Order from SLA \$1.60 62-18566

DESCRIPTORS: Cathode ray tubes, *Electron guns,

*Diffraction analysis.

A description is given of an electronic gun for use in
diffraction analyzers and microscopes. Included are
results of measurements of the geometric definition of
the spot and the yield. The gun, used without a con-
denser, results at 45 kV a current density ten times
higher and a yield of about 20%, or 13 times higher
than that of the conventional gun without condenser.
The total consumption of high voltage current is
approximately equal to 40 A. (Author)

The ionization energy of molecules which have elec-
tron donor properties is determinable from the energy
h ν of an intermolecular electron band, for example
with trinitro benzene, chloranil, or iodine as acceptor.
This method is applied for the calculation of the ion-
ization energy of condensed aromatic hydrocarbons,
diphenylpolyenes, N-substituted anilines and other
aromatic amines. It is particularly applicable in
cases where the hitherto known experimental proce-
dures are not suitable. (Author)
