<sup>c</sup> The dollar values of gross national product are not official figures. They are estimates based on Western concepts and procedures, which compare as closely as possible to values published by Western countries.

a For the individual OECD countries, the ratios for converting GNP in national currencies at 1981 prices into 1981 US dollars on the basis of purchasing power equivalents are derived from the 1970 ratios in A System of International Comparisons of Gross Product and Purchasing Power, published for the World Bank by The Johns Hopkins University Press, Baltimore and London, 1975, p. qusing the geometric mean of foreign and US weighted ratios. These 1970 GDP parities were moved to 1981 by applying the following factor: the derived price index for each OECD country for 1971-81 divided by a derived price index for the United States for 1971-81. These price indexes were derived

for each country by dividing the growth of GNP in current prices by the growth of GNP in constant prices. The ratios thus obtained were applied to the GNP values, given in the national currencies in 1981 prices

Inus obtained were approximational currencies in 1981 prices.

§ For the individual European OECD countries, the ratios for converting GNP in national currencies at 1981 prices into 1981 US dollars on the basis of US purchasing power equivalents are derived from the 1950 ratios in Milton Gilbert and Associates, Comparative National Products and Price Levels, OEEC, Paris, 1958, using the geometric mean

of European and US weighted ratios. These 1950 ratios were moved to 1981 by applying the following factor: the derived price index for each European country for 1951-81 divided by a derived price index for the United States for 1951-81. The ratios thus obtained were applied to the GNP values, given in the national currencies in 1981 prices.

• Converted at US purchasing power equivalents in approxi-

converted at US purchasing power equivalents in approx mately the same manner as the data for the European countries.

d Based on 1981 prices.

Table 12

Gross National Product, by End Use, in the US and the USSR, 1981

<u> </u>	Billion 1976 US \$ a		USSR as a Percent of US
	US	USSR	
GNP	1,967.1	1,056.3 b	54
of which:			
Consumption	1,395.3	563.5	40
New fixed investment	241.0	368.1	

<sup>a</sup> US data in market prices. Total Soviet GNP and the various end uses were converted to dollars not by the official rate of exchange but by the average purchasing power ratio of the dollar and the ruble calculated from actual or estimated prices paid for various goods and services in the two economies. For GNP as a whole and for each end-use component of GNP, these average ratios (ruble-dollar ratios) were estimated by weighting individual price ratios by both US and Soviet expenditure weights. The geometric mean of the US-weighted and Soviet-weighted ratios was then used for the conversion of Soviet values into dollars. The above GNP data should not, therefore, be used in conjunction with Soviet foreign trade data appearing in Tables 63-65. These latter tables use official foreign exchange rates to derive dollar values for trade; we have yet to estimate the value of

Soviet foreign trade in terms of actual purchasing power, which would allow for an estimate of the share of foreign trade in Soviet national income.

The magnitudes for the Soviet end-use components were calculated to measure quantity of output compared with the United States but not the cost in resources. The share of total economic resources devoted to a particular end use or the share of total output originating in an individual sector (for example, agriculture or industry) in the USSR should be measured in internal ruble prices and costs.

The identified end uses of GNP are defined as follows:
(1) Consumption includes personal expenditures for goods and services for all purposes and noninvestment outlays by government for goods and services for health and education.
(2) New fixed investment is defined as the sum of expenditures for gross private domestic investment net of inven-

tories; for public construction other than that for military facilities; and for equipment purchased by the government except that for defense. Since part of new fixed investment in the United States is capital repair, one-half of Soviet expenditures on capital repair is included in Soviet new fixed investment.

Other uses of GNP include defense, space, research and development, inventory change, administration, net exports, and a statistical discrepancy. The total value for these expenditures cannot be derived for the USSR by subtraction, however.

b The sum of the end-use components of Soviet GNP, valued in dollars, does not equal the dollar value of aggregate GNP, because of the use of average ruble-dollar ratios in converting from ruble values to dollar values.

a Preliminary.

Table 20

counting takes place. In addition to inflation in the official indicator from this source, disguised inflation also enters the index through new-product pricing, where minor product improvements result in a new-product price that is substantially higher than can be justified by either improved quality or increased production costs. Because output of these "new" products grows from a small base, their rates of growth will proceed at a higher rate than those of "old" products.

Adjusted indexes of industrial production—parallel to those

used by the Federal Reserve Board for measuring US industrial output—are constructed in order to circumvent most of these distortions, that is, price-weighted samples of several final products form output indexes for various industrial components and these component indexes are combined into an aggregate index for industry by use of value-added weights.

1970=100

b The official indexes purportedly measure changes in the gross value of industrial production. In general, the gross value of production equals the sum of the value of output of all industrial enterprises. As a result, since both intermediate and final goods are included in the value of output of each enterprise, industrial products are double-counted. If, as the evidence suggests, intermediate product (for example rolled metal) increases relative to final product (for example machine tools) inflation of output from increased double-

c An official index is not published.

d An adjusted index is not available.

a Indexes for the non-Communist countries are value-added weighted indexes of intermediate and final products of industry. Industry includes manufacturing, mining, and, in most countries, public utilities. The indexes for the Communist countries are estimates of CIA (see Table 20 for detailed explanation)—constructed as nearly as possible on the same basis as the indexes for Western countries-or other calculations accepted by CIA. The indexes for the Communist countries include manufacturing, mining, and public utilities. 

<sup>&</sup>lt;sup>b</sup> Preliminary.

c Index of gross values of output for individual commodities and branches are aggregated by 1970 value-added weights. The three sectors covered—materials, machinery, and non-durable consumer goods—constitute 49.66 percent, 32.36 percent, and 17.98 percent, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of US industrial production of the US Federal Reserve Board.

d CIA estimates for 1960-75 were computed by applying value-added weights to data for commodity production. The data are fragmentary and uncertain; therefore, the index should be regarded as providing only a tentative indication of the general level and trend in production. The index for 1977-81 follows the trend for reported gross value of industrial output.

<sup>&</sup>lt;sup>a</sup> Except for the United States, data are from the United States Arms Control and Disarmament Agency, World Military Expenditures and Arms Transfers, based on the ratio of military expenditures to GNP at current market

prices. Military expenditures are for current and capital expenditures to meet the needs of the armed forces, including expenditures of national defense agencies for military programs; expenditures for the military components of such

mixed activities as atomic energy, space, and research and development; military assistance to foreign countries; and expenditures on paramilitary forces where they contribute substantially to a country's military capabilities.

a Implicit price index obtained from a comparison of indexes of goods sold in the retail trade network in constant and in current prices. The current price index is based on the values of total retail and collective farm market sales in current prices regularly published in Soviet statistical abstracts. The index in constant prices is derived from the goods components of the CIA index of total consumption. A more complete explanation of the methodology and a discussion of

the relative merits of an "official" or "alternative" price index are contained in "Soviet Economy in a New Perspec-tive," US Congress, Joint Economic Committee, 14 October 1976, p. 631.

b Calculated differently from that for the USSR; the official index of personal consumption in current prices was deflated by a calculated index of personal consumption in constant prices. An explanation of the methodology used to calculate personal consumption is presented in T. P. Alton, "Index of Personal Consumption in Poland, 1937 and 1946-1967," Occasional Papers of the Research Projection National Income in East Central Europe (NY: L. W. International Financial Research, Inc., 1973).

Price indexes are calculated from official figures for total consumption of the population, including estimates of health and education expenses.

and education expenses.

a Average exchange rate for the year. Some countries also have special exchange rates for noncommercial transactions, such as diplomatic, tourist, and student expenditures and for personal remittances.

b The unofficial rates actually used in East German accounting of foreign trade transactions. The official rate is 2.05 deutsche marks to the dollar.
c Since January 1976, Hungary has expressed the value of

its foreign trade in domestic forints rather than diviza forints.

d End of year rate. Noncommercial rate through 1977; 1978 is a "special" rate for March 1978 as reported.

a Because of the well-known difficulties in using Soviet established prices as a measure of resource burden, the shares of GNP in this table are based on GNP at factor cost. In calculating GNP at factor cost, 1970 end-use weights have been revised from an established price basis to a factor

cost basis by subtracting turnover taxes and profits and adding implicit amortization and capital charges and subsidies. These revised weights are then moved over time by <sup>b</sup> Preliminary.

- indexes of the various end uses in constant prices.
- c Including consumption of food, soft goods, durables, personal services, and personal and government outlays for education and health.
- d Including machinery and equipment, construction and other capital outlays, and net additions to livestock.

<sup>&</sup>lt;sup>a</sup> The construction portion of gross fixed investment is reported in standard project costs ("estimate prices" in Soviet terminology) of 1 January 1976. Investment in machinery and equipment is in wholesale prices of 1 January 1973. Other capital outlays are for surveys, designs, technical documentation, and the like. Their valuation in investment statistics has never been described in Soviet sources.

Before 1976, Soviet statistical publications reported investment in prices of 1 January 1969. Official Soviet price indexes show only small changes in construction costs and equipment prices between 1969 and 1976. The USSR has yet to release figures in 1976 prices for total investment in 1960, and for investment by sector in 1960 and 1965. Data for these years in 1969 prices were converted to 1976 prices

by comparing investment in old and new prices for those years where data are available in both sets of prices.

b Preliminary.

c Computed as a residual; includes investment in nonferrous metallurgy, timber, paper, woodworking, and miscellaneous other branches of industry.

Based on CIA estimates rather than Soviet official series. The latter are believed to contain an upward bias in rates of growth because of double-counting and disguised inflation. The branch indexes shown above are formed by combining a sample of products in which intrabranch purchases have been excluded. The indexes for industrial materials,

consumer nondurables, and total industrial production are formed by combining the component branch indexes using 1970 value-added weights.

b The base year is the year prior to the stated period. Rates of growth are derived from unrounded data.
c Preliminary.

Approved For Neicase 2007/01/05.

a Including all countries trading with the Soviet Union on a hard currency basis as of 1 January 1980.
b The importance of hard currency trade is understated in Soviet statistics because of the favorable prices the USSR extends to CEMA countries.

Official East European statistics. Trade with the Communist countries was derived by converting the value of the trade expressed in the currency of each East European country to rubles and then to dollars at the prevailing foreign exchange rate. Exports are on an f.o.b. basis.

Imports are f.o.b. except for Hungary, which is on a c.i.f.

basis.

Including data for Albania, China, Cuba, Mongolia, North Korea, Vietnam, and Yugoslavia.

<sup>&</sup>lt;sup>a</sup> Domestic currency converted into US dollars at the exchange rate prevailing at time of transactions. Exports are change rate prevailing at time of transactions. Exports are on an f.o.b. basis. Trade with the Communist countries was derived by converting the value of the trade expressed in the currency of each East European country to rubles and then to dollars at the prevailing foreign exchange rate.

US dollar rate understates the value of trade. East Germany converts West German marks into East German marks at parity, but actually the East German mark is worth less than the West German mark.

b Preliminary.
c The official West German deutsche mark/US dollar rate
was used to convert intra-German trade in East German
marks to US dollars because using the East German mark/

<sup>&</sup>lt;sup>a</sup> Exports are on an f.o.b. basis; imports are on a c.i.f. basis. Cuban trade with non-Communist countries is based on hard currency world prices while its Communist country trade uses soft currency negotiated prices which are fre-

quently subsidized in Cuba's favor and do not reflect real market values. The result is a more favorable global trade balance than if Cuba conducted all of its trade at world market prices.

c Preliminary.

<sup>&</sup>lt;sup>b</sup> Including data for China, Mongolia, North Korea, and Vietnam.

a Unless otherwise indicated, data are for crude oil and exclude natural gas liquids, shale oil, natural gasoline, and synthetic crude oil.
b Including shale oil.

Including about one-half of neutral zone production, which amounted to 371,000 barrels per day in 1981.
 Including small quantities of synthetic crude oil.

Approved For Release 2007/01/05 . GIA-RDP65-00656R000100040001-8

Data include only gas from natural gas wells and associated gas from petroleum fields.
 Data are for net production—that is, for gas actually

A much smaller share of total production in the USSR is believed to be used for reinjection.

collected and utilized as fuel or raw material. They exclude gas used for reinjection, as well as gas flared, vented, or wasted, whether or not it has been processed for the extraction of natural gasoline.

c Data for the United States are in terms of net marketed production. Data for the USSR refer to gross production less losses and waste. US gross production (less losses and waste), which includes gas reinjected in order to maintain reservoir pressure, would be as follows (in billion cubic feet): 1960 1965 1970 1973 1974 1975

<sup>14,510 17,660 23,790 24,070 22,850 21,100</sup> 

<sup>1977 1978 1979 1980</sup> 21,100 21,310 21,400 21,600 20,900

d Twelve months ending 30 June of the stated year.
Including gas used for repressuring and gas wasted.
Gross production.

Hard Coal Production a

Unless otherwise indicated, data are for net production of anthracite and bituminous coal.
 Twelve months ending 30 June of the stated year.
 Including brown coal.

d Excluding data for Northern Ireland.
Including low-quality coal at its hard-coal equivalent.
Raw production. Including a negligible amount of brown

<sup>&</sup>lt;sup>a</sup> Data are for total (gross) production at generating centers and therefore include transmission losses and station use (see footnote <sup>b</sup>).

the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the gross production. Therefore, no at

tempt has been made to adjust the net production for hydroelectric power.

c Beginning in 1980, data are for public utilities only.

b Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.5 percent

a All plants for both public and industrial use. Unless otherwise indicated, data are as of the end of the year.
b Beginning in 1981, data are for public utilities only.
c Data are for the year beginning 1 April of the stated

d Capacity as of 31 March 1961.
Gross capacity.
Including 410,000-kW capacity in industrial plants not linked to the national grid system.

<sup>&</sup>lt;sup>a</sup> Unless otherwise indicated, data are for the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites.

The metal content of the ore in the OECD countries follows: United Kingdom and West Germany, 28-31 per-

cent; Luxembourg, 25 percent; France, 32 percent; United States and Canada, 61-62 percent; and Australia and Sweden, 60-65 percent.

c Excluding manganiferous iron ore containing 5 percent or more of manganese.

d Twelve months ending 30 June of the stated year.
Shipments.
The metal content of the ore in the other countries ranges from 60 percent to 68 percent.

Unless otherwise indicated, data are for oven and beehive coke and exclude breeze coke.
 Net production, excluding coke consumed by coking

plants.
c Including breeze coke.

d Including electrode coke but excluding low-temperature

coke.

c A large part of this coke is produced in gas plants and is used with high-quality coke in charging blast furnaces.

a Unless otherwise indicated, data are for smelter production of lead produced from domestic and imported ores and concentrates, excluding all metal produced from scrap (secondary metals).
b Excluding refined lead produced from imported base bullion.

c Including lead bullion.
d Including secondary metal, remelted lead, and alloys.
Lead bullion from imported ores and concentrates.
Probably including some secondary metal.

Data are for noncellulosic fibers whether made of natural polymers, which are based on materials such as casein or groundnuts, or made of synthetic polymers, which are based mostly on coal or petroleum. Data exclude waste, glass fibers, and rubber fibers.

b "Delivery weight," approximately 3 percent less than "actual weight," prior to mid-1967. Thereafter, approximately one-half of production is reported as "actual weight."

<sup>&</sup>lt;sup>a</sup> Unless otherwise indicated, data are for steam and hydraulic turbines. Most production of turbines is for use in matched sets with generators for production of electricity. In addition, turbines are produced in single units for many purposes, including direct industrial drives, marine propulsion, and pipeline transmission.

b Shipments of units of 4,000 kilowatts and larger. Data are available only for turbines produced in integral units together with generators. Therefore, data for turbines and generators for the United States are assumed to be the same. Some turbines are produced in single units, but no data are available on this production.

generators is believed to be negligible in most instances.

• Shipments of units of 4,000 kilowatts and larger.

<sup>&</sup>lt;sup>c</sup> Generators for steam and gas turbines only. <sup>d</sup> Thousand kilovolt amperes.

c Including a small number of gas turbines.

d Steam turbines only.

e Steam turbines of more than 500 kilowatts only.

<sup>a</sup> Data are for the following products, where they are produced: barley, corn, oats, rice, rye, sorghum, and wheat. <sup>b</sup> Including miscellaneous grains and pulses. Measured in bunker weight, that is, gross output from the combine which includes excess moisture, unripe and damaged kernels, weed seeds, and other trash. For comparison with US or other

country grain output, an average discount of 11 percent should be applied.

Including miscellaneous grains.

Including pulses.

Including soybeans, broad beans, and field peas. Tubers

- are included on a grain equivalent basis of 5 metric tons of

tubers to 1 metric ton of grain.

f Data reflect only rice production and government collections of corn; total production of grains is somewhat higher. Including corn, manioc, sweet postatoes, and soybeans on a paddy-equivalent basis (1 ton paddy=0.63 tons of grain or rice).

<sup>&</sup>lt;sup>a</sup> Unless otherwise indicated, data are for beet sugar produced in the calendar year. Data are given in terms of the raw value of centrifugal sugar. Refined sugar is equal to approximately 92 percent of raw sugar weight. Centrifugal, as distinguished from noncentrifugal, sugar includes cane

and beet sugar produced by the centrifugal process and is the principal type of sugar moving in international trade. b Including cane sugar. c Including Puerto Rico.

d Cane sugar only.

c Including raw cane sugar imported for refining.
Raw cane sugar of 96° polarization. Data are for crop years ending 30 June of the stated year.

a Data are on a carcass weight, bone-in basis, and are for beef, veal, buffalo, pork, mutton, lamb, goat, and poultry where they are produced. Unless otherwise indicated, data exclude horsemeat, rabbit, game, edible offal, and lard. b Non-Communist country data include meat from animals imported for slaughter.

c Including horsemeat.

d Data are on a slaughter weight, bone-in basis, and include a Data are on a slaughter weight, bone-in basis, and include horsemeat, rabbit, game, edible offal, and slaughter fats in addition to the meats listed in footnote a above. Slaughter weight is roughly 3 percent less than carcass weight because it excludes kidney and leaf fat. As a result of this broader

coverage, the meat producton data for the USSR and Eastern Europe are above the level attained if the coverage was limited to that shown for other countries.

• Data are for deboned beef, pig bellies, and fresh poultry for

state production only.

<sup>&</sup>lt;sup>a</sup> Including land under temporary crops, gardens, fallow or idle land, and permanent crops such as orchards and vineyards, unless otherwise indicated.
<sup>b</sup> Data are "fertilizer years"—in general, the year beginning

<sup>1</sup> July.

Including phosphate rock; excluding livestock phosphates.
 Data indicate the quantity supplied to agriculture.
 Arable land is total area less pasture and hayland.

e Sown area is used because of extensive multiple cropping.

a Excluding urban systems; plantation, forest, mine, industrial plant, underground, funicular, and cable railroads; and short lines of little importance. Unless otherwise indicated, data are for the state or principal railroad system and include all goods and livestock carried during the calendar year and exclude service traffic, mail, and nonrevenue government stores. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign

trade freight traffic carried through more than one country, however, is counted in each country. Data for the United States include express and mail and are specifically for revenue and nonrevenue freight traffic for a more realistic comparison with Soviet methods of reporting.

b Including secondary or private railroads operating as com-

mon carriers.

d Excluding data for Northern Ireland.

e Including mail and passenger baggage. Data are for the year beginning I April of the stated year.

f Including service traffic.

lincluding Namibia.

c Excluding livestock.

a Data exclude light aircraft. No attempt has been made to standardize comparisons of the US and Soviet aircraft inventories in terms of capacity for passenger-cargo carrying and/or range capability.

<sup>•</sup> Express, Treignt, and man traine.
• Revenue ton-kilometers flown on scheduled service of certificated route air carriers.
• Japan Air Lines data only.

d Japan Air Lines and Japan-Asia Airways.
Excluding airlines based in the UK territories and dependencies.

b Large aircraft only. Data for commuters and all cargo operators not available prior to 1979. This data refers to certificate route carriers, supplementals, and commercial operators.

c Data basically represent the inventory of Aeroflot—the Soviet civil airline.

<sup>&</sup>lt;sup>a</sup> Units of two, four, or more axles. Unless otherwise indicated, data refer to both state and private ownership of cars used on the state or principal railroad system. Data are as of the end of the year. Because of the lack of comparability in data, totals for the OECD and the Communist countries are omitted.

b Units of four or more axles.
c Including secondary or private railroads operating as common carriers.

de Excluding privately owned tank cars and including data for Northern Ireland.

The majority are four-axle units.

<sup>&</sup>lt;sup>a</sup> Ships of 1,000 gross register tons (GRT) or more. Data are as of the end of the year. Data for the non-Communist countries include all combination passenger and cargo ships, whereas, unless otherwise indicated, those for the Communist countries exclude passenger ships that have small cargo capacities.

b Excluding ships operating only on the Great Lakes and US-owned ships flying the Liberian, Panamanian, and other "flags of convenience."

<sup>&</sup>lt;sup>c</sup> Excluding Greek-owned ships flying the Liberian, Panamanian, and other "flags of convenience."

d Excluding the Caspian Sea Fleet passenger ships and vessels subordinate to the Ministry of the Fishing Industry. e Before August 1968, a few additional Bulgarian-owned ships were operated under the flags of non-Communist countries.

FUntil March 1967, an undetermined number of Czechoslovak-flag ships were jointly owned with China.

8 Including some ships flying the Polish flag but under the control of the Chinese-Polish Shipbrokers Corporation. At the end of 1980, there were 12 of these ships.

1 Data include a number of ships jointly owned by the Chinese-Albanian Joint Stock Shipping Company.

1 Including North Korean, Vietnamese, and Kampuchean
