DESCRIPTORS: *Skin, Wounds and Injuries, *Ra-
diation sickness, *Necrosis, Radiation effects,
*Healing.

The development of a focus of radiation necrosis is
characterized by a slow tempo, the absence of a clear
cut picture of inflammation, and the development of
necrotic changes in the zone of injury. At the time of
formation of a focus of radiation necrosis, ready-
formed layer of proliferating epidermis and young
connective tissue are present at its edges and base. A

The purpose of this study is to construct a synthetic
seismogram, considering only simple reflections and
triple reflections, where the second reflection may take
place at the surface or in depth, and furthermore,
limiting oneself to those which bring a substantial con-
tribution. The problem consists in determining the
limit value H of the coefficients of reflection below
which their contribution, in the form of triple reflec-
