Trans. of Zhurnal Eksperimental'noy i Teoreticheskoy
Fiziki (USSR) 1946, v. 16, no. 11, p. 990-995.

The explosion luminescence of three liquid explosives-
methyl nitrate, nitroglycol and nitroglycerine, has
been investigated in water envelopes. It has been
established that the radiation luminescence has a tem-
perature and spectral distribution of energy that fol-
lows the Wien formula. The temperatures found
experimentally are lower than those derived theoreti-
cally. (Author)
