NOTE ON THE DISTRIBUTION OF WEAK POINTS
IN THE YARNS. 6 Nov 61 [10]p. 4 refs.
Order from SLA \$1.10

62-14307

Trans. of Spanish language article from unidentified
source, n.d., p. 272-275.

DESCRIPTORS: *Threads, *Textiles, Tensile prop-
erties, Rupture, Dynamometers, Tests.

The following conclusions are drawn from the ex-
periments described. There is a relationship of the
type $n^{1/3} = tT-b$, (in which n = the number of rup-
tures within the tested length, and T is the applied
tension,) between the number of breaks and the ten-
sion applied to the plate of the Blanxart dynamometer.
The distribution of the lengths between successive
ruptures after an adequate transformation of the
abscissae follows the terms of the modified Poisson
distribution in which the values of variation is taken
into account. (Author)

THE ELECTRICAL CONDUCTIVITY OF SOLID DIS-
PERSOIDS. 4 May 61 [13]p. 7 refs. 61-16531
Order from SLA \$1. 60

Trans. of Kolloid-Z[eitschrift] (West Germany) 1949,
v. 112 [no. 1] p. 60-66.

DESCRIPTORS: *Colloids, *Electrical conductance,
*Semiconductors.

Mixtures of disperse conductors or semiconductors with
insulating binders show, over a narrow concentration
range, a change in electrical resistance of 10^6 to 10^{12} .
This critical concentration range moves to lower values
as the specific sediment volume of the disperse phase
increases. In the critical concentration range, the re-
sistances depend on voltage and, possibly, also on pres-
sure. By forming the solidifying dispersing agent in an
electric field, direction-dependent resistances are pro-
duced. (Author)
