The calculation of diffusion coefficients in a lattice
necessitates the knowledge of a correct method of
weighting the free paths of the different constituents.
An unambiguous definition of this weighting method is

Amines, Hydroxides, Hydrochloric acid, Propanols.

Ethylenimine readily condenses with the amino-
epoxides to form aminohydroxyethylenimines. A
molecule of hydrochloric acid will yield the hydro-
chloride of the amine while leaving the imine ring
intact. (Author)

This study furnishes the following results: (1) The birefringence disappeared exponentially with a time of relaxation $1/6 D$ (D being the constant of diffusion of rotation of molecules) independently of the initial conditions. (2) The law of establishment of the field depends on the nature of the couple of orientation and there can (Physics--Molecular, TT, v. 7, no. 1) (over)
