 Sep 60 [7]p. (1 fig. omitted) 5 refs. RTS 1490.  
 Order from LC or SLA mi\$1.80, ph\$1.80 61-13226

Trans. of Zavodskaya Laboratoriya (USSR) 1957, v. 23, no. 3, p. 316-318.

Experiments showed that the transfer of chromium atoms in any solvent metal takes place at a considerably greater rate in the grain boundary portions. The self-diffusion of chromium also proceeds preferentially along grain boundaries. The coefficients of self-diffusion of chromium for temperatures of 1100, 1200 and 1350°C were calculated, and the activation energy of the process (Q) was also determined separately for grain bodies and grain boundaries. For grain bodies  $Q = 76,000$ , and for the boundaries  $Q = 46,000$  cal/g atm.
