no. 1] p. 59-63.

DESCRIPTORS: *Magnesium, *Phosphates, *Fertilizers,
Sulfuric acid, Sulfates, Calcium, Chemical reactions,
Tests.

By adding $MgSO_4$ alone to phosphate rock before calci-
nation, an incompletely defluorinated product of low
citric solubility is obtained. If H_2SO_4 alone is added to
the calcining charge a large excess is required to bring
about complete decomposition of the phosphate rock
because of the tendency of H_2SO_4 to escape before heat-
stable compounds are formed. Even if the rock is
decomposed the product tends to be high in calcium
