Papers presented at a conference sponsored by the USSR Academy of Sciences Institute of Microbiology January 1960 are summarized. Live vaccines can be developed by adaptation of microorganisms to specific nutrient substrata. Cold-resistant and thermophilic yeasts have been proved to be of practical value in wine making under the severe climatic conditions of Central Asia. Continuous cultivation of yeasts in a renewable medium in which the alcohol concentration is gradually increased is proposed for (Biological Sciences--Microbiology, TT, v. 5, no. 9)
