infections.

The actinolysate introduced intracutaneously shows a
good therapeutic effect in the majority of forms of
actinomycosis in the presence of a clear skin-allergy
reaction in the patient. The proposed method gives not
only a good therapeutic effect, but also good cosmetic
results. (Author)

DESCRIPTORS: *Nickel alloys, *Iron alloys, *Molyb-

treatment.

Changes in permeability and electrical resistance due
to additional heat-treating were investigated in a cer-
tain molybdenum-permalloy alloy. As a parallel phe-
nomenon of the well known increase in permeability
there was found an increase in cold-resistance and de-
pendence of the hot-resistance on the rate of cooling
or the holding time at constant temperature. The
time-temperature law of the change in resistance
